

Example Landowner Objectives Sections

Objectives Example 1

- A forest with a diversity of native plants that is free of invasive weeds
- A healthy forest that is resilient to insects, diseases, and climate change.
- Diverse, high-quality habitat that attracts a variety of wildlife.
- An unencumbered view of the Puget Sound.
- Healthy, productive soil.
- Minimal use of pesticides.
- A sustainable supply of firewood
- A beautiful forest to pass on to our heirs at some point in the distant future!

Objectives Example 2

- Periodic income from the growth and harvest of timber.
- High quality wildlife habitat.
- Healthy, protected sensitive areas including streams and wetlands.
- Old forest stand structure.
- A diverse, aesthetically pleasing understory with abundant berry-producing native plants.
- A well-maintained road that is in compliance with forest practices regulations.
- A cooperative relationship with neighboring landowners.

Objectives Example 3

- Periodic income from the growth and harvest of timber.
- A forest with a diversity of native plants that is free of invasive weeds.
- A healthy and highly diverse forest that is resilient to insects, diseases, and climate change.
- Diverse, high-quality wildlife habitat, especially for owls, eagles, crows, songbirds, elk, deer, and many other native wildlife.
- A diverse, aesthetically pleasing understory with abundant berry-producing native plants.

- Easy access to the forest for maintenance and recreation.
- An abundant supply of edible plants, berries, mushrooms, and maple sap for personal consumption.
- Forest ecology educational opportunities to non-profit sponsored tours, school groups and WSU Forest Stewardship Program field sessions.
- A forest that exemplifies science-based management practices.
- A forest that we can pass on at some point in the future in better condition than we found it.
