Introduction

About This Directory

The Washington State Consulting Forester and Silvicultural Contractor Directory is a compilation of forestry professionals around Washington State who provide the professional services to private forest landowners. The directory includes specific information for each of the professionals, including contact information, services provided, bonding and insurance information, experience, and counties served. Inclusion in the directory is voluntary. All information is provided by the forestry professionals themselves. This directory is also available as a searchable online database at <http://forestry.wsu.edu/consultingdirectory/>.

Disclaimer

The firms or individuals listed herein are engaged in forestland related work in Washington State. Consultants and contractors working for a private landowner do not represent or speak for Washington State University. Washington State University is not responsible for nor guarantees the quality, accuracy, or cost of the services provided by any of the consultants listed below. Information presented in this directory was provided by the individual service providers and is published on an “as-is” basis. Washington State University did not verify the validity of the information provided. The information was last updated on the date listed on the front of this directory.

How to get listed in this directory

If you would like to have your firm’s information added to, removed from, or updated in this directory, please contact Kevin Zobrist, Washington State University Extension Forestry at 6705 Puget Park Drive, Snohomish, WA 98296, 425-231-4524, or kevin.zobrist@wsu.edu. The directory is updated twice a year.

About Consulting Foresters

A consulting forester provides professional forest management services to landowners. These services may include management plan writing, timber sale administration, permitting, timber marketing, inventory and appraisal, property mapping, management advice, coordination of contractor services, and other tasks. The consultant’s role is to represent the interests of the landowner. As such, it is important for landowners to discuss their goals and objectives with the consultant.

When harvesting and selling timber, some logging companies and mills can provide professional services similar to those of a consultant. However, these professionals ultimately represent the interests of the timber buyers, which creates an inherent conflict of interest when also working for the timber seller (i.e., the landowner). The advantage of a consulting forester is that she or he is

independent and represents solely the landowner and thus is best able to pursue the best price for the timber and ensure that contracts protect the landowner from liability.

Consulting foresters range in expertise, experience, and approach. Consultant fees can also vary widely. Consultants may charge for their services in several different ways, such as an hourly rate or a percentage of timber sale proceeds (5 to 7% is common). Landowners should do some research to find the right forester to meet their needs. Talking to several different consultants and checking references can help landowners make the right selection. A reputable forester will be one who is liked and respected by landowners, loggers, and silvicultural contractors alike.

Examples of questions a landowner might want to ask when interviewing a forester include:

- What is your education and experience in forestry?
- What type of services do you offer?
- What is your philosophy toward forest use and land stewardship?
- How do you get paid?
- How far is your office from my property and do you charge per mile?
- Are you a Certified Forester or a member of a forestry professional organization?

About Silvicultural Contractors

A silvicultural contractor provides the labor and equipment to perform forest management tasks such as site preparation, tree planting, vegetation control, pre-commercial thinning, slash disposal, etc. Some companies provide both forestry consulting and silvicultural contracting services. A forestry consultant may arrange the services of a silvicultural contractor on behalf of a landowner, or a landowner may hire a contractor directly. As with consultants, landowners should do some research to find the right forester to meet their needs. This may include talking to multiple contractors, asking about credentials, checking references, and asking whether the contractor is bonded and/or carries Liability insurance.

For certain reforestation and thinning activities, a contractor may be required to have a Farm Labor Contractor License. A landowner who knowingly hires an unlicensed farm labor contractor may be liable for unpaid wages, damages, workers' compensation premiums, and fines. The Washington State Department of Labor and Industries maintains a list of licensed farm labor contractors that is updated monthly. Farm Labor Contractor Licenses must be renewed annually (Washington State Department of Labor and Industries n.d.). For more information on farm labor contractor requirements and to verify a Farm Labor Contractor License, visit the Washington state Department of Labor and Industries website at <https://lni.wa.gov/workers-rights/farm-labor-contractors/farm-labor-contractor-licensing>.

Business Description and Remarks

Northwest Natural Resource Group is a think-learn-and-do tank of ecological forestry. We advance the state of knowledge about ecological forestry, spread the word about its benefits and feasibility, and help landowners put it into practice on their own forests. We work with landowners across more than 200,000 acres of Oregon and Washington — from family forests and youth camps to land trusts and municipalities — to help them steward, certify, and carefully harvest their forests.

Services Provided

- Forest management advice
- Forest management plan writing
- Forest inventory/appraisal/timber cruising

Definitions

Common acronyms

ACF

Association of Consulting Foresters – a professional association for consulting foresters that requires members to meet certain education requirements and professional standards. For more information see the ACF Website: <https://www.acf-foresters.org/>.

ATFS

American Tree Farm System – an independent forest certification organization that provides third-party certification of forest management practices. Landowners participate voluntarily, must conform to specified sustainability standards, and must be periodically inspected to be certified. In Washington, ATFS is administered by the Washington Tree Farm Program. For more information see the ATFS website at <https://www.treefarmssystem.org/> or the Washington Tree Farm Program website at <https://www.watreefarm.org/>.

CCF

Candidate Certified Forester – a professional certification by the Society of American Foresters (SAF). Candidate Certified Foresters must meet certain education and professional requirements and must pass an exam. Foresters who do not yet have the minimum number of years of experience to be a Certified Forester can be a Candidate Certified Forester. For more information see the SAF certification website at https://www.eforester.org/Main/Certification_Education/Main/Certification/Professional_Dev_Home.aspx

CF

Certified Forester – a professional certification by the Society of American Foresters. Certified Foresters must meet certain education and professional requirements, pass an exam, and must meet a minimum number of years of experience requirement. For more information see the SAF certification website at https://www.eforester.org/Main/Certification_Education/Main/Certification/Professional_Dev_Home.aspx

CUT

Current Use Taxation – a property tax option in Washington where forestland is taxed based on the economic value of its current use for forestry as opposed to its regular market value that may be reflect other uses like development. Examples of CUT in Washington are Designated Forestland, Timber Land, and Open Space Land. For more information see the Washington State Department of Revenue Current Use website at <https://propertytax.dor.wa.gov/Aspx/CurrentUse.aspx/>.

DFL

Designated Forestland – a current use taxation program in Washington for land that is primarily used for the growth and harvest of timber and meets other state requirements (Washington State Department of Revenue 2017a).

DNR

Washington State Department of Natural Resources – the state agency that, among other things, regulates forest practices on private lands. For more information, see the DNR website: <https://www.dnr.wa.gov/>.

DOR

Washington State Department of Revenue – the state agency that, among other things, collects forest-related taxes like the Forest Excise Tax and sets land values annually for properties enrolled in certain current use taxation programs. For more information, see the DOR website: <https://dor.wa.gov/>.

FET

Forest Excise Tax – a tax due to the Washington Department of Revenue when selling timber. For more information, see the DOR Forest Tax website at <https://dor.wa.gov/taxes-rates/other-taxes/forest-tax>.

FPA

Forest Practices Application – A form that must be submitted to the Washington Department of Natural Resources to obtain a permit to harvest timber or do other regulated forest practices. For more information see the DNR Forest Practices website at <https://www.dnr.wa.gov/programs-and-services/forest-practices/review-applications-fpars/forest-practices-forms-and>.

FSC

Forest Stewardship Council – an independent forest certification organization that provides third-party certification of forest management practices. Landowners participate voluntarily, must conform to specified sustainability standards, and must be periodically inspected to be certified. For more information, see the FSC United States website at <https://us.fsc.org/en-us>.

GIS

Geographic Information Systems – sophisticated computerized mapping programs.

GPS

Global Positioning System - Electronic devices that use satellite signals to pinpoint where you are on the earth.

Inc

Incorporated – the company is a corporation, a legally-defined type of business entity (Mathias n.d. (a)).

ISA

International Society of Arboriculture – a professional association for arborists. Arborists can become Certified Arborists through ISA if they meet certain educational and professional requirements. For more information, see the ISA website at <https://www.isa-arbor.com/>.

LLC

Limited Liability Company – a legally-defined type of business entity that limits the owners' personal responsibility for the liabilities of the company (Fishman n.d.)

Ltd

Limited – indicates that the company is one of the legally-defined types of business entities that limits the owners' personal responsibility for the liabilities of the company (Mathias n.d. (b)).

NRCS

Natural Resources Conservation Service – a federal agency within the USDA that provides conservation-related financial assistance, technical assistance, and other resources to farmers, ranchers, and forest owners. For more information see the NRCS website at <https://www.nrcs.usda.gov/>.

PBRs

Public Benefit Rating System – a type of open space program available in some counties that offers property tax reductions for maintaining priority open space features (Washington State Department of Revenue 2017 (b)).

PCT

Pre-commercial thinning – a type of thinning in which the trees removed are not sent to a mill because they do not have commercial value.

SAF

Society of American Foresters – a professional association for foresters. Foresters can become Certified Foresters (CF) or Candidate Certified Foresters (CCF) through ISA if they meet certain educational and professional requirements. For more information, see the SAF website at <https://www.eforester.org/>.

TSP

Technical Service Provider – NRCS-approved service providers. Some activities that landowners can receive financial assistance from NRCS for must be done by a TSP. For more information see the NRCS TSP website at <https://www.nrcs.usda.gov/wps/portal/nrcs/main/national/programs/technical/tsp/>.

UAV

Unmanned aerial vehicle, also called a drone.

USDA

United States Department of Agriculture – a federal agency.

WCLA

Washington Contract Loggers Association – a professional association for people in the logging industry in Washington. For more information see the WCLA website at <http://loggers.com/>.

WFFA

Washington Farm Forestry Association – a forest landowner association in Washington. For more information see the WFFA website at <https://www.wafarmforestry.com/>.

WUI

Wildland urban interface – the transition zone between developed and undeveloped areas (U.S. Fire Administration n.d.).

Forestry Service Descriptions

Appraisal

Measuring the volume and quality of timber to determine how much it would be worth if harvested.

Brush/slash disposal

This is the removal or breaking down of large woody debris that is left behind after a natural disaster or implementation of a management practice. The disposal can take place in the form of burning, chipping, or moving it off the property for another use.

Drone services

These services include the use of an unmanned aerial vehicles (UAV), also called a drone, to do aerial photography or do remote sensing, which is the collection of tree data by plane or satellite.

Forest inventory

This technique quantifies what you have in your forest and reveals insights into species composition, tree density, tree volume, wildlife habitat, forest health, and how the forest changes over time.

Forest management advice

Assistance in identifying the best management options that will meet the objectives of the landowner, while following the forest practice laws.

Forest management plan writing

This service uses the landowner's objectives to formulate a written plan for the current and future management of an entire forest property. The forest management plan should include the ownership objectives, property description, and the steps to achieve those objectives and protect public resources (water, wildlife, etc.) given the property's current conditions. The plan may also meet part of the eligibility requirements for third party recognition, cost share programs, and property tax reductions.

Forest practices permitting

Some management activities (harvesting timber, building or repairing forest roads or culverts, etc.) require a Forest Practices Permit issued by the Washington Department of Natural Resources, and/or other municipal permits. Permitting services include identifying and applying for all the necessary permits for a project.

Forestland security consulting

This service provides techniques on reducing trespassing, dumping, vandalism, timber theft, off-road vehicles, illegal drugs, etc. on your forest property.

Fuels reduction

Removal or treatment (e.g., chipping, prescribed burning) of excessive vegetation and down woody debris to decrease the risk of damage from wildfire.

GIS mapping

A Geographic Information System (GIS) is a computer system for relating data to a position on the earth's surface. Using this system, you can map the location of properties, geographic features, trees, management boundaries, inventory plots, etc.

Hazard tree assessment

Assessment of how sound a tree is and the likelihood of that tree falling due to root disease, internal decay, or another factor. Hazard tree assessment is typically done by an arborist near homes,

buildings, roads, trails, and camping sites where a falling tree would pose a safety hazard to people or structures.

Invasive species identification and control

Identification and removal of aggressive, non-native plant species, including noxious weeds, which cause a reduction in forest health, productivity, and native vegetation.

Non-timber forest products

These are all commodities or services that are produced in the forest such as edible berries, floral greens, mushrooms, resins, medicinal plants, and pinecones. Consultants offering this service will provide advice on cultivating, harvesting, and marketing these products.

Pre-commercial thinning

Removal of the slower-growing, weaker trees in a forest stand in order to re-allocate resources to improve the growth of the remaining trees. Trees cut in this process are too small and/or too poor in quality to sell and are usually left on the ground to rot in place.

Prescribed burning

The controlled application of fire to a landscape in order to reduce excessive vegetative and woody material, maintain habitats, add nutrients back to the soil, and stimulate plant biodiversity and regeneration. The application of fire is applied by a team of fire control experts under a specific set of weather conditions. This practice typically requires a permit.

Property surveying

An assessment of property lines, usually to determine the exact location of the property boundary and amount of land owned.

Reforestation/tree planting

Planting of trees in an area that has been harvested or otherwise does not have trees.

Riparian management and alternate plan application

Management of vegetation next to a water feature (pond, stream, wetland, etc.). An alternate plan allows landowners to deviate from the standard forest practices rules for riparian buffers if the landowner can show that the alternate plan will protect public resources as well as or better than the standard rules.

Road maintenance

Regular upkeep of forest roads to meet the requirements of forest practice rules. Maintenance can include grading, cleaning culverts, re-rocking roads, and installing water bars.

Site preparation – chemical

The process of getting an area ready for planting trees. In this process herbicides are used to reduce the shrubs and grasses that would compete with newly planted trees.

Site preparation – mechanical

The process of getting an area ready for planting trees. In this process machinery, hand pulling, and/or cutting is used to reduce the shrubs and grasses that would compete with newly planted trees.

Timber cruising

See forest inventory above.

Timber sale management/marketing

Overseeing of the process of selling trees from your property. The process includes obtaining permits, laying out the harvest boundary, identifying trees to be cut, contract writing, hiring and overseeing the loggers, marketing the trees for highest value, and managing post-logging site preparation and replanting.

Trail/boardwalk construction

Planning, layout, and construction of a foot trail or boardwalk.

Vegetation control/release – chemical

Using herbicides to remove unwanted vegetation that is heavily competing with recently planted trees. Vegetation control/release is typically done a few years after trees are planted to help them establish in a stand more quickly.

Vegetation control/release – mechanical

Using machinery, hand pulling, or cutting to remove unwanted vegetation that is heavily competing with recently planted trees. Vegetation control/release is typically done a few years after trees are planted to help them establish in a stand more quickly.

Wildlife damage control (bear, beaver, porcupine, etc.)

Advice on management techniques to decrease the damage to trees, property, and other plants as a result of wildlife activities.

Wildlife habitat enhancement

Advice on management techniques that improve habitat quality for one or more species of wildlife.
