MAYVIEW SPRING WHEAT - 2006 WSU VARIETY TESTING DATA

- 1. 2006 Spring Wheat yield data from the WSU Variety Testing nursery at the Mayview location averaged 39.2, 40.3, and 38.1 bu/ac for soft white spring, hard white spring and hard red spring wheat, respectively. The 2006 spring wheat average YIELDS were about equal to the historical 3-yr average in the soft white market class but 5%-10% lower in the hard white and hard red spring market classes, respectively. NOTE: The Mayview nursery was located in Garfield County approximately 25 miles northeast of Pomeroy, WA on the Tramway Rd. This nursery overlooks and is on what is called the 'breaks' of the Snake River, approximately 10 miles SE of Lower Granite Dam. The nursery is in a 16"-20" rainfall region. (Roger & Randy Koller farm).
- 2. This nursery was **recrop seeded on** 27 April 2006 into winter wheat stubble with soil moisture within an inch of the surface. Throughout the growing season this was a nice, even stand.
- 3. **YIELD RANKINGS** among varieties within market classes bounced around a little when comparing with 3-yr and 5-yr historical yield rank patterns. This is another one of the nurseries that performed near average even with the up-and-down weather patterns thrown at it during the growing season.
- 4. **TEST WEIGHT** average values across all three market classes were slightly off this year and had a range of 58.3 to 58.9 lbs/bu. The dry/heat stress periods during grain fill undoubtedly resulted in lower test weights for many varieties/experimental lines.
- 5. **GRAIN PROTEIN** values averaged 12.4%, 13.8% and 15.4% for the soft white, hard white and hard red spring market classes, respectively.
