Walla Walla Spring Barley – Preliminary Data

1. Grain yield in the Walla Walla spring barley trial averaged 5310 lbs/acre, 510 lbs/acre higher than the 5 year average at this location. The Walla Walla trial was located about 8 miles northeast of Walla Walla, WA (G. Smith, cooperator).
2. This nursery was seeded on 22 April, 2012 following winter wheat. Seed was placed at a 90 lbs/acre seeding rate using a plot drill equipped with double-disc openers set on 6-inch spacing. Base applied fertilizer was 120 lbs N/acre and a soil test showed 106 lbs N/acre available. Spring seeding and establishment conditions were favorable.
3. Yields ranged from 3840 lbs/acre to 6090 lbs/acre. Yield values within the LSD range of the highest yield are shown in bold and 5 of the 30 entries are in this top group. ‘Lenetah’ was the highest yielding named variety and also the highest yielding over 5 years at this location. All entries were 2-row and hulless entries are listed in italics.
4. Test weights averaged 54.4 lbs/bu and ranged from 51.2 to 62.4 lbs/bu with the highest values produced by hulless cultivars. Grain protein was high averaging 12.4% and plant height averaged 36 inches.
