### Horse Heaven Hard Spring Wheat - Preliminary Data

1. Grain yield in the 2012 Horse Heaven hard spring wheat trial averaged 15 bushels/acre, 10 bushel/acre lower than the 5-year average. The Horse Heaven nursery was located about ten miles southwest of Prosser, WA (J. Moon, cooperator).
2. This nursery was seeded on 23 March, 2012 following fallow. Seed was placed at a 60#/acre seeding rate using a double-disk plot drill set on 6-inch spacing. Base fertilizer was 50#N/acre and soil test analysis showed ample N available to meet the hard protein target at projected yield levels. Spring seeding conditions were variable and establishment was not uniform.
3. Yields ranged from 12 bu/acre to 19 bu/acre. Yield values within the LSD range of the highest yield are shown in bold and 7 of the 30 entries are in this group. 'Hollis' was the highest yielding in 2012 and 'Scarlet' were the highest yielding over 5 years at this location. Fungicide was applied at herbicide timing for stripe rust prevention.
4. Test weights averaged 60.2 lbs./bu and ranged from 58.0 to 61.9 lbs./bu. Grain protein averaged 16.5% with a range of 15.4 to 17.6%. The average plant height was 23 inches with no lodging.
