Horse Heaven Soft White Spring Wheat - Preliminary Data

1. Grain yield in the 2012 Horse Heaven soft white spring wheat trial averaged 18 bushels/acre, 11 bushel/acre lower than the 5-year average. The Horse Heaven nursery was located about ten miles southwest of Prosser, WA (J. Moon, cooperator).
2. This nursery was seeded on 23 March, 2012 following fallow. Seed was placed at a 60#/acre seeding rate using a double-disk plot drill set on 6-inch spacing. Base fertilizer was 50#N/acre fall applied. Spring seeding conditions were variable and establishment was not uniform.
3. Yields ranged from 13 bu/acre to 22 bu/acre. Yield values within the LSD range of the highest yield are shown in bold and 3 of the 24 entries are in this group. 'Louise'-G2 was the highest yielding and is Louise with 2oz./100lbs. seed of Gaucho® insecticide seed treatment. Louise at the standard seed treatment rate (0.75oz./100lbs. seed), was 2 bu/acre less, and Louise-0W without insecticide was 5 bu/acre less than Louise-G2. 'JD', Louise, and 'Diva' were the highest yielding over 5 years of results at this site. Fungicide was applied at herbicide timing for stripe rust prevention.
4. Test weights averaged 59.8 lbs./bu and ranged from 58.2 to 61.2 lbs./bu. Grain protein averaged 14.2% with a range of 13.2 to 15.9%. The average plant height was 23 inches with no lodging.
