### Creston Soft White Winter Wheat - Preliminary Data

1. Grain yield in the 2012 Creston soft white winter wheat trial averaged 79 bushels/acre, 34 bushels/acre lower than the 5-year average yield. The Creston nursery was located about seven miles northwest of Creston, WA (B. Bendy, cooperator).
2. This nursery was seeded on 27 September, 2011 following fallow. Seed was placed at an 85#/acre seeding rate using a plot drill equipped with double-disc openers set on 6-inch spacing. Base fertilizer was applied pre-plant. Fall seeding conditions were good as were emergence and stand establishment.
3. Yields ranged narrowly from 66 to 91 bushels/acre. All yield values within the 10% LSD range of the highest yield are shown in bold. 'Tubbs 06' was the highest yielding entry in the trial, and 7 of the 48 entries were within the top LSD range. 'Xerpha' was the top yielding entry across five years of results at this location. Stripe rust potential was low at this location and fungicide was applied on 26 May with the herbicide.
4. Test weights were very good averaging 61.7 lbs./bu and ranged from 59.3 to 63.7 lbs./bu. Grain protein was high averaging 12.1% and ranged from 10.7 to 13.4%. Plant height averaged 35 inches and there was no lodging.
