^a SWW = Soft White Winter Wheat, WC = Winter Club.

^b Rating reflects the likelihood of good emergence under adverse planting conditions using deep furrow planting from 1 to 9, where 1 = highly likely and 9 = very unlikely.

^c Rankings from 1-9, 1 = highest survival, 9 = lowest survival.

^d T = Tolerant, TMT = Tolerant- Moderately Tolerant, MT = Moderately Tolerant, MTS = Moderately Tolerant-Susceptible, S = Susceptible

^e Rating from 1 to 9, 1 = least likely to lodge, 9=most likely to lodge.

^f R = resistant, MR = moderately resistant, MS = moderately susceptible, and S =susceptible.

^g The high-temperature adult-plant (HTAP) resistance data were based on greenhouse tests. Unknown= Wheat the entry has HTAP resistance or not couldn't be determined as it was resistant to all tested races in the seedling stage. TBT= to be tested. Entries with the combination of Yr5 and/or Yr15 may not have HTAP resistance but their resistance should be highly effective as no races virulent to either of the genes are found in the US.

^h Rating reflects the degree of resistance and ranges from 1 to 9, where 1= highly resistant and 9= highly susceptible.

ⁱ MD= Most Desirable, D= Desirable, A= Acceptable, LD= Least Desirable

^j Limited winter survival rating based off single year of testing.

*SBWMV rating based on genetic marker.
