

# Snohomish County 4-H

## Stay Home, Stay Healthy

### Learning Tool for week of June 14<sup>th</sup>, 2020

Hello 4-H Community!

Have you ever thought of joining a robotics team? Maybe wondered what it would be like to build or program a robot? Well, here is your chance to explore some of those ideas and concepts that are involved in robot design, testing, and construction!

For Inspiration and Recognition of Science and Technology (FIRST) is a youth-serving organization whose mission is to “inspire young people to be science and technology leaders and innovators.” FIRST hosts a variety of learning and competitive events that allow youth to cooperatively compete (yes, it is possible!) with wonderful designs that their team creates. And yes, FIRST has some great tools and resources for families to use at home! Check out the [FIRST @ Home](#) page for lesson plans by age and grade, for remote learning resources, and for links to a variety of online content designed to expose youth to STEM learning, tools, and careers.

Happy learning!
