\*Percent seedling establishment, taken 6 weeks after planting, reflects the area that is covered by the germinated grass. Rated from 0 to 100%; 100 = complete ground cover

\*\*Genetic color rated once per year on a scale from 1 to 9; 9 = Dark green. Reflects the inherent color of the entry not chlorosis or browning caused by mower damage, disease, etc. Genetic color is rated when grass is **not** under stress.

\*\*\*Turfgrass quality rated monthly during the growing season on a scale from 1 to 9; 9 = Excellent turfgrass quality. This is a visual estimate integrating all factors (color, density, leaf texture, etc.) that contribute to turfgrass quality.

\*\*\*\*Spring greenup or relative rate of breaking winter dormancy rated from 1 to 9; 1 = dormant and 9 = green.

\*\*\*\*\*Leaf texture rated once per year on a scale from 1 to 9; 1 = coarse and 9 = fine leaf texture.

\*\*\*\*\*Rust: Leaf and/or stem rust (*Puccinia* spp.) was rated in the fall (August/September) on a scale from 1 to 9; 9 = resistant.
