

# Boot Brush Stations

## Available at No-Cost

WASHINGTON STATE  
UNIVERSITY

Boot brush stations are great for raising awareness about the impacts of introduced species and limiting the spread of seeds and microbes. Protect your lands by adding a boot brush station to a trailhead, community garden, or any other space where muddy footwear can carry seeds or microbes.

### Boot Brush Station Examples

Two types of boot brush stations are available for Northwest Tribes at no-cost. Signs with metal posts are 36in x 24in. Signs with wood posts are 24in x 18in. Signs on top are metal composite.

Signs can be co-designed and produced with any Tribal department, staff or community. Signs can highlight any priorities and be produced, and delivered to you at no cost.

24x18" sign

Wood Posts

Design Example

Signs can be co-designed to feature any space or species of concern to your community.
