WSU Urban Forest Health Lab

The WSU Urban Forest Health Lab is available as a resource for questions about tree health. It is located in Puyallup, Washington. The lab provides services such as testing for *Phytophthora* in plant, soil and waterway samples. It can also test for *Cryptostroma corticale*, the causal fungus of sooty bark disease on maples.

University of Idaho Parma REC Diagnostic Lab

The Department of Entomology, Plant Pathology and Nematology offers diagnostic services at the Parma and Idaho Falls Research and Extension centers.

Their labs are available to conduct many diagnostic tests and investigate the cause of plant problems on a range of hosts. They can also provide advice for disease management.
