Specific location where sample collected (address or sample site, and type of faucet): Kamiak 83

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes X No ____
Chlorine Residual: Total ____ Free 1.02

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
__ __ __ - __ __ __ __ __
Unsatisfactory routine collect date:
____/____/____
Chlorinated: Yes____ No____
Chlorine Residual: Total____ Free____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative ____ Constructions/Repairs ____ Other

LAB USE ONLY	DRINKING WATER RESULTS	LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /ml. E.coli ____ /100ml.
Total Coliform ____ /100ml. Fecal Coliform ____ /100ml.

SAMPLE INFORMATION

Sample collected by (name): Patterson

Specific location where sample collected (address or sample site, and type of faucet):
Stephen Center 180A

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☑ **Routine Distribution Sample**
Chlorinated: Yes X No ____
Chlorine Residual: Total ____ Free .07

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
___ ___ ___ . ___ ___ ___ ___ ___
Unsatisfactory routine collect date:
___/___/___
Chlorinated: Yes ____ No ____
Chlorine Residual: Total ____ Free ____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative ____ Constructions/Repairs ____ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

X ☑ **Satisfactory**
LAE

☐ **Replacement Sample Required**

Sample not tested because:

SAMPLE INFORMATION

Sample collected by (name): Patterson

Specific location where sample collected (address or sample site, and type of faucet):
Food Services 89

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes X No ____
Chlorine Residual: Total ____ Free .06

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
____ ____ ____ - ____ ____ ____ ____ ____
Unsatisfactory routine collect date:
____/____/____
Chlorinated: Yes____ No____
Chlorine Residual: Total____ Free____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative _____ Constructions/Repairs _____ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count _____ /ml. E.coli _____ /100ml.
Total Coliform _____ /100ml. Fecal Coliform _____ /100ml.

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes ☒ No ☐
Chlorine Residual: Total ____ Free .01

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
__ __ __ - __ __ __ __ __
Unsatisfactory routine collect date:
____/____/____
Chlorinated: Yes____ No____
Chlorine Residual: Total____ Free____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative _____ Constructions/Repairs _____ Other _____

LAB USE ONLY **DRINKING WATER RESULTS** LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory** LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count _____ /mL. E.coli _____ /100mL.
Total Coliform _____ /100mL. Fecal Coliform _____ /100mL.

Method Code: MICR – 2720	Date and Time Received: 12.9°C IL4 IMAR21 1320hrs.
Date Analyzed: 3/1/21 1618	Date Reported: 3/4/21
1 2 5 0 2 0 1 3 Sample Number (DOH number plus five digits)	Lab Use: MBC0020-43

SAMPLE INFORMATION

Sample collected by (name): P. Hanson

Specific location where sample collected (address or sample site, and type of faucet):
GWSP P40

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes X No ____
Chlorine Residual: Total ____ Free .03

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
____(Population of 1,000 or less)
Unsatisfactory routine lab number:
___ ___ ___ - ___ ___ ___ ___ ___
Unsatisfactory routine collect date:
___/___/___
Chlorinated: Yes ____ No ____
Chlorine Residual: Total ____ Free ____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from DWS

4. ☐ **Sample Collected for Information Only**
Investigative ____ Constructions/Repairs ____ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
82

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /mL E.coli ____ /100mL
Total Coliform ____ /100mL Fecal Coliform ____ /100mL

SAMPLE INFORMATION

Sample collected by (name): P. Hervin

Specific location where sample collected (address or sample site, and type of faucet):
Mott Pool 6 A

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes ☒ No ☐
Chlorine Residual: Total 1.3 Free ____

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
____(Population of 1,000 or less)
Unsatisfactory routine lab number:
____ ____ ____ ____ ____ ____
Unsatisfactory routine collect date:
____/____/____
Chlorinated: Yes____ No____
Chlorine Residual: Total____ Free____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from WFI's

4. ☐ **Sample Collected for Information Only**
Investigative ____ Constructions/Repairs ____ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
Use

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /ml. E.coli ____ /100ml.
Total Coliform ____ /100ml. Fecal Coliform ____ /100ml.

SAMPLE INFORMATION

Sample collected by (name): P. Hanson

Specific location where sample collected (address or sample site, and type of faucet):
LARC #11

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes X No
Chlorine Residual: Total ____ Free .07

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
Unsatisfactory routine collect date:
Chlorinated: Yes ____ No ____
Chlorine Residual: Total ____ Free ____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative ____ Constructions/Repairs ____ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
UAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /mL E.coli ____ /100mL
Total Coliform ____ /100mL Fecal Coliform ____ /100mL

Method Code: MICR – 2720

SAMPLE INFORMATION

Sample collected by (name): Patterson

Specific location where sample collected (address or sample site, and type of faucet): Van Doren 37

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ Routine Distribution Sample
Chlorinated: Yes X No 23
Chlorine Residual: Total ___ Free ___

2. ☐ Repeat Sample (after unsat. routine)
Distribution System
Source Groundwater Rule (GWR)
(Population of 1,000 or less)
Unsatisfactory routine lab number:
___ ___ ___ - ___ ___ ___ ___ ___
Unsatisfactory routine collect date:
___/___/___
Chlorinated: Yes ___ No ___
Chlorine Residual: Total ___ Free ___

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ Sample Collected for Information Only
Investigative ___ Constructions/Repairs ___ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ Unsatisfactory
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ Satisfactory
UC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ___ /ml. E.coli ___ /100ml.
Total Coliform ___ /100mL. Fecal Coliform ___ /100ml.

Method Code: MICR – 2720

SAMPLE INFORMATION

Sample collected by (name): P. Harris

Specific location where sample collected (address or sample site, and type of faucet): Wilson Bldg Storm 358 J

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes X No
Chlorine Residual: Total ____ Free .09

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
____(Population of 1,000 or less)
Unsatisfactory routine lab number:
___ ___ ___ - ___ ___ ___ ___ ___
Unsatisfactory routine collect date:
___/___/___
Chlorinated: Yes____ No____
Chlorine Residual: Total____ Free____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative _____ Constructions/Repairs _____ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count _____ /ml. E.coli _____ /100ml.
Total Coliform _____ /100ml. Fecal Coliform _____ /100ml.

SAMPLE INFORMATION

Sample collected by (name): Peterson

Specific location where sample collected (address or sample site, and type of faucet):
Food Services 89

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes ☒ No ☐
Chlorine Residual: Total ____ Free .02

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
___ ___ ___ - ___ ___ ___ ___ ___ ___
Unsatisfactory routine collect date:
___/___/___
Chlorinated: Yes ____ No ____
Chlorine Residual: Total ____ Free ____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative ____ Constructions/Repairs ____ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory** UAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /mL E.coli ____ /100mL
Total Coliform ____ /100mL Fecal Coliform ____ /100mL

SAMPLE INFORMATION

Sample collected by (name): P. Harvison

Specific location where sample collected (address or sample site, and type of faucet): Northside Residence Hall

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes X No ____
Chlorine Residual: Total ____ Free 0

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
___ ___ ___ - ___ ___ ___ ___ ___
Unsatisfactory routine collect date:
___/___/___
Chlorinated: Yes____ No____
Chlorine Residual: Total____ Free____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative _____ Constructions/Repairs _____ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count _____ /mL E.coli _____ /100mL
Total Coliform _____ /100mL Fecal Coliform _____ /100mL

Sample collected by (name): PS Harris

Specific location where sample collected (address or sample site, and type of faucet):
Wagner 45

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes X No ____
Chlorine Residual: Total ____ Free 1.04

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
____(Population of 1,000 or less)
Unsatisfactory routine lab number:
___ ___ ___ - ___ ___ ___ ___ ___
Unsatisfactory routine collect date:
____/____/____
Chlorinated: Yes____ No____
Chlorine Residual: Total____ Free____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative ____ Constructions/Repairs ____ Other

LAB USE ONLY **DRINKING WATER RESULTS** LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present and
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory** LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /ml. E.coli ____ /100ml.
Total Coliform ____ /100ml. Fecal Coliform ____ /100ml.

SAMPLE INFORMATION

Sample collected by (name): Pat Irvin

Specific location where sample collected (address or sample site, and type of faucet):
Wagner 45

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes X No
Chlorine Residual: Total ____ Free .06

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
(Population of 1,000 or less)
Unsatisfactory routine lab number:
Unsatisfactory routine collect date: / /
Chlorinated: Yes ____ No ____
Chlorine Residual: Total ____ Free ____

3. ☐ E. coli – GWR source sample
Fecal – Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from DWP)

4. ☐ **Sample Collected for Information Only**
Investigative ____ Constructions/Repairs ____ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
VAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /ml. E.coli ____ /100ml.
Total Coliform ____ /100ml. Fecal Coliform ____ /100ml.

SAMPLE INFORMATION

Sample collected by (name): P. Arvia

Specific location where sample collected (address or sample site, and type of faucet):
CUB 63

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes X No ☐
Chlorine Residual: Total ☐ Free 0

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
Unsatisfactory routine collect date:
Chlorinated: Yes ☐ No ☐
Chlorine Residual: Total ☐ Free ☐

3. ☐ E. coli – GWR source sample
Fecal – Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative ☐ Constructions/Repairs ☐ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ☐ /ml. E.coli ☐ /100ml.
Total Coliform ☐ /100ml. Fecal Coliform ☐ /100ml.

SAMPLE INFORMATION

Sample collected by (name): PeHavin

Specific location where sample collected (address or sample site, and type of faucet):
CE-ME 78A

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes ☒ No ☐
Chlorine Residual: Total ☐ Free .06

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
___ ___ ___ - ___ ___ ___ ___ ___
Unsatisfactory routine collect date:
___/___/___
Chlorinated: Yes ☐ No ☐
Chlorine Residual: Total ☐ Free ☐

3. ☐ E. coli – GWR source sample
Fecal – Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative ☐ Constructions/Repairs ☐ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ___ /ml. E.coli ___ /100ml.
Total Coliform ___ /100ml. Fecal Coliform ___ /100ml.

Sample collected by (name): Peterson Chinook

Specific location where sample collected (address or sample site, and type of faucet):
Chinook 679

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes ☒ No ☐
Chlorine Residual: Total ____ Free 1.03

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
___ ___ ___ . ___ ___ ___ ___ ___
Unsatisfactory routine collect date:
___/___/___
Chlorinated: Yes ____ No ____
Chlorine Residual: Total ____ Free ____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative ____ Constructions/Repairs ____ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /ml. E.coli ____ /100ml.
Total Coliform ____ /100ml. Fecal Coliform ____ /100ml.

SAMPLE INFORMATION

Sample collected by (name): PAHerlin

Specific location where sample collected (address or sample site, and type of faucet):
ADBF 807A

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes X No ____
Chlorine Residual: Total ____ Free .Ok

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
Unsatisfactory routine collect date: ____/____/____
Chlorinated: Yes____ No____
Chlorine Residual: Total____ Free____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from WFI

4. ☐ **Sample Collected for Information Only**
Investigative ____ Constructions/Repairs ____ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
LAE

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /ml. E.coli ____ /100ml.
Total Coliform ____ /100ml. Fecal Coliform ____ /100ml.

SAMPLE INFORMATION

Sample collected by (name): P. Hudson

Specific location where sample collected (address or sample site, and type of faucet): Ablejon 32

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes ☒ No ☐
Chlorine Residual: Total ___ Free 0.4

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
(Population of 1,000 or less)
Unsatisfactory routine lab number:
___ ___ ___ . ___ ___ ___ ___ ___
Unsatisfactory routine collect date:
___/___/___
Chlorinated: Yes ___ No ___
Chlorine Residual: Total ___ Free ___

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from DWS

4. ☐ **Sample Collected for Information Only**
Investigative ___ Constructions/Repairs ___ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present and
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ___ /ml. E.coli ___ /100ml.
Total Coliform ___ /100ml. Fecal Coliform ___ /100ml.

Method Code: MICR – 2720

Date and Time Received: 15.6°C CR
11 AUG 2020 1305 Hrs.

SAMPLE INFORMATION

Sample collected by (name): Patterson

Specific location where sample collected (address or sample site, and type of faucet): Bryan 2

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes ☒ No ☐
Chlorine Residual: Total ☐ Free .03

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
__ __ __ - __ __ __ __ __ __
Unsatisfactory routine collect date:
__ __ / __ __ / __ __
Chlorinated: Yes ☐ No ☐
Chlorine Residual: Total ☐ Free ☐

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from WFI

4. ☐ **Sample Collected for Information Only**
Investigative ☐ Constructions/Repairs ☐ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /mL E.coli ____ /100mL
Total Coliform ____ /100mL Fecal Coliform ____ /100mL

SAMPLE INFORMATION

Sample collected by (name): PJ Hanson

Specific location where sample collected (address or sample site, and type of faucet): Rice F6

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes ☒ No ☐
Chlorine Residual: Total ☐ Free 0

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
___ ___ ___ - ___ ___ ___ ___ ___
Unsatisfactory routine collect date:
___/___/___
Chlorinated: Yes ☐ No ☐
Chlorine Residual: Total ☐ Free ☐

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative ☐ Constructions/Repairs ☐ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ___ /ml. E.coli ___ /100ml.
Total Coliform ___ /100ml. Fecal Coliform ___ /100ml.

4. ☐ **Sample Collected for Information Only**
Investigative ____ Constructions/Repairs ____ Other

LAB USE ONLY **DRINKING WATER RESULTS** **LAB USE ONLY**

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory** VAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /ml. E.coli ____ /100ml.
Total Coliform ____ /100ml. Fecal Coliform ____ /100ml.

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes X No ____
Chlorine Residual: Total ____ Free .04

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
____(Population of 1,000 or less)
Unsatisfactory routine lab number:
___ ___ ___ - ___ ___ ___ ___ ___
Unsatisfactory routine collect date:
____/____/____
Chlorinated: Yes____ No____
Chlorine Residual: Total____ Free____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative ____ Constructions/Repairs ____ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory** LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /ml. E.coli ____ /100ml.
Total Coliform ____ /100ml. Fecal Coliform ____ /100ml.

Sample collected by (name): P. Harjan

Specific location where sample collected (address or sample site, and type of faucet):
Cranberry Annex 353

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☑ **Routine Distribution Sample**
Chlorinated: Yes ✓ No ____
Chlorine Residual: Total ____ Free 0

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
____ ____ ____ . ____ ____ ____ ____ ____
Unsatisfactory routine collect date:
____/____/____
Chlorinated: Yes____ No____
Chlorine Residual: Total____ Free____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from WFI

4. ☐ **Sample Collected for Information Only**
Investigative ____ Constructions/Repairs ____ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☑ **Satisfactory**
LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /ml. E.coli ____ /100ml.
Total Coliform ____ /100ml. Fecal Coliform ____ /100ml.

Method Code: MICR – 2720

SAMPLE INFORMATION

Sample collected by (name): Patterson

Specific location where sample collected (address or sample site, and type of faucet):
Gannon - Goldsworthy [illegible] 79

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes X No ____
Chlorine Residual: Total ____ Free .05

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
___ ___ ___ - ___ ___ ___ ___ ___
Unsatisfactory routine collect date:
____/____/____
Chlorinated: Yes ____ No ____
Chlorine Residual: Total ____ Free ____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative ____ Constructions/Repairs ____ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /ml. E.coli ____ /100ml.
Total Coliform ____ /100ml. Fecal Coliform ____ /100ml.

Method Code: MICR – 2720	Date and Time Received: 16.0°C R-4 06 OCT 2020 1314 hrs.

SAMPLE INFORMATION

Sample collected by (name): Patterson

Specific location where sample collected (address or sample site, and type of faucet): Control Receiving 3581

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes X No
Chlorine Residual: Total ___ Free 1.1

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
Unsatisfactory routine collect date:
Chlorinated: Yes No
Chlorine Residual: Total Free

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative Constructions/Repairs Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /mL E.coli ____ /100mL
Total Coliform ____ /100mL Fecal Coliform ____ /100mL

SAMPLE INFORMATION

Sample collected by (name): P. Hanson

Specific location where sample collected (address or sample site, and type of faucet): Bandy Coll. Rm Rob

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes X No
Chlorine Residual: Total Free .02

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
Unsatisfactory routine collect date:
Chlorinated: Yes No
Chlorine Residual: Total Free

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative Constructions/Repairs Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
UAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count /ml. E.coli /100ml.
Total Coliform /100ml. Fecal Coliform /100ml.

Method Code: MICR – 2720

SAMPLE INFORMATION

Sample collected by (name): P. Hanson

Specific location where sample collected (address or sample site, and type of faucet): Bus. 807

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes X No ____
Chlorine Residual: Total ____ Free ____ OR

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
___(Population of 1,000 or less)
Unsatisfactory routine lab number:
___ ___ ___ - ___ ___ ___ ___ ___
Unsatisfactory routine collect date:
___/___/___
Chlorinated: Yes ____ No ____
Chlorine Residual: Total ____ Free ____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative ____ Constructions/Repairs ____ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
WAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /mL. E.coli ____ /100mL.
Total Coliform ____ /100mL. Fecal Coliform ____ /100mL.

SAMPLE INFORMATION

Sample collected by (name): Pat Tarim

Specific location where sample collected (address or sample site, and type of faucet):
Smith Gym 2

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes X No
Chlorine Residual: Total Free 0.3

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
(Population of 1,000 or less)
Unsatisfactory routine lab number:
Unsatisfactory routine collect date: / /
Chlorinated: Yes No
Chlorine Residual: Total Free

3. ☐ E. coli – GWR source sample
Fecal – Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative Constructions/Repairs Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory** LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count /ml. E.coli /100ml.
Total Coliform /100ml. Fecal Coliform /100ml.

Method Code: MICR – 2720

Date and Time Received: 10/19/21 1210 13.6 & 11.4

Date Analyzed: 10/19/21 1729

Date Reported:

1255906
Sample Number (DOH number plus five digits)

Lab Use: MBJ0599906

DOH Form 4301-018 (revised 11/10)

MBJ0599

Specific location where sample collected (address or sample site, and type of faucet): Vet Teaching Hospital RR

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes ☒ No ☐
Chlorine Residual: Total ____ Free .05

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
Unsatisfactory routine collect date:
____/____/____
Chlorinated: Yes____ No____
Chlorine Residual: Total____ Free____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative _____ Constructions/Repairs _____ Other

LAB USE ONLY **DRINKING WATER RESULTS** **LAB USE ONLY**

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count _____ /ml. E.coli _____ /100ml.
Total Coliform _____ /100ml. Fecal Coliform _____ /100ml.

SAMPLE INFORMATION

Sample collected by (name): Patterson Spencer

Specific location where sample collected (address or sample site, and type of faucet): Lewis Arnold Bldg 1604

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☑ **Routine Distribution Sample**
Chlorinated: Yes ✓ No ____
Chlorine Residual: Total ____ Free 0.05

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
___ ___ ___ - ___ ___ ___ ___ ___
Unsatisfactory routine collect date:
____/____/____
Chlorinated: Yes____ No____
Chlorine Residual: Total____ Free____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from WFI

4. ☐ **Sample Collected for Information Only**
Investigative _____ Constructions/Repairs _____ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present and
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory** LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count _____ /mL E.coli _____ /100mL
Total Coliform _____ /100mL Fecal Coliform _____ /100mL

SAMPLE INFORMATION

Sample collected by (name): Amy S Whiteman

Specific location where sample collected (address or sample site, and type of faucet):
Fine Arts 97

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes 0.2 No____
Chlorine Residual: Total____ Free 0.02

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
Unsatisfactory routine collect date:
____/____/____
Chlorinated: Yes____ No____
Chlorine Residual: Total____ Free____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative ____ Constructions/Repairs ____ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /mL E.coli ____ /100mL
Total Coliform ____ /100mL Fecal Coliform ____ /100mL

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes ☒ No ☐
Chlorine Residual: Total ____ Free .07

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
Unsatisfactory routine collect date: ____/____/____
Chlorinated: Yes ____ No ____
Chlorine Residual: Total ____ Free ____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative ____ Constructions/Repairs ____ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /ml. E.coli ____ /100ml.
Total Coliform ____ /100ml. Fecal Coliform ____ /100ml.

SAMPLE INFORMATION

Sample collected by (name): Patterson

Specific location where sample collected (address or sample site, and type of faucet):
Export Farm 147A

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes X No ____
Chlorine Residual: Total ____ Free 1.2

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
____(Population of 1,000 or less)
Unsatisfactory routine lab number:
___ ___ ___ - ___ ___ ___ ___ ___
Unsatisfactory routine collect date:
____/____/____
Chlorinated: Yes____ No____
Chlorine Residual: Total____ Free____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative ____ Constructions/Repairs ____ Other

LAB USE ONLY **DRINKING WATER RESULTS** LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
VAE

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /ml. E.coli ____ /100ml.
Total Coliform ____ /100ml. Fecal Coliform ____ /100ml.

SAMPLE INFORMATION

Sample collected by (name): Pittenger

Specific location where sample collected (address or sample site, and type of faucet):
Bloom 78

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes X No ____
Chlorine Residual: Total ____ Free .05

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
.....(Population of 1,000 or less)
Unsatisfactory routine lab number:
___ ___ ___ - ___ ___ ___ ___ ___
Unsatisfactory routine collect date:
___/___/___
Chlorinated: Yes ____ No ____
Chlorine Residual: Total ____ Free ____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative _____ Constructions/Repairs _____ Other

LAB USE ONLY **DRINKING WATER RESULTS** LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
LAC

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count _____ /ml. E.coli _____ /100ml.
Total Coliform _____ /100ml. Fecal Coliform _____ /100ml.

Special instructions or comments:

Type of Sample (must check only **one** box of #1 through #4 listed below)

1. ☒ **Routine Distribution Sample**
Chlorinated: Yes ☒ No ☐
Chlorine Residual: Total ____ Free 1.04

2. ☐ **Repeat Sample (after unsat. routine)**
Distribution System
Source Groundwater Rule (GWR)
____(Population of 1,000 or less)
Unsatisfactory routine lab number:
__ __ __ . __ __ __ __ __ __
Unsatisfactory routine collect date:
__/__/__
Chlorinated: Yes ____ No ____
Chlorine Residual: Total ____ Free ____

3. ☐ E. coli – GWR source sample
Fecal –Surface, GWI, some springs
Other
S
Public Systems must provide Source Number from (WFI)

4. ☐ **Sample Collected for Information Only**
Investigative ____ Constructions/Repairs ____ Other

LAB USE ONLY — DRINKING WATER RESULTS — LAB USE ONLY

☐ **Unsatisfactory**
Total Coliform Present **and**
☐ E.coli present ☐ E.coli absent
☐ Fecal coliform present ☐ Fecal coliform absent

☒ **Satisfactory**
HE

☐ **Replacement Sample Required**

Sample not tested because:
☐ Sample too old (>30 hours)
☐ Improper container

Test unsuitable because:
☐ TNTC
☐ Turbid culture

Bacterial Density Results: Plate Count ____ /ml. E.coli ____ /100ml.
Total Coliform ____ /100ml. Fecal Coliform ____ /100ml.

Volatile Organic Chemicals (VOC's) Analysis Report
EPA Test Method - EPA 524.3

System ID#:	WA5393200	System Name:	WSU EH&S		
Lab/Sample Number:	125 94212	Collect Date:	8/1/2017	DOH Source #:	S92
Multiple Source Nos:		Sample Type:	A	Sample Purpose:	C
Date Received:	8/1/2017	Date Reported:	8/15/2017	Supervisor:	TGT
Date Analyzed:	8/2/2017				
County:	WHITMAN	Sample Location:	SURPLUS STORES 358B		
Report To:	Address:	P.O. BOX 641172			
	City, State, ZIP	PULLMAN, WA 99164			
	Phone Number:	(509) 335-3041			

DOH #	Analyte	Result	Units	SRL	Trigger	MCL	Method	Analyst	Qualifier
0027	Chloroform	ND	ug/L	0.5			EPA 524.3	SAT	
0028	Bromodichloromethane	ND	ug/L	0.5			EPA 524.3	SAT	
0029	Chlorodibromomethane	ND	ug/L	0.5			EPA 524.3	SAT	
0030	Bromoform	ND	ug/L	0.5			EPA 524.3	SAT	
	Total Trihalomethane	ND	ug/L			80	EPA 524.3	SAT	

ND = Not Detected within the sensitivity of the instrument
Numerical Entry = Detection at level indicated
SRL - Minimum reporting level for Washington DOH
MCL - EPA maximum contaminant level
Trigger - Washington DOH response level. If results exceed this level, contact the DOH

This report shall not be reproduced except in full, without the written approval of the laboratory.
The results reported relate only to the samples indicated.
Soil/solid results are reported on a dry-weight basis unless otherwise noted.

SAMPLE CONDITION RECORD

Samples received in a cooler?	No
Samples received intact?	Yes
What is the temperature of the sample(s)? (°C)	26.2
Samples received with a COC?	Yes
Samples received within holding time?	Yes
Are all sample bottles properly preserved?	Yes
Are VOC samples free of headspace?	N/A
Is there a trip blank to accompany VOC samples?	N/A
Labels and chain agree?	Yes
Total number of containers?	8

0417	Bromochloroacetic acid	ND	ug/L	1			SM6251B	MAH	

Notes:
ND = Not Detected within the sensitivity of the instrument
Numerical Entry = Detection at level indicated
SRL - Minimum reporting level for Washington DOH
MCL - EPA maximum contaminant level
Trigger - Washington DOH response level. If results exceed this level, contact the DOH

This report shall not be reproduced except in full, without the written approval of the laboratory.
The results reported relate only to the samples indicated.
Soil/solid results are reported on a dry-weight basis unless otherwise noted.

SAMPLE CONDITION RECORD

Samples received in a cooler?	Yes
Samples received intact?	Yes
What is the temperature of the sample(s)? (°C)	19.9
Samples received with a COC?	Yes
Samples received within holding time?	Yes
Are all sample bottles properly preserved?	Yes
Are VOC samples free of headspace?	Yes
Is there a trip blank to accompany VOC samples?	N/A
Labels and chain agree?	Yes
Total number of containers?	8

Sample Receipt and Preservation Form

Client Name: INSU Project: *(apply Anatek sample label here)*

TAT: (Normal) RUSH: _____ days

Samples Received From: FedEx UPS USPS (Client) Courier Other: _____

Custody Seal on Cooler/Box: Yes (No) Custody Seals Intact: Yes No (N/A)

Number of Coolers/Boxes: 1 Type of Ice: Ice/Ice Packs (Blue Ice) Dry Ice None

Packing Material: Bubble Wrap Bags Foam/Peanuts (None) Other: _____

Cooler Temp As Read (°C): 11.8 Cooler Temp Corrected (°C): 9.8 Thermometer Used: IR-2

				Comments:
Samples Received Intact?	(Yes)	No	N/A	
Chain of Custody Present?	(Yes)	No	N/A	
Samples Received Within Hold Time?	(Yes)	No	N/A	
Samples Properly Preserved?	(Yes)	No	N/A	
VOC Vials Free of Headspace (<6mm)?	Yes	No	(N/A)	
VOC Trip Blanks Present?	Yes	No	(N/A)	
Labels and Chains Agree?	(Yes)	No	N/A	
Total Number of Sample Bottles Received: 4				

Chain of Custody Fully Completed?	(Yes)	No	N/A	
Correct Containers Received?	(Yes)	No	N/A	
Anatek Bottles Used?	(Yes)	No	Unknown	

Record preservatives (and lot numbers, if known) for containers below:

SS(169-22) → 515

Notes, comments, etc. (also use this space if contacting the client - record names and date/time)

Received/Inspected By: HS Date/Time: 3-26-20 12:05

Notes:
ND = Not Detected within the sensitivity of the instrument
Numerical Entry = Detection at level indicated
SRL - Minimum reporting level for Washington DOH
MCL - EPA maximum contaminant level
Trigger - Washington DOH response level. If results exceed this level, contact the DOH

This report shall not be reproduced except in full, without the written approval of the laboratory.
The results reported relate only to the samples indicated.
Soil/solid results are reported on a dry-weight basis unless otherwise noted.

EPA Regulated Chemical

DOH #	Analyte	Result	Units	SRL	Trigger	MCL	Method	Analyst
0020	Nitrate - N	ND	mg/L	0.5	5	10	EPA 300.0	MER

NOTES:

SRL (State Reporting Level): Indicates the minimum reporting level required by WA-DOH
Trigger Level: DOH drinking water response level. Systems exceeding this level are required to take additional samples. Contact the DOH immediately.
MCL (Maximum Contaminant Level): SDWA maximum contaminant level. If exceeded, contact the DOH immediately.
ND (Not Detected): Indicates that the analysis was performed but the contaminant concentration is less than the SRL.

This report shall not be reproduced except in full, without the written approval of the laboratory.
The results reported relate only to the samples indicated.
Soil/solid results are reported on a dry-weight basis unless otherwise noted.

SAMPLE CONDITION RECORD

Samples received in a cooler?	Yes
Samples received intact?	Yes
What is the temperature of the sample(s)? (°C)	14.2
Samples received with a COC?	Yes
Samples received within holding time?	Yes
Are all sample bottles properly preserved?	Yes
Are VOC samples free of headspace?	Yes
Is there a trip blank to accompany VOC samples?	Yes
Labels and chain agree?	Yes
Total number of containers?	14

SAMPLE CONDITION RECORD

Samples received in a cooler?	Yes
Samples received intact?	Yes
What is the temperature of the sample(s)? (°C)	16.4
Samples received with a COC?	Yes
Samples received within holding time?	Yes
Are all sample bottles properly preserved?	N/A
Are VOC samples free of headspace?	N/A
Is there a trip blank to accompany VOC samples?	N/A
Labels and chain agree?	Yes
Total number of containers?	8

SAMPLE CONDITION RECORD

Samples received in a cooler?	N/A
Samples received intact?	Yes
What is the temperature of the sample(s)? (°C)	14.2
Samples received with a COC?	Yes
Samples received within holding time?	Yes
Are all sample bottles properly preserved?	Yes
Are VOC samples free of headspace?	N/A
Is there a trip blank to accompany VOC samples?	N/A
Labels and chain agree?	Yes
Total number of containers?	4

0020	Nitrate - N	ND	mg/L	0.5	5	10	EPA 300.0	MER

NOTES:

SRL (State Reporting Level): Indicates the minimum reporting level required by WA-DOH
Trigger Level: DOH drinking water response level. Systems exceeding this level are required to take additional samples. Contact the DOH immediately.
MCL (Maximum Contaminant Level): SDWA maximum contaminant level. If exceeded, contact the DOH immediately.
ND (Not Detected): Indicates that the analysis was performed but the contaminant concentration is less than the SRL.

This report shall not be reproduced except in full, without the written approval of the laboratory.
The results reported relate only to the samples indicated.
Soil/solid results are reported on a dry-weight basis unless otherwise noted.

Sample Receipt and Preservation Form

Client Name: INSU Project: *(apply Anatek sample label here)*

TAT: (Normal) RUSH: _____ days

Samples Received From: FedEx UPS USPS (Client) Courier Other: _____

Custody Seal on Cooler/Box: Yes (No) Custody Seals Intact: Yes No (N/A)

Number of Coolers/Boxes: 1 Type of Ice: Ice/Ice Packs (Blue Ice) Dry Ice None

Packing Material: Bubble Wrap Bags Foam/Peanuts (None) Other: _____

Cooler Temp As Read (°C): 11.8 Cooler Temp Corrected (°C): 9.8 Thermometer Used: IR-2

				Comments:
Samples Received Intact?	(Yes)	No	N/A	
Chain of Custody Present?	(Yes)	No	N/A	
Samples Received Within Hold Time?	(Yes)	No	N/A	
Samples Properly Preserved?	(Yes)	No	N/A	
VOC Vials Free of Headspace (<6mm)?	Yes	No	(N/A)	
VOC Trip Blanks Present?	Yes	No	(N/A)	
Labels and Chains Agree?	(Yes)	No	N/A	
Total Number of Sample Bottles Received: 4				

Chain of Custody Fully Completed?	(Yes)	No	N/A	
Correct Containers Received?	(Yes)	No	N/A	
Anatek Bottles Used?	(Yes)	No	Unknown	

Record preservatives (and lot numbers, if known) for containers below:

SS(169-22) → 515

Notes, comments, etc. (also use this space if contacting the client - record names and date/time)

Inorganic Chemicals (IOC's) Analysis Report For Lead And Copper

System ID#:	WA5393200	System Name: WSU EH&S	
			DOH Source #: S93
Multiple Source Nos:		Sample Type: A	Sample Purpose: C
Date Received:	7/18/2018	Date Reported: 8/1/2018	Supervisor: TGT
Date Analyzed:	7/23/2018		
County:	WHITMAN		
Report To:	Address:	P.O. BOX 641172	
	City, State, ZIP	PULLMAN, WA 99164	
	Phone Number:	(509) 335-3041	

Lab Tracking #	Date Collected	Site/Location:	Analyte	Result	Units	Method	Analyst	Qualifier
125 09207	7/17/2018	CHINOOK Y-116	Lead	ND	mg/L	EPA 200.8	HSW	
125 09207	7/17/2018	CHINOOK Y-116	Copper	0.0180	mg/L	EPA 200.8	HSW	

Analyte	DOH#	SRL	AL
Lead	9	0.001 mg/L	0.015 mg/L
Copper	23	0.02 mg/L	1.3 mg/L

NOTES:

ND(Not Detected): Not Detected with the sensitivity of the instrument
SRL (State Reporting Level): Indicates the minimum reporting level required by WA-DOH
Numerical Entry: Detection at level indicated
AL (Federal Action Level) EPA maximum contaminant level. If exceeded, contact your regional DOH office for information.
Anatek Labs PQL for Lead and Copper is 0.001 mg/L.

This report shall not be reproduced except in full, without the written approval of the laboratory.
The results reported relate only to the samples indicated.
Soil/solid results are reported on a dry-weight basis unless otherwise noted.

Sample #: 180719026-001 **Customer Sample #:** CHINOOK Y-116

Recv'd: ☑ **Matrix:** Drinking Water **Collector:**
Date Collected: 7/17/2018
Quantity: 1 **Date Received:** 7/18/2018 3:27:00 PM
Time Collected: 2:32 PM
Comment:

Test	Lab	Method	Due Date	Priority
COPPER	M	EPA 200.8	7/30/2018	***Normal (~10 Days)***
LEAD	M	EPA 200.8	7/30/2018	***Normal (~10 Days)***

SAMPLE CONDITION RECORD

Samples received in a cooler?	Yes
Samples received intact?	Yes
What is the temperature of the sample(s)? (°C)	14.2
Samples received with a COC?	Yes
Samples received within holding time?	Yes
Are all sample bottles properly preserved?	Yes
Are VOC samples free of headspace?	N/A
Is there a trip blank to accompany VOC samples?	N/A
Labels and chain agree?	Yes
Total number of containers?	1

180719 026 **WSEH** Last Due 7/30/2018

Lead and Copper Consumer Notice certification form

All Group A water systems that conduct lead and copper monitoring must provide individual sampling results to the persons at each sample location. (CFR 141.85 (d))

Notification of Results: The water system must provide the consumer notice as soon as possible, but no later than 30 days after learning the results.

Community water systems: You must provide individual sampling results to all residences for which you received lead and copper samples. In multi-unit structures, only notify each unit tested.

Nontransient noncommunity water systems (NTNCs): You must notify all consumers who use water from the sample tap, even if they do not receive a water bill. With prior approval from DOH, NTNC water systems can post the notice in public areas.

Certification to the state: DOH must receive a sample copy of one consumer notice and a signed certification form (below) within 90 days after the end of the monitoring period.

To meet this reporting requirement, you may:

- Use the DOH Consumer Notice Template.
- Use the applicable EPA Consumer Notice template.
- Prepare your own Consumer Notice in conjunction with the state.

If you choose to produce your own Consumer Notice, it must include all of the following:

1. The sample results of the tap tested.
2. An explanation of the health effects of lead.
3. Steps consumers can take to reduce exposure to lead in drinking water.
4. The water system's contact information.
5. The maximum contaminant level goal (MCLG) and action level for lead, and the definitions of these two terms.

If you are responsible for multiple water systems, you can send to the Office of Drinking Water:

- A list of the water systems you provided Consumer Notices to, with name and PWS ID number.
- Send one copy of the Consumer Notice you used.
- Send one completed certification form (below).

Lead and Copper Results: Consumer Notification Certification Form

The water system must complete this section. The signature below certifies that the notice contains all required elements.

Complete the following items (check all that apply):

X I emailed or posted all Consumer Notices to the water users at all of the lead and copper sampling locations within 30 days of receiving the lead and copper results from the laboratory.

☐ **(For NTNC systems ONLY)** Notice posted at _____ on ___/___/____ within 30 days of receiving the lead and copper results from the laboratory. (***Only By Department Approval***)

Washington State University	93200Q		
Water System	PWS ID		
_____		Water Quality Manager	7-16-21
Signature of owner or operator		Position	Date

Send a copy of the completed notice and this certification form to: Washington State Department of Health, Office of Drinking Water, Water Quality Section, PO Box 47822, Olympia WA 98504-7822 or fax to (360) 236-2252.

The maximum contaminant level goal (MCLG) is the level of a contaminant in drinking water below which there are no known or expected risks to health. MCLGs allow for a margin of safety. The action level is the concentration of a contaminant that, if exceeded, triggers treatment requirements or actions a water system must follow.

- The MCLG for lead is “0” and the action level is 0.015 mg/L.
- The MCLG and action level for copper is 1.3 mg/L.

The water system’s compliance with the Lead and Copper Rule (LCR) is calculated by using sample results collected from sites in our sampling pool. Your location’s lead or copper results may be higher or lower than the compliance calculation for the overall water system and does not

reflect our water system's compliance with the LCR. We will notify all water users if the lead or copper results from our water system exceed the action level.

For more information, please contact: Gene Patterson, water quality manager, WSU Environmental Health & Safety at (509) 335 – 3041 or PO Box 641172 Pullman, WA 99164 – 1172.

How Lead Gets Into Water

Lead in drinking water most often comes from water distribution lines or household plumbing rather than from the water system source. Plumbing sources can include lead pipes, lead solder, faucets, valves, and other components made of brass. Lead from other sources (such as lead-based paint and contaminated dust or soil) can increase a person's overall exposure, which adds to the effects of lead in water.

Potential Health Effects of Lead

The greatest risk of lead exposure is to infants, young children, and pregnant women. Lead can cause serious health problems if too much enters the body. Lead is stored in the bones and can be released later in life. Lead can cause damage to the brain and kidneys, interfere with production of red blood cells that carry oxygen, and may result in lowered IQ in children. During pregnancy, the child receives lead from the mother's bones, which may affect brain development. Low levels of lead can affect adults with high blood pressure or kidney problems.

How Copper Gets Into Water

Copper is a mineral and natural component in soils. In the correct amounts, it is an essential nutrient for humans and plants. In Washington State, most copper in drinking water comes from corrosion of household plumbing. Plumbing sources can include copper pipe and brass fixtures. Copper from plumbing corrosion can accumulate overnight.

Potential Health Effects of Copper

Although copper is an essential mineral in the diet, too much copper can cause health problems. Copper is widely distributed within the tissues of the body, but accumulates primarily in the liver and kidneys. A single dose of 15 mg of copper can cause nausea, vomiting, diarrhea, and intestinal cramps. Severe cases of copper poisoning have led to anemia and to disruption of liver and kidney functions. Individuals with Wilson's or Menke's diseases are at higher risk from copper exposure.

How you can reduce exposure:

- When your water has been sitting for several hours, flush the pipe by running the cold-water tap until the water is noticeably colder before using the water for drinking or cooking. **(The longer water has been sitting in the pipes, the more dissolved metals it may contain).**
- Use only cold water for drinking, cooking, and making baby formula. Hot water may contain higher levels of lead or copper.
- Frequently clean the filter screens and aerators in faucets to remove captured particles.
- If building or remodeling, only use "lead free" or low lead piping and materials. Avoid using copper piping or brass fixtures for locations where water will be consumed or used in food preparation (such as kitchen or bathroom sinks).

RE: Project: UCMR4_SE1_Jan2020
Pace Project No.: 35526722

Dear Gene Patterson:
Enclosed are the analytical results for sample(s) received by the laboratory on January 28, 2020. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Aaron Crump

QUALIFIERS

Project: UCMR4_SE1_Jan2020
Pace Project No.: 35526722

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

N2	The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.

RE: Project: UCMR4_SE2_Jul2020
Pace Project No.: 35566473

Dear Gene Patterson:

Enclosed are the analytical results for sample(s) received by the laboratory on July 29, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Ormond Beach

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Aaron Crump

QUALIFIERS

Project: UCMR4_SE2_Jul2020
Pace Project No.: 35566473

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
N2	The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.
S0	Surrogate recovery outside laboratory control limits.

RE: Project: RC UCMR4_SE2_Jul2020
Pace Project No.: 35574504

Dear Gene Patterson:

Enclosed are the analytical results for sample(s) received by the laboratory on September 01, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Ormond Beach

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Aaron Crump

QUALIFIERS

Project: RC UCMR4_SE2_Jul2020
Pace Project No.: 35574504

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
N2	The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.
S0	Surrogate recovery outside laboratory control limits.

RE: Project: UCMR4_SE1_Jan2020
Pace Project No.: 35526700

Dear Gene Patterson:
Enclosed are the analytical results for sample(s) received by the laboratory on January 28, 2020. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Aaron Crump

QUALIFIERS

Project: UCMR4_SE1_Jan2020
Pace Project No.: 35526700

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
N2	The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.
R1	RPD value was outside control limits.
S0	Surrogate recovery outside laboratory control limits.

RE: Project: UCMR4_SE1_Jan2020
Pace Project No.: 35526693

Dear Gene Patterson:
Enclosed are the analytical results for sample(s) received by the laboratory on January 28, 2020. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Aaron Crump

QUALIFIERS

Project: UCMR4_SE1_Jan2020
Pace Project No.: 35526693

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

N2	The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.
R1	RPD value was outside control limits.

ND = Not Detected within the sensitivity of the instrument
Numerical Entry = Detection at level indicated
SRL - Minimum reporting level for Washington DOH
MCL - EPA maximum contaminant level
Trigger - Washington DOH response level. If results exceed this level, contact the DOH

This report shall not be reproduced except in full, without the written approval of the laboratory.
The results reported relate only to the samples indicated.
Soil/solid results are reported on a dry-weight basis unless otherwise noted.

ND = Not Detected within the sensitivity of the instrument
Numerical Entry = Detection at level indicated
SRL - Minimum reporting level for Washington DOH
MCL - EPA maximum contaminant level
Trigger - Washington DOH response level. If results exceed this level, contact the DOH

This report shall not be reproduced except in full, without the written approval of the laboratory.

The results reported relate only to the samples indicated.
Soil/solid results are reported on a dry-weight basis unless otherwise noted.

ND = Not Detected within the sensitivity of the instrument
Numerical Entry = Detection at level indicated
SRL - Minimum reporting level for Washington DOH
MCL - EPA maximum contaminant level
Trigger - Washington DOH response level. If results exceed this level, contact the DOH

This report shall not be reproduced except in full, without the written approval of the laboratory.
The results reported relate only to the samples indicated.
Soil/solid results are reported on a dry-weight basis unless otherwise noted.

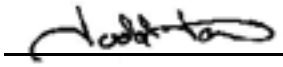
Inorganic Chemicals (IOC's) Analysis Report For Nitrates

System ID#:	WA5393200	System Name:	WSU EH&S		
Lab/Sample Number:	125 09216	Collect Date:	7/18/2018	DOH Source #:	S06
Multiple Source Nos:		Sample Type:	B	Sample Purpose:	C
Date Received:	7/18/2018	Date Reported:	8/2/2018	Supervisor:	TGT
Date Analyzed:	7/19/2018 9:12:00 PM				
County:	WHITMAN	Sample Location: S06 (WELL #6)			
Report To:	Address:	P.O. BOX 641172			
	City, State, ZIP	PULLMAN, WA 99164			
	Phone Number:	(509) 335-3041			



EPA Regulated Chemical

DOH #	Analyte	Result	Units	SRL	Trigger	MCL	Method	Analyst
0020	Nitrate - N	ND	mg/L	0.5	5	10	EPA 300.0	MER

NOTES:

SRL (State Reporting Level): Indicates the minimum reporting level required by WA-DOH
Trigger Level: DOH drinking water response level. Systems exceeding this level are required to take additional samples. Contact the DOH immediately.
MCL (Maximum Contaminant Level): SDWA maximum contaminant level. If exceeded, contact the DOH immediately.
ND (Not Detected): Indicates that the analysis was performed but the contaminant concentration is less than the SRL.

This report shall not be reproduced except in full, without the written approval of the laboratory.
The results reported relate only to the samples indicated.
Soil/solid results are reported on a dry-weight basis unless otherwise noted.

SAMPLE CONDITION RECORD

Samples received in a cooler?	Yes
Samples received intact?	Yes
What is the temperature of the sample(s)? (°C)	14.2
Samples received with a COC?	Yes
Samples received within holding time?	Yes
Are all sample bottles properly preserved?	Yes
Are VOC samples free of headspace?	Yes
Is there a trip blank to accompany VOC samples?	Yes
Labels and chain agree?	Yes
Total number of containers?	14

APPENDIX F-2

Coliform Sampling Plan

Coliform Monitoring Plan
Washington State University/
Tula Young Hastings Farm
Water Systems

Completed by: Marty O'Malley
Title: Environmental Health Specialist

Date: January 1, 1992
Revised: June 15, 2015

I. MAP: - (See Attached)

II. NARRATIVE:44

1. Water System Name: Washington State University
2. System ID number: 93200Q
3. Water Sources:

DOH SOURCE #	SOURCE NAME	SOURCE CATEGORY	DEPTH (Ft.)	LOCATION			
				1/4,1/4 Sec.	Sec #	TWP	Range
S01^	Steam Plant Well #1	Well	247	NE/SE	05	14N	45E
S02#	Steam Plant Well #2	Well	214	NE/SE	05	14N	45E
S03^	Steam Plant Well #3	Well	223	NE/SE	05	14N	45E
S04	**Steam Plant Well #4**	**Well**	**275**	**NE/SE**	**05**	**14N**	**45E**

S09	**Well # 8**	**Well**	**813**	**NE/NW**	**04**	**14N**	**45E**

^ = EMERGENCY ONLY # = Abandoned

4. Storage/Reservoirs:

Name	Building Number	Capacity (Gallons)
East Reservoir	308A	2,000,000
West Reservoir	308B	2,000,000
Elevated Tank	309	100,000
North Fairway Reservoir	317	2,000,000
Roundtop Reservoir +	320	100,000

+ = Provides water to the golf course irrigation system only.

5. Booster Station:

a. The booster station transfers water from the low zone to the high zone.

6. Treatment Facilities:

A. Gas Chlorination
1. Location: At well sites S01, S03, S04, S05, S06, S08 and S09.
2. Type of Treatment: Gas chlorination.
3. Purpose: Disinfection.

7. Total Population Served (2009):

a. Fall / Spring Semesters:

Full-time residential population	7,260
Regular non-residential users	12,909
Total	20,169

b. June - July:

Full-time residential population	447
Regular non-residential users	6,305
Total	6,752

8. Service Connections (from WFI):

Type	Number
Full time residential units	4,096
Institutional buildings:	~ 250
Total service connections:	4,346

9. Number of Zones (Elevation): 2 (High & Low)

10. Population Served by Each Zone:

The high zone provides about 60% of the total water pumped by the wells, with the low zone providing approximately 40% of the water. A significant amount of the water used by the high zone goes to the Steam Plant for steam production and summer irrigation.

11. Number of Service Connections Sampled in Each Zone:

a. Low Zone: 60 Buildings
b. High Zone: 49 Buildings

SERVICE CONNECTION SAMPLE LOCATIONS
BY BUILDING NAME

Per the Groundwater Rule, within 24 hours of notification of a positive coliform sample, the well(s) that were in operation on the day of the positive sample shall be sampled prior to chlorination while the well is running, along with the repeat samples.

Modifications to the Coliform Sampling Plan by Year

1996: Kamiak Apts. and the South Fairway I.M. Field have been deleted from sampling program. The Yakima Apt. Complex and the Vet Teaching Hospital have been added.

May 16, 1996: Clearance was received from DOH to lower the required number of samples in June and July to 10. The sampling plan was modified and the following sites dropped from routine sampling: Stevens, McCroskey, Community and Duncan Dunn. The following sites were added: Lighty Student Services and the Recycle Building.

September 24, 1996: Heritage House was removed from the sampling program (the building was torn down). Added were the new Engineering Teaching and Research Laboratory Building (ETRL).

October 16, 1998: The Anthropology Lab was removed from the sampling program (the building was torn down). Chem. Stores and the Steffen Center were removed because of problems gaining access to the buildings. Routine sampling to the East and West reservoirs was discontinued per WDOH recommendation. The following locations were added to the sampling program: D I Facility, ADBF, Plant Growth - WRC, ANIMAL SCIENCES LABS, Bohler Annex and Clark.

1999: Routine monitoring of the booster station was discontinued.

August 2000: Wells 1, 3 & 4 designated as emergency use only. Well # 2 abandoned.

January 2001: Spillman was removed from the sampling program (the building was torn down). Added in its place was the new Student Rec Center (SRC).

January 14, 2002: Removed the motor pool, it is on a dead end line. Added the Creamery annex (353) and the Center for Undergraduate Education (CUE) (# 95)

March 2004: Removed IBC greenhouse, replaced with Grimes Way Steam Plant.

December 2004: Added School of Communication addition, removed 2 sampling of the Pullman Memorial Hospital. Changed Pullman Memorial Hospital to Student Health.

September 2005: Changed Student Health to Washington Building.

October 2005: Removed golf course club house, replaced with SRC, replaced motor pool with creamery annex.

December 2005: Removed the DI Facility (no potable supply), CASP (shut down); renamed Wilmer/Davis to Hillside, Regents to Northside, new energy plant to Grimes Way Steam Plant; temporarily replaced Rotunda with Stephenson Down-under, CUB with Wilson.

August 2006: Central Stores and Compton Union Building were removed from February and PBS-1 and Streit-Perham were added. Central Stores was removed from April and Bustad was added. CUB was removed from May and PBS-1 was added. Central Stores was removed from July and McCoy was added. McCoy was deleted from October and PBS-1 was added.

December 2006: Saved to Public Health - Public folder. Revised the population summary in August 2006 and added to 2007 plan. The following were added to the Service Connection Sample Locations: Center for Undergraduate Education, Creamery Annex, Golf Course Maintenance Shop, Grimes Way Steam Plant and Large Animal Barn.

June 17, 2007: Discontinued fluoridation (started in 1998).

December 2007: Added Southside Café (opening in spring); Golf Course Clubhouse and CUB (opening in fall). Added summary below of samples/building/year.

August 2008: Changed pool sampling from monthly to quarterly (Feb, May, Aug and Nov)

January 2009: Added CUB back into schedule; revised scheduling for other buildings. Deleted Ad Annex. Dropped pool sampling.

July 2010: Added Biotech/Life Sciences, Motor Pool and Tennis Court Restrooms. Removed the Student Book Corporation and EH&S Treatment Facility. Revised schedule for other buildings. Added Building Section Tables and new Groundwater Rule.

December 2010: “Nez Perce E” was changed to “Nez Perce D”. “677E” was changed to 677D. Removed December Tennis Courts and replaced it with Alumni Center.

June 2011: Food Science Human Nutrition was changed to quarterly sampling and was removed from September and then added to July and October. Steptoe Apt. B was removed from January and the Rec Center was removed from Nov to accommodate the new quarterly sampling for Food Science and Human Nutrition and stay within the sampling limit per month.

July 2011: Orton was added to September to make 25 WSU water system samples in September.

August 2011: Van Doren replaced Beasley Coliseum in December.

Sept 2011: Honors moved to Sept from August and Murrow West moved to August from Sept.

Oct 2011: Bustad moved to Oct. from Nov., Heald moved to Nov. from October. Bustad moved from April to May. Heald moved from May to April.

Jan 2012 Communication addition was replaced with Daggy Hall in Jan. Plant Growth Center (122) was removed from May and Nov and replaced with Chinook Apt BB in May and Johnson hall in Nov. Chinook Apt BB was removed from Aug and put in Feb to spread out the samples at the location better. French Administration was moved from Feb to Aug. Chinook Apt. BB was removed from June and was replaced with Cleveland Hall. Alumni Center was deleted from Nov and added to Sept. Coman was deleted from Sept and added to Nov. Chinook Apt BB was removed from Dec and Yakima Apt was added to Dec. Stimson was added to Sept. Plant Growth Center was removed from the monitoring plan. In May it was replaced with Chinook BB. In November it was replaced with Johnson Hall.

Feb 2012: Changed Valley Crest B (no sample site) to Valley Crest A; changed upstream sample site to Food Quality Building.

June 2012: Plant Science Greenhouse 114 was changed to Meats Lab 98. Nez Perce D 677D was changed to Nez Perce F. Plant Science Greenhouse 114 was changed to McEachern Graduate Residence 805 in Jan. Plant Science Greenhouse 114 was changed to Columbia Apt.F678F for Oct. Changed the sample days for Chinook Apt. AA.

July 2012: Replaced Plant Science Greenhouse with Central Production-Stephenson for October and updated the table indicating the months and number of times sampled.
October 2012: Need to revise Central Stores since it has moved. NRCS replaced with Dodgen Research Facility (NRC).

December 2012: Alumni Ctr and EH&S moved from December to November. Clark and Palouse Ridge Maintenance Fac added to December.

May 2015: Replaced Golf Course Maint. Facility with Eggert Farm. Replaced McAllister with Neill. Swapped Neill in March for Webster in February. Swapped Neill in October with Washington in September. Changed University Stores in June to General Storage.

Sampling Information

NUMBER OF ROUTINE SAMPLES REQUIRED BY REGULATIONS:	NUMBER OF SAMPLES SITES NEEDED TO REPRESENT THE DISTRIBUTION SYSTEM:
1	6

	TYPE	SITE #	LOCATION
SAMPLE SITE GROUP	ROUTINE	1	County Shop
	REPEAT	2	Dairy Center Office
	REPEAT	4	Swine Center Residence
	REPEAT/Trigger*	-	Well sample while in operation
SAMPLE SITE GROUP	ROUTINE	2	Dairy Center Office
	REPEAT	5	Dairy Center Residence
	REPEAT	11	Whitman County Shop Building
	REPEAT/Trigger*	-	Well sample while in operation
SAMPLE SITE GROUP	ROUTINE	3	Beef Center Teaching Wing
	REPEAT	5	Dairy Center Residence
	REPEAT	2	Dairy Center Office
	REPEAT/Trigger*	-	Well sample while in operation

* Per the Groundwater Rule, within 24 hours of notification of a positive coliform sample, the well that was in operation on the day of the positive sample shall be sampled prior to chlorination while the well is running, along with three (3) repeat samples (original collection site that was positive and 2 additional sites. The well sample serves as a REPEAT and Source Trigger Sample).

For maximum coverage of different branches of the distribution system, a decision to rotate the required routine sample(s) among different sample sites may be made. It is recommended that ROUTINE sampling sites be tested about 4 times per year or more often.

ROTATION SCHEDULE

MONTH	SAMPLE SITE(S)	MONTH	SAMPLE SITE(S)
JANUARY	County Shop	**JULY**	County Shop
FEBRUARY	Dairy Center	**AUGUST**	Dairy Center
MARCH	Beef Center	**SEPTEMBER**	Beef Center
APRIL	County Shop	**OCTOBER**	County Shop
MAY	Dairy Center	**NOVEMBER**	Dairy Center
JUNE	Beef Center	**DECEMBER**	Beef Center

The month after a positive coliform sample, five (5) FOLLOW-UP samples must be submitted. Below are the sires for the FOLLOW-UP samples. Sites designated as other sampling sites may be also used as FOLLOW-UP sites. Also, list any sites which will be used with any FOLLOW-UP.

MONTH AFTER SAMPLE SITES

The month following a positive sample the following sites will be sampled: County Shop (#1); Dairy Center (#2); Beef Center (#3); Whitman County Shop Building (#14); and Beef Center Residence (#6). This will completely cover the entire water system.

APPENDIX F-3

WSU Chlorine Safety Procedures

Rev. 6-28-07

A minimum of two persons trained in these procedures is required for all cylinder changes; one equipped with a two-way radio and standing in the open door of the chlorinator room observing the other changing cylinders. Both must be wearing long-sleeved shirts, impermeable gloves and non-vented chemical goggles for protection against possible liquid chlorine leaks. The cuffs of their long-sleeved shirts must be pulled down and buttoned over the gauntlets of the gloves. Increased safety is afforded by both wearing their full-face respirators, in which case the use of goggles is not required. The portable chlorine monitor must be turned "On" and be immediately at hand. In the case of the chlorinator enclosure at the Dairy Farm, which is located outside, the observer must be close enough to lend timely assistance.

Well #4 (Near the Coal Pile at the Energy Plant)

1. Call WHITCOM prior to entering the chlorinator room and give notice that you will be working on the system, as your entry will trigger an alarm at WHITCOM. Your work on the system could trigger a chlorine alarm at WHITCOM also.

2. Turn on the ventilation fan.

3. Make sure that the handle for opening and closing the cylinder valve is in place on the valve.

4. If a leak occurs while you are changing cylinders, and the concentration of chlorine in air reaches 1 part per million (ppm) the strobe light on the exterior of the chlorinator room will activate and the buzzer alarm in the interior of the room will sound. If the concentration reaches 3 ppm, the strobe will continue and the exterior horn will activate. Also, WHITCOM will receive the silent alarm via the dialer. WHITCOM will also receive a silent alarm when there is a power failure that affects the detector. You must check your hand-held or the on-site monitor to determine the concentration of gas to air. If either monitor indicates a gas concentration of between 0.5-9.9 ppm, don the full-face respirators prior to further attempts to find and repair the source of the leak. If it appears that your repair efforts are successful, use the ammonia solution for verification. The on-site and hand-held detectors should indicate dilution of the concentration of chlorine in the chlorinator room by the operation of the ventilation fan and the open door. If the leak is stopped call WHITCOM to give verification.

   If the concentration of chlorine increases to greater than or equal to 10 ppm while you are working and/or the leak cannot be fixed, shut off the ventilation fan, close the door, retreat to a safe location upwind and notify WHITCOM that the leak cannot be stopped. Remain in the area upwind to be available for lending **advisory** assistance to the HazMat Team when they arrive, if requested. If necessary the HazMat Team will respond with the cylinder containment vessel.

5. When an unwitnessed leak occurs, WHITCOM will receive the silent alarm at 3 ppm and will notify the HazMat Team and the Facilities Operations Dispatcher. The Dispatcher should then contact Water Treatment on-duty or on-call personnel. The Water Distribution Specialist is responsible for contacting qualified maintenance personnel to respond and assist in making repairs to the chlorine system for continued operation of the well pump. If the unwitnessed leak is less than 3 ppm the Facilities Operations Dispatcher will not know about it until someone calls in and reports that the strobe light and intermittent audible alarm have activated. The Dispatcher should then notify WHITCOM so that the HazMat team can respond, and also contact Water Treatment on-duty or on-call personnel. Upon your arrival, you must report to the HazMat team's Incident Commander. You must not enter the chlorinator or pump rooms on any alarm until the facility is cleared by the HazMat team.

6. The Water Distribution Specialist is responsible for notifying the vendor of the leaky valve or cylinder as soon as possible.

Well #6 (Beasley Parking Lot) and Well #7 (Uphill of the Energy Plant on College Avenue)

The same procedure as with **Well #4** above.

END

APPENDIX F-4

WSU Cross-Connection Control Program

WASHINGTON STATE UNIVERSITY

Environmental Health and Safety

May 12, 2008

Jeff Johnson
Washington State Department of Health
Office of Drinking Water
Eastern Regional Office
1500 W. 4th Ave., Suite 305
Spokane, WA 99204

Re: WSU Water Board Approval of Cross Connection Control Program

Dear Mr. Johnson:

The WSU Water Board and administration officially approved the Cross Connection Control Program that covers the WSU Pullman (#93200Q), Tula Young Hastings Farm (#895200) and Prosser (#93195H) Water Systems in October 2006.

Please contact the WSU Water Board at 509-335-3041 if you have any further questions.

Sincerely,

Dwight Hagihara
WSU Water Board Co-Chair

Ev Davis
WSU Water Board Co-Chair

Operating Permits and Water Works Operator Certification 20
Water Use Efficiency Rule and Water Conservation 20

PURPOSE

Washington State University (WSU) is responsible for planning, operating, sampling, maintaining and protecting University owned public drinking water systems and water supply connections to meet the requirements of WAC 246-290 through WAC 246-296, WAC 173-160 and WAC 51-56. WSU is also responsible for helping to ensure that the quality of water WSU facilities receive from non-WSU public water systems meets state and federal requirements.

AUTHORITY AND RESPONSIBILITY

The Water Board, comprised of staff from Facilities Operations, Environmental Health and Safety (EH&S), Housing and Dining Services, Capital Planning and Development, and Regional Campus and Research Unit (RCRU) representatives, has the ultimate authority and responsibility for all WSU water systems and facilities located around the state to meet all applicable regulations. The Water Board is also responsible for planning, constructing and repairing, operating, sampling, maintaining, and protecting WSU's public drinking water systems and water supply connections throughout the state to meet the requirements in WAC 246-290 through WAC 246-296, WAC 173-160 and WAC 51-56.

The Water Board must develop all policies, procedures, and this WSU Drinking Water, Cross-connection Control and Water Conservation Program document (hereinafter referred as the Program document) for more specific information. This Program document provides detailed planning, development, construction and repair, maintenance, sampling, monitoring, and operating procedures to ensure WSU drinking water systems are maintained and operated in a safe and cost effective manner. The most current version of this Program document is located on the WSU Environmental Health and Safety web site under drinking water at: http://www.ehs.wsu.edu/ph.asp.

The Water Board must coordinate with local administrative authorities of non-WSU water systems in all matters concerning cross-connection control (and other drinking water issues). The Water Board must document and describe such coordination, including delineation of responsibilities, in this Program document.

The Water Board must be co-chaired by the Facilities Operations and EH&S Directors. Regional Campus and Research Unit representatives may assign appropriate staff members to assist the board. The Water Board must meet at least annually. The Board must be comprised of the following positions:

Facilities Operations
Director
Director, Maintenance and Utilities Services
Water Distribution Manager
Water System Engineer

Environmental Health and Safety
Director
Public Health Manager
Facility Health and Safety Coordinator

AUTHORITY AND RESPONSIBILITY (cont.)

Housing and Dining Services
Director, Maintenance Services for Campus Life
Industrial Hygienist
Maintenance Coordinator

Capital Planning and Development
Director, Construction Service and Quality Assurance
Project Manager / Professional Engineer

Regional Campuses and Research Units
CAHNRS Business and Personnel Office Director
WSU Spokane – Facilities Operations Manager
WSU Tri-Cities – Environmental Health and Safety Officer
WSU Vancouver - Facilities Operations Manager

The Water Board

- Develops all drinking water programs, policies and procedures for WSU.
- Helps protect drinking water systems and water supply connections.
- Performs and enforces corrective actions.
- Ensures that qualified personnel are provided to develop and implement all applicable programs.
- Develops schedules for performing risk assessments.
- Develops a quality assurance program for backflow prevention assembly testing.
- Develops procedures for responding to water quality and backflow incidents.
- Provides educational programs for consumers about drinking water systems, conservation, cross-connection controls, etc.
- Coordinates with and notifies the Dept. of Health (DOH), local administrative and/or health authorities of any incidents, and documents the incidents.

Facilities Operations

- Operates and maintains all Group A and B water systems in Whitman County (excluding Palouse Conservation Field Station, operated by USDA, maintenance and repairs performed by Facilities Operations).
- Conducts limited monitoring of the drinking water system.

Facilities Operations (cont.)

- Coordinates master planning with the Infrastructure Master Planning Committee.

- Is responsible, along with Capital Planning, Development, and RCRU, for the design, plan and specification review, and construction of additions, modifications and new construction to WSU drinking water systems throughout the state.

- Provides bacteriological and chlorine disinfection water sampling for construction and repairs (or oversees the contractor that performs the sampling), with assistance from EH&S, RCRU, Housing and Dining Services and/or Capital Planning and Development. Facilities Operations or the contractor must provide the results to EH&S.

- Prior to water being used for drinking purposes, Facilities Operations must test all new backflow prevention assemblies in Whitman County and must obtain testing results from outside of Whitman County, and obtain satisfactory bacteriological sample results from repairs or maintenance. Facilities Operations (or the contractor if applicable) must provide bacteriological sample results to EH&S.

- Provides alternative drinking water sources if construction and/or maintenance require disruption of water services on a case by case basis.

- Prepares the annual Cross-connection control summary report and assists EH&S with the development and preparation of other regulatory reports as required.

Facilities Operations representative:

- A certified Water Distribution Manager 3 is in responsible charge of the daily operational activities of the water systems in Whitman County, and their treatment facilities and distribution systems that directly impact water quality and/or quantity of water as required per WAC 246-292.

Environmental Health and Safety (EH&S)

- Conducts bacteriological and chemical sampling for Whitman County water systems (excluding construction and repair samples) required by federal and state regulations, and assists Facilities Operations, Capital Planning and Development, RCRU and other WSU water systems around the state with their sampling responsibilities. Any required sampling for construction and repairs must be performed by the department or contractor making the repair. (Refer to the Construction and Repair section and the Sampling, Monitoring, Repair section below.).

- Investigates concerns regarding drinking water quality and performs sanitary surveys of drinking water systems, including wells, reservoirs, distribution systems and treatment facilities.

- **EH&S (cont.)**

- Reviews plans and specifications for new construction and remodels.

- Evaluates current and new regulations to help ensure WSU remains in compliance and maintains safe and healthy drinking water.

- Acts as the liaison with the Washington State Department of Health, Department of Ecology, local health departments or districts, and the EPA regarding regulatory compliance.

- Assists Facilities Operations with the development and preparation of various regulatory reports as required.

Capital Planning and Development (CPD)

- Coordinates with and receives approval from the Facilities Operations Cross-connection Control Specialist and Water Distribution Manager on water line maintenance and installation, backflow prevention assembly testing, connection of new equipment, etc.

- Prior to water being used for drinking purposes, Capital Planning and Development (CPD) must obtain satisfactory bacteriological sample results and must have Facilities Operations test backflow prevention assemblies from new construction or repairs in Whitman County. Outside of Whitman County, the contractor must test backflow prevention assemblies prior to water being used for drinking purposes. RCRU or the contractor must provide bacteriological sample results to EH&S and the contractor must provide backflow prevention assembly test results, certified Backflow Assembly Testers (BATs) names, certification and telephone numbers to Facilities Operations.

Housing and Dining Services

- Coordinates with and receives approval from the Facilities Operations Cross-connection Control Specialist and Water Distribution Manager on water line maintenance and installation, backflow prevention assembly testing, connection of new equipment, etc.

- Prior to water being used for drinking purposes, Housing and Dining Services must obtain satisfactory bacteriological sample and backflow prevention assembly testing results from new construction or repairs. Housing and Dining Services or the contractor must provide bacteriological sample results to EH&S and backflow prevention assembly testing results to Facilities Operations.

- Conducts maintenance on water lines and contracts with certified BATs to perform backflow prevention assembly testing. Housing and Dining Services must provide the certified BATs names, certification and telephone numbers to Facilities Operations if applicable.

Regional Campuses and Research Units (RCRU)

RCRU operates, maintains, and conducts limited monitoring of the drinking water systems located outside Whitman County, and coordinates water conservation efforts.

RCRU representatives:

- The RCRU Facilities Operations representative coordinates with and receives approval from the Facilities Operations Cross-connection Control Specialist and Water Distribution Manager on water line maintenance and installation, backflow prevention assembly testing, connection of new equipment, etc.

- A certified Water Distribution Manager is in responsible charge of the daily operational activities of the WSU Prosser - IAREC water system, as well as Group B systems at Roza, Othello, Royal Slope and Lind Research Units, and their treatment facilities and distribution systems that directly impact water quality and/or quantity of water as required per WAC 246-292.

- The RCRU CPD representative coordinates master planning with the Infrastructure Master Planning Committee.

- The RCRU Facilities Operations and CPD representatives are responsible for the design and construction of additions and modifications to WSU drinking water systems across the state (in addition to Facilities Operations and CPD), review of plans and specifications for new construction and remodels, and ensuring that additions, modifications, new construction, and remodels are in compliance with all regulations.

- The EH&S representative assists RCRU Facilities Operations with bacteriological and chemical sampling outside of Whitman County (excluding construction and repair samples) as required by federal and state regulations, and assists Facilities Operations and other WSU water systems around the state with their sampling responsibilities. Any required sampling for construction and repairs must be performed by the department or contractor making the repair.

- The RCRU Facilities Operations, CPD and/or EH&S representative must obtain satisfactory bacteriological sample and backflow prevention assembly testing results from new construction or repairs prior to water being used for drinking purposes. RCRU or the contractor must provide bacteriological sample results to EH&S and backflow prevention assembly testing results to Facilities Operations. Certified BATs hired or contracted by RCRU must provide their names, certification and telephone numbers to Facilities Operations.

- The RCRU Facilities Operations or CPD representative must provide alternative drinking water sources if construction and/or maintenance require disruption of water service on a case by case basis.

RCRU representatives (cont.):

- EH&S representative investigates concerns regarding drinking water quality and performs sanitary surveys of drinking water systems, including wells, reservoirs, distribution systems and treatment facilities.

- EH&S representative acts as the liaison with the Washington State Department of Health, Department of Ecology, and the EPA regarding regulatory compliance.

- EH&S representative develops and prepares various regulatory reports as required.

EH&S in Pullman evaluates current and new regulations to help ensure WSU remains in compliance and maintains safe and healthy drinking water.

Water System Users

Any WSU department (including Housing and Dining Services), organization, non-WSU entity, or person that connects equipment, installs piping, or makes changes to water systems must receive prior approval from Facilities Operations Utilities or RCRU. Changes to water systems include tying into any WSU fire hydrant (refer to Fire Hydrant / Water Line Use and Backflow Prevention by Contractors below).

The following are the organizational alignments specifying what WSU entity and / or purveyor is responsible for what systems, facilities, and their appropriate programs:

<u>Facilities Operation in Pullman, WA</u>
Pullman Campus
Central Ferry Research Farm
Palouse Conservation Field Station (operated by USDA)
Smoot Hill Biological Field Study Area
Spillman Farm
Tula Young Hastings Farm

<u>Housing and Dining Services</u>
Pullman Campus departmental facilities

<u>Prosser Irrigated Agriculture Research and Extension Center</u>
Prosser Research and Extension Center
Lind Dry Land Research Unit
Othello Research Unit
Royal Slope Columbia Basin Research Unit #2 (operated by private organization)
Roza Research Unit

Water System Users (cont.)

WSU Tri-Cities Regional Campus

Puyallup Research and Extension Center
Puyallup Research and Extension Center
Mount Vernon Research and Extension Center

Wenatchee Tree Fruit Research and Extension Center
Tree Fruit Research and Extension Center
Columbia View Orchard Research Unit
Colockum Multiple Use Research Unit
Smith Tract

WSU Spokane
Spokane Regional Campus
Intercollegiate Center for Nursing (ICN) - Spokane
SIRTI (non-WSU building but WSU oversees by contracting)

WSU Vancouver
Vancouver Regional Campus
Vancouver Research and Extension Unit

PROGRAM ELEMENTS

Construction, Cross-connection Control, Plan Review and Related Programs

Construction and Repair

Facilities Operations or Capital Planning and Development must submit project reports and construction documents for Group A and B new systems, extension of systems, and improvements to DOH for approval prior to commencing construction with the exception of the activities listed in WAC 246-290-125. Facilities Operations or Capital Planning and Development must provide copies of project reports and construction documents to the Water Distribution Manager and EH&S. Refer also to Plan Review section below.

Any required bacteriological sampling for construction and repairs must be performed by the department or contractor making the repair. Refer to the Sampling, Repair and Emergency Procedures section for more information.

Cross-connection Control

By elimination or control of existing cross-connections between potable and non-potable water systems, plumbing fixtures, and industrial piping systems (including reclaimed and/or reuse water), WSU can maintain safe drinking water supplies. Establishment of a Cross-connection Control Program helps WSU comply with WAC 246-290-490, WAC 246-291-270, WAC 51-56-0600 and Uniform Plumbing Code (UPC) regulations. WSU must adhere to WAC 246-290-490 and WAC 246-291-270 for premises isolation (water supply to buildings) and the UPC and WAC 51-56-0600 for in-premises isolation (internal building water distribution).

Required Personnel and Responsibilities:

Water Distribution Manager:

- Responsible charge of the daily operational activities of the water systems, treatment facilities and distribution systems that directly impact water quality and/or quantity of water as required per WAC 246-292.

Cross-connection Control Specialist (CCS):

- Develops and implements the cross-connection control program (WAC 246-290-490(3) (c) through (g), and (j)).
- Assesses the risk for each potential connection to the water supply, and determines degree of hazard, degree of acceptable risk, and reliability required of the backflow preventer (WAC 246-290-490(4)(a)(i)).
- Determines the kind of backflow preventer required for each connection assessed for risk (WAC 246-290-490(4) (a) (ii)).
- Inspects backflow preventer installations to ensure that protection is provided commensurate with the assessed degree of hazard (WAC 246-290-490(7) (a) (i)).
- Develops cross-connection control procedures related to initial evaluation prior to service being provided to a new connection (WAC 246-290-490(3) (c) (i)).
- Initially evaluates existing connections for proper risk assessment and the application of appropriate backflow preventer (WAC 246-290-490(3) (c) (ii).
- Periodically reevaluates (on a schedule acceptable to the DOH, or whenever there is a change in use of a premises) all service connections to ensure the application of proper backflow prevention (WAC 246-290-490(3) (c) (iii)).
- Must inspect air gaps installed in lieu of approved backflow prevention assemblies, or must inspect backflow prevention assemblies for correct installation and approval status (WAC 246-290-490(7)(a)(ii)).

Backflow Assembly Tester (BAT):

- Tests approved backflow assemblies for proper operation (WAC 246-290-490(7) (a) (iii)).
- Inspects and/or tests approved air gaps and approved backflow assemblies; 1)at the time of installation; 2) annually or more frequently thereafter, 3) whenever there is a backflow incident, and/or; 4) whenever an assembly is repaired, reinstalled or relocated, or an air gap is re-plumbed (WAC 246-290-490(7)(b)).

Water Board:

- Per WAC 246-290-490(3)(a), (b), (h) and (i), develops this Program document that establishes legal authority to implement a cross-connection control program, describes operating policies, develops and implement procedures for responding to backflow incidents and educates consumers on cross-connection control.

There are additional duties of CCS's and BAT's associated with backflow prevention devices, which are a lower priority and are not included in this document.

NOTE: It is important that BATs report unapproved assemblies or assembly installations, uncovered during annual inspections or incident evaluations to the CCS. In general, all inspection and testing reports generated by BATs should be reviewed by the CCS and the Water Distribution Manager.

Using the above state certified Cross-connection Control Specialists and Backflow Assembly Testers (either associated with the Pullman campus, or using their own certified maintenance personnel, or hired as independent contractors), each regional campus, research station, etc. is ultimately responsible for ensuring that their own water systems or water supply connections to facilities for cross-connections and backflow prevention assemblies are maintained, inspected, and tested, and that records of all maintenance, inspections, and testing are retained.

Definitions:

All definitions, hazards, equipment, procedures, and installation practices must either follow WAC 246-290 and / or the most recent edition of the *Cross-connection Control Manual - Accepted Procedure and Practice*.

All new backflow prevention assembly models that are installed on WSU property must be used either from the current approved backflow prevention assemblies list developed by the University of Southern California Foundation for Cross-connection Control and Hydraulic Research or must be listed or approved by other nationally recognized testing agencies (such as IAPMO, ANSI, or UL) acceptable to the local administrative authority. Such models are considered approved by the Department of Health (DOH). The current approved assemblies list is available from DOH upon request.

Approved air gap means a physical separation between the free-flowing end of a potable water supply pipeline and the overflow rim of an open or non-pressurized receiving vessel. To be an air gap approved by DOH, the separation must be at least:

- Twice the diameter of the supply piping measured vertically from the overflow rim of the receiving vessel, and in no case be less than one inch, when unaffected by vertical surfaces (sidewalls); and:

- Three times the diameter of the supply piping, if the horizontal distance between the supply pipe and a vertical surface (sidewall) is less than or equal to three times the diameter of the supply pipe, or if the horizontal distance between the supply pipe and intersecting vertical surfaces (sidewalls) is less than or equal to four times the diameter of the supply pipe and in no case less than one and one-half inches.

Approved atmospheric vacuum breaker means an AVB of a make, model, and size that is approved by DOH. AVBs that appear on the current approved backflow prevention assemblies list developed by the University of Southern California Foundation for Cross-connection Control and Hydraulic Research or that are listed or approved by other nationally recognized testing agencies (such as IAPMO, ANSI, or UL) acceptable to the local administrative authority are considered approved by DOH.

Approved backflow preventer means an approved air gap, an approved backflow prevention assembly, or an approved AVB. The terms "approved backflow preventer," "approved air gap," or "approved backflow prevention assembly" refer only to those approved backflow preventers relied upon by the purveyor for the protection of the public water system. The requirements of WAC 246-290-490 do not apply to backflow preventers installed for other purposes.

Approved backflow prevention assembly means an RPBA, RPDA, DCVA, DCDA, PVBA, or SVBA of make, model, and size that is approved by DOH. Assemblies that appear on the current approved backflow prevention assemblies list developed by the University of Southern California Foundation for Cross-connection Control and Hydraulic Research or other entity acceptable to DOH are considered approved by DOH.

Backflow means the undesirable reversal of flow of water or other substances through a cross-connection into the public water system or consumer's potable water system.

Backflow assembly tester means a person holding a valid BAT certificate issued in accordance with WAC 246-292.

Backpressure means a pressure (caused by a pump, elevated tank or piping, boiler, or other means) on the consumer's side of the service connection that is greater than the pressure provided by the public water system and which may cause backflow.

Backsiphonage means backflow due to a reduction in system pressure in the purveyor's distribution system and/or consumer's water system.

Cross-connection means any actual or potential physical connection between a public water system or the consumer's water system and any source of nonpotable liquid, solid, or gas that could contaminate the potable water supply by backflow.

Cross-connection control program means the administrative and technical procedures the purveyor implements to protect the public water system from contamination via cross-connections as required in WAC 246-290-490.

Cross-connection control specialist means a person holding a valid CCS certificate issued in accordance with WAC 246-292.

Cross-connection control summary report means the annual report that describes the status of the purveyor's cross-connection control program.

High health cross-connection hazard means a cross-connection which could impair the quality of potable water and create an actual public health hazard through poisoning or spread of disease by sewage, industrial liquids or waste.

In-premises protection means a method of protecting the health of WSU consumers served by the WSU building's potable water system, located within the WSU building by the installation of an approved air gap or backflow prevention assembly at the point of hazard, which is generally a plumbing fixture.

Local administrative authority means the local official, board, department, or agency authorized to administer and enforce the provisions of the Uniform Plumbing Code as adopted under chapter 19.27 RCW. The local administrative authority for all WSU water systems throughout the state is the WSU Water Board. For WSU premises or buildings that are served by a non-WSU water system, the local administrative authority is the water system purveyor that serves the WSU premises or buildings

Low health cross-connection hazard means a cross-connection that could cause an impairment of the quality of potable water to a degree that does not create a hazard to the public health, but does adversely and unreasonably affect the aesthetic qualities of such potable waters for domestic use.

Premises isolation means a method of protecting WSU public water systems by installation of approved air gaps or approved backflow prevention assemblies at or near the service connection or alternative location acceptable to the purveyor to isolate the building water system from the purveyor's distribution system.

Purveyor means a WSU department that operates a WSU public water system. Purveyor also means the authorized agents of WSU. For non-WSU water systems, the purveyor is the local administrative authority that operates the non-WSU water system.

Inspections and Surveys:

All responsible entities must have a certified Cross-connection Control Specialist inspect and survey their Group A water system facilities on an annual basis or after a backflow incident per WAC 246-290-490(7)(b). For Group B water systems and WSU facilities on non-WSU public water systems, all responsible entities must have a certified Cross-connection Control Specialist inspect and survey them as determined by the Water Board or after a backflow incident. Facilities where cross-connections are found must be prioritized and funded based on risk. The responsible entity must provide access to the results of their inspections and surveys to Facilities Operations and EH&S for performing assessments for Minor Capital Safety funding. When an existing cross-connection poses a high health or system hazard, the purveyor must shut off water service to the premises, equipment, etc. until the cross-connection has been eliminated or controlled by the installation of a proper backflow prevention assembly. The Cross-connection Control Specialist and EH&S must be notified as soon as possible whenever a high health cross-connection hazard is found and/or the water has been shut off. Existing cross-connections that do not pose a high health hazard will be eliminated or controlled by the installation of a proper backflow prevention assembly as funding

and time allows. Non-University entities, which own buildings or equipment serviced by a WSU water system, will be required to install a service meter and premises isolation or in-premises isolation (backflow prevention assemblies) as determined by the WSU Cross Connection Control Specialist.

Capital Planning and Development and Facilities Operations must inspect all new or remodeled construction involving water systems.

All backflow prevention assemblies and air gaps must be tested and/or inspected annually by a Washington State Certified Backflow Prevention Assembly Tester using Washington State approved field testing procedures. All new backflow prevention assemblies that have been installed must be tested prior to being placed into service. The Washington State Certified Backflow Prevention Assembly Tester must provide the results of testing to Facilities Operations in a timely manner.

When annual testing and documentation of backflow prevention assemblies show consistent annual failures, semi-annual tests to verify the assemblies meet design standards must be performed.

All facilities used by non-WSU organizations that are serviced by a WSU water system must comply with all elements of this program.

Fire Hydrant / Water Line Use and Backflow Prevention by Contractors:

Prior to contractors tying into fire hydrants or other water lines and using any water, they must install an approved and tested backflow prevention assembly. The contractor has two options: 1) install their own backflow prevention assembly and have a Facilities Operations Backflow Assembly Tester (BAT) inspect the assembly or; 2) check out an approved and tested assembly from Facilities Operations. In either case, the BAT must date, initial, and attach a green “Quality Control” tag must be attached to the assembly. The tag is to be displayed such that it is readily visible to interested authorities. If the contractor checked out an assembly from Facilities Operations, they must return the backflow prevention assembly in working order to Facilities Operations when they are done using the fire hydrant / water line. Failure to return the backflow prevention assembly, or if the assembly is not in working order, will result in the contractor being charged for it.

Signage of Non-Potable Water:

As required by the latest edition of the Uniform Plumbing Code (UPC), all faucets, hose bibs, etc., that supply non-potable water must have signs posted adjacent to them that state:

CAUTION: NONPOTABLE WATER
DO NOT DRINK

Per WAC 296-800-15030, all emergency showers and eyewashes using non-potable water must have signs posted adjacent to them that state water is non-potable.

Backflow Prevention Assembly Recordkeeping:

Facilities Operations must keep complete records on all dates of installations, inspections and results, recommended protection, locations of backflow prevention assemblies and air gaps in systems, testing and maintenance reports. Housing and Dining Services must maintain documentation on their respective facilities and forward a copy of such records to Facilities Operations after the completion of the certification inspections or on an annual basis, which ever occurs first. Regional campuses and research stations must maintain documentation on their respective campuses and research stations and forward a copy of such records to Facilities Operations after the completion of the certification inspections or on an annual basis, which ever occurs first. Backflow assembly test kits must be annually verified and documented for accuracy to plus or minus 0.2 full scales. Records must be made available to EH & S or the Washington State Department of Health upon request.

Risk Assessments and Prioritizing Cross-connection Control Improvements:

In order to address the elimination of cross-connections in WSU potable water systems, a prioritization of projects is required. This is necessary due to the number of cross-connections discovered each year and the amount of funding available.

An assessment of each cross-connection discovered must be performed in order to prioritize and establish funding for the project. Environmental Health and Safety and Facilities Operations must perform assessments of candidates for funding jointly.

The CCS performs the risk assessment based on WAC 246-290-490(4). Using Tables 8 and 9 from the WAC along with the most recent edition of the Cross-connection Control Manual - Accepted Procedure and Practice, the CCS must determine the degree of hazard, probability, and source of contamination associated with the cross-connection, and the number of people it could potentially affect. The following describes the criteria used to establish priorities for correction of cross-connections based on the premises isolation, in-premises isolation, degree of hazard, and number of people potentially affected:

Risk Assessment Hierarchy (1 being the highest priority, 5 being the lowest):

1. Premises Isolation of buildings with the greatest number of high health cross-connection hazards takes precedence over Premises Isolation of buildings with fewer high health cross-connection hazards. *
2. In-premises Isolation of buildings with the greatest number of high health cross-connection hazards takes precedence over In-premises Isolation of buildings with fewer high health cross-connection hazards. *
3. In-premises Isolation of buildings with the greatest number of occupants with the same amount of high health cross-connection hazards as another building takes precedence over the other building with fewer building occupants. *
4. Premises Isolation of buildings with the greatest number of low health cross-connection hazards takes precedence over Premises Isolation of buildings with fewer low health cross-connection hazards. *
5. In-premises Isolation of buildings with the greatest number of occupants with the same amount of low health cross-connection hazards as another building takes precedence over the other building with fewer building occupants. *

* In cases where two different types of cross-connection hazards exist, but both require the same type of backflow prevention assembly, the hazard that is more likely to result in

contaminated water must be prioritized higher. Example: RPBAs are required for cross-connections involving: a) chemical feed equipment plumbed directly into potable water lines, and; b) potable water that is not protected from laboratory water, where the potential for equipment to be plumbed directly into the laboratory water exists. Therefore, the chemical feed equipment would be prioritized higher, since it is plumbed into a potable water line and is pressurized, than a laboratory water line that only has the potential for equipment to be connected to it.

In the Manual, Table 4-1 lists each type of backflow prevention assembly with the level of protection it provides. Tables 4-2, 4-3 and 4-4 describe premises, facilities and fixtures, equipment and areas requiring backflow prevention with the appropriate assembly listed. Therefore, it must be assumed that if an air gap is required, it is a higher hazard than if a Reduced Pressure Backflow Assembly (RPBA) is required, etc.

Plan Review and Design Standards

All plan reviews and design standards for new or remodeled construction involving water systems must be submitted to and reviewed by Facilities Operations, the Certified Cross-connection Control Specialist, the certified Water Distribution Manager, EH&S, Housing and Dining Services (if applicable), and RCRU (if applicable). All plans and work prepared must meet Group A and B water system engineering requirements and design standards, as well as the local administrative authority if applicable. Plans must be prepared under the direction of a professional engineer licensed in Washington.

Water System Plans

The Pullman campus system is required to submit a revised water system plan every six (6) years to DOH, and small water system plans are also required for small Group A water systems (Tula Young Hastings Farm and WSU Prosser). Facilities Operations must be responsible for Whitman County water system plans and RCRU is responsible for the WSU Prosser plan.

Well Construction, Decommissioning, Maintenance, Source Approval and Interties

Facilities Operations and RCRU, with assistance from EH&S, must be responsible for obtaining source water approval, interties with other water systems, water rights, and the construction and decommissioning of all WSU wells, including agricultural, municipal, industrial, domestic or commercial wells.

Water System Modifications or Additions

Contact the Director of Architectural and Engineering Services and the Water Distribution Manager, both at Facilities Operations, regarding all modifications or additions to WSU drinking water systems.

Facilities Operations recommends that WSU Pullman departments submit requests for water system modifications or additions through the myFacilities website. See BPPM 80.45 at http://www.wsu.edu/%7Eforms/PDF/BPPM/80-45.pdf.

WSU Pullman departments unable to access or utilize the myFacilities website may submit requests for water system modifications or additions to Facilities Operations; telephone 335-9007.

Non-Pullman units are to contact Facilities Operations to submit requests for water system modifications or additions; telephone 335-9007.

All University departments, organizations, persons, or non-University entities must receive approval from Facilities Operations **before**:

- Connections to water lines. All new water system point of use connections must have a service meter and premises isolation or in-premises isolation (backflow prevention assemblies) as determined by the WSU Cross Connection Control Specialist. Additionally, Non-University entities will be required to install a service meter and premises isolation or in-premises isolation (backflow prevention assemblies) as determined by the WSU Cross Connection Control Specialist, and reimburses the University for water used. Facilities Operations Water Distribution Manager will only turn on the system water to new services after receiving certification of backflow prevention testing, and verifying the installation of appropriate metering and backflow prevention assemblies.
- Connecting equipment to water lines,
- Repairing or maintaining piping,
- Drilling a well, or
- Making any changes to water systems.

Sampling, Monitoring, Repairs, Emergency Procedures, Reporting and Recordkeeping Requirements

Sampling, Monitoring, Repairs and Emergency Procedures

Sampling and Monitoring:

EH&S, Facilities Operations and RCRU must be responsible for all bacteriological and chemical sampling (excluding construction and repair sampling) with assistance from the Water Distribution Manager on daily monitoring. For installation of new lines and systems, and repairs, Facilities Operations, Housing and Dining Services, RCRU and/or Capital Planning and Development is responsible for ensuring that chlorination meets the most recent AWWA standards, and that adequate bacteriological sampling results are obtained. All bacteriological

sampling results from construction or repair projects must be submitted to EH&S and RCRU prior to use of the water for drinking purposes. See below for bacteriological sampling procedures.

Repairs:

Required bacteriological sampling for repairs must be performed by the department making the repair. Depending upon the type of repair, the following procedures must be followed:

Repair where water pressure not lost:

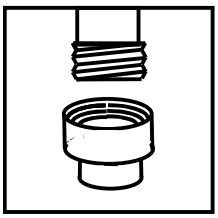
In these cases (such as a hole in a line) where only a patch is needed, the patch and hole must be properly disinfected first; however bacteriological sampling is not required.

Repair where water pressure was lost:

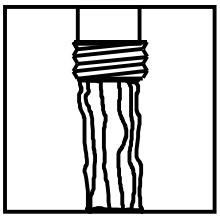
In these cases (such as a broken line) proper disinfection of lines per the most current AWWA standards and bacteriological sampling must be required. Water service to buildings can be resumed prior to obtaining satisfactory bacteriological sampling results.

NSF-approved temporary hoses may also be used when service to a building is needed as soon as possible. The temporary hose must be properly disinfected before use. After repairs have been completed, the repaired section of waterline must be disinfected according to the most current AWWA standards, flushed and a satisfactory bacteriological sample results obtained prior to placing the line back into service.

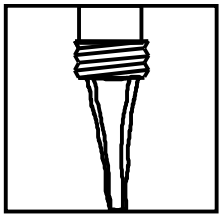
In cases where unsatisfactory sample results are obtained, the disinfection procedure, flushing and bacteriological sampling must be repeated until satisfactory results are obtained.



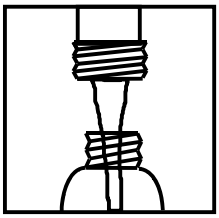
Bacteriological Sampling Procedures:



Samples must be delivered ASAP, but no later than 24 hours after being collected. EH&S or the laboratory can provide sample bottles and forms. Results are available approximately 24 hours after the laboratory has set up the sample.



- Select a faucet or hose bib that is furthest from the point where chlorine was added to the line for disinfection.
- Remove any attachment from the faucet, including aerators, screens, washers, hose, and water filters. Once all attachments are removed, dry off the inside of the tap with paper towels.
- Disinfect the tap using a lighter, matches or bleach.
- Ensure a steady stream of <u>cold water only</u> has been running for at least five minutes. Before collecting the sample, turn the water down to a thin stream (about the width of a pencil) and let the water run one minute.
- With a black permanent marker fill out the sample bottle label with building name and tap location, room #, date and time.
- Remove the plastic seal on the cap.



- To avoid contamination while taking the sample, hold the bottle near the bottom with one hand, hold the top of the cap with the other and then unscrew the cap. Do not: invert the cap, set the cap down, or touch any part of the cap that touches the bottle, or let anything touch the rim or inside of the cap. Do not touch the rim or inside of the bottle.
- There may be some liquid or powder in the sample bottle to neutralize the chlorine in the sample. Do not rinse it out.
- Hold the bottle under the constant stream of water, being careful not to touch the tap with the bottle.

Bacteriological Sampling Procedures (cont.):

Remove Attachments

Run 5 Minutes

Reduce Flow 1 Minute

Fill Bottle to Line

- Fill the bottle to the neck or indicated fill line, but do not dump any water out or allow the bottle to overflow.
- Remove the bottle from the water flow and replace the cap.
- Turn off the water and replace any attachments.
- If you feel the sample may have been contaminated, resample with a new bottle.
- If the sample(s) will not be delivered to the lab for more than three hours, store sample bottle(s) in a refrigerator or in a cooler with blue ice.

During normal business hours Monday through Thursday, samples with the completed forms must be delivered to:

Anatek Labs
1282 Alturas Drive
Moscow, ID 83483
Phone: 800-943-2839

In Moscow turn right on S Jackson St. (US 95 S or ID 8E)
Turn right onto Alturas Pkwy.
Turn left on Alturas Dr.
Anatek Labs is on the left.

On Friday, or after hours and weekends, samples and forms must be delivered to:

Whitman Hospital and Medical Center
1200 W Almota Rd.
Colfax, WA 99111
Phone: 509-397-3435

Emergency Procedures:

Departments must follow their emergency response plans and procedures.

Reporting, Public Notification and Recordkeeping

EH&S, Facilities Operations, Housing and Dining Services, Capital Planning and Development and RCRU must be responsible for all regulatory reporting and recordkeeping (excluding cross-connection control), and public notification in cases of water quality violations with assistance from the Water Distribution Manager. Facilities Operations, EH&S and RCRU is responsible for all cross-connection control recordkeeping.

Sanitary Surveys, Vulnerability Assessments, Emergency Response Plans and Wellhead Protection

Sanitary Surveys

A Qualified Sanitary Surveyor is required to perform Group A water system surveys, and EH&S and RCRU must be responsible for coordinating the surveys. Surveys are required every five (5) years.

Vulnerability Assessments and Emergency Response Plans

EH&S, Facilities Operations, Housing and Dining Services, RCRU and Public Safety must be responsible for vulnerability assessments and emergency response plans for their respective systems and facilities.

Wellhead Protection and Sanitary Control Areas

Facilities Operations, RCRU and EH&S must be responsible for maintaining wellhead protection and sanitary control areas around wellheads for Group A water systems responsible for maintaining wellhead. Group B water systems are not required to have a wellhead protection program, but are required to maintain sanitary control areas (100 foot radius) around wellheads. Facilities Operations and RCRU must ensure the wellhead protection program, when necessary, is incorporated into Water System Plans every six (6) years. EH&S and RCRU must ensure that the contaminant inventory list required for wellhead protection be updated every two (2) years with appropriate notification to regulatory and owner agencies.

Operating Permits and Water Works Operator Certification

All Group A water systems are required to have operating permits. In addition, the Pullman campus water system is required to have at least one certified Water Distribution Manager 3 (or 4) in responsible charge of the daily operational activities of the system. Smaller Group A water systems are required to have at least one certified Water Distribution Specialist.

Water Use Efficiency Rule and Water Conservation

In accordance with WAC 246-290, WSU must meet all Water Use Efficiency Rule requirements. These requirements, which include water conservation goals, are in WSU's most current Water System Plan.

Two representatives from WSU must serve on the Palouse Basin Aquifer Committee to promote water conservation at WSU facilities in Whitman County. For all other WSU water systems and facilities, the RCRU must promote water conservation at those locations.

APPENDIX F-5

Backflow Assembly Testing

Cross-Connection Control Activities (Blue)
Annual Summary Report (ASR) for 2021

PWS ID: **93200Q** PWS Name: **WASHINGTON STATE UNIVERSITY** County: **WHITMAN**

Part 1: Designated Cross-Connection Control Specialist (CCS) Information

CCS Name	Tim Leachman	CCS Phone	509-335-9345	CCS Cert. #	012145	BAT Cert. #	
CCS is: PWS owner or employee							

Part 2: Status of Cross-Connection Control (CCC) Program at End of 2021

Provide information about the status of your CCC Program at the end of the reporting year.

PWS has:			Program Plan Last Updated[3] 04/01/2016
	A written CCC Program Plan[1]	◉ Yes ○ No	
	CCC implementation activities[2]	◉ Yes ○ No	

[1] Enter "Yes" if PWS has **any** type of written CCC Program Plan, policies, or procedures. Written CCC Program Plan must be part of a Water System Plan (WSP) or Small Water System Management Program (SWSMP).

[2] Enter "Yes" if PWS implemented **any** CCC Program activities during the reporting year, such as establishing legal authority, conducting hazard evaluations, requiring installation of backflow assemblies to protect the PWS, requiring assembly testing, maintaining CCC records, or enforcing the PWS's or CCC Program requirements.

[3] PWS can update the CCC Program Plan at any time (independent of WSP or SWSMP update).

Provide information regarding PWS's specific CCC Program Elements

Program Element Number	Description of Element [See WAC 246-290-490(3)]	This Program Element is:	
		Included in Written Program Plan	Being Implemented or Is Completed
1	Legal Authority Established	◉ Yes ○ No	◉ Yes ○ No
2	Hazard Evaluation Procedures and Schedules	◉ Yes ○ No	◉ Yes ○ No
3	Procedures/Schedules for Ensuring Installation of Backflow Preventers	◉ Yes ○ No	◉ Yes ○ No
4	Certified CCS Provided	◉ Yes ○ No	◉ Yes ○ No
5	Backflow Preventer Inspection and Testing	◉ Yes ○ No	◉ Yes ○ No
6	Assembly Testing Quality Assurance/Quality Control (QA/QC) Program	◉ Yes ○ No	◉ Yes ○ No
7	Backflow Incident Response Procedures	○ Yes ◉ No	◉ Yes ○ No
8	Public Education Program	◉ Yes ○ No	◉ Yes ○ No
9	CCC Records	◉ Yes ○ No	◉ Yes ○ No
10	Reclaimed Water Permit	○ Yes ○ No ◉ N/A	○ Yes ○ No ◉ N/A

Part 3A: PWS Characteristics at End of 2021

Enter the number of connections (new and existing) served by the PWS by type.

Type of Service Connection	Number
Residential (As defined by PWS)	805
All Other (include dedicated fire lines, dedicated irrigation lines, and PWS-owned facilities such as water and wastewater treatment plants and pumping stations, parks, piers, and docks)	261
Total Number of Connections	1066

Part 3B: Cross-Connection Control for Severe and High-Hazard Premises and High-Hazard Dedicated Lines Served by the PWS

Answer the following questions carefully. These answers control your access to pages 2 and 3 for data entry.

1. Does your PWS serve any severe or high-hazard premises or any high-hazard dedicated fire or irrigation lines? ◉Yes ○No

2. Does PWS serve any high-hazard medical premises? ◉Yes ○No

- If you answer Yes to both questions, you must enter data in at least one row on page 2 and one row on page 3.
- If you answer Yes to Question 1 and No to Question 2, you must enter data on page 2 only.
- If you answer No to both questions, pages 2 and 3 will be grayed out to prevent data entry.

- Count only premises PWS serves water to.
- Report data as accurately as possible. **DOH currently bases CCC compliance actions on this information.**

Type of Severe or High-Hazard Premises or Dedicated Lines [WAC 246-290-490(4)(b)]	Number of Connections at end of 2021			
	A. Being Served Water by PWS[1]	B. With Premises Isolation by AG/RP[2]	C. With Column B AG Inspected or RP Tested[3]	D. Granted Exception from Premises Isolation
Agricultural (farms and dairies)	9	9	9	0
Beverage bottling plants (including breweries)				
Car washes	1	1	1	0
Chemical plants	3	3	3	0
Commercial laundries and dry cleaners				
Both reclaimed water and potable water provided				
Film processing facilities	1	1	1	0
Dedicated fire lines with chemical addition or using unapproved auxiliary supplies				
Food processing plants (including canneries, slaughter houses, rendering plants)	4	4	4	0
Hospitals, medical centers, medical, dental and veterinary clinics, mortuaries, nursing homes, etc., reported on Part 3C page 3 (totals imported from page 3)	9	6	6	0
Dedicated irrigation systems using purveyor's water supply and chemical addition[4]				
Laboratories	0	0	0	0
Metal plating industries				
Petroleum processing or storage plants	1	1	1	0
Piers and docks				
Radioactive material processing plants or nuclear reactors	1	1	1	
Survey access denied or restricted				
Wastewater lift/pump stations (non-residential only)	1	1	1	0
Wastewater treatment plants				
Unapproved auxiliary water supply interconnected with potable water supply				
Other				
air port	1	1	1	0
feed mill	1	1	1	0
Totals	32	29	29	0

[1] Count multiple connections or parallel installations to the same premises as **separate** connections.

[2] Count only connections with premises isolation AGs or RPs. Don't include connections with in-premises preventers only or connections with DCVAs or DCDAs installed for premises isolation. The number in Column B can't be larger than the number in Column A in the same row.

[3] Count only connections whose premises isolation preventers were inspected (AGs) or tested (RPs) during the reporting year.

[4] For example, dedicated irrigation lines to parks, playgrounds, golf courses, cemeteries, estates, etc.

[5] Premises with hazardous materials or processes (requiring isolation by AG or RP), such as aircraft and automotive manufacturers, pulp and paper mills, metal manufacturers, military bases, and wholesale customers that pose a high hazard to the PWS. May be grouped together in categories, for example:"Other manufacturing" or "Other commercial".

Part 3C: Cross-Connection Control for High-Hazard Medical Premises Served by the PWS

- Count only medical premises PWS serves water to.
- Don't count the same premises more than once. If you serve different medical category premises through a single connection, count the connection under the medical category you consider to pose the highest hazard to PWS.
- Report data as accurately as possible. **DOH currently bases CCC compliance actions on this information**

Type of High-Hazard Medical Premises [WAC 246-290-490(4)(b)]	Number of Connections at end of 2021			
	A. Being Served Water by PWS[1]	B. With Premises Isolation by AG/RP[2]	C. With Column B AG Inspected or RP Tested[3]	D. Granted Exception from Premises Isolation
Hospitals				
Hospitals (include psychiatric hospitals and alcohol and drug treatment centers)	1	1	1	0
Facilities for Treatment and Care of Patients Not Located in Hospitals Counted Above				
Same day surgery centers				
Out-patient clinics and offices	1	1	1	0
Alternative health out-patient clinics and offices				
Psychiatric out-patient clinics and offices				
Chiropractors with water-connected X-ray equipment				
Hospice care centers				
Childbirth centers				
Kidney dialysis centers				
Blood centers				
Dental clinics and offices				
Facilities for Housing Patients				
Nursing homes				
Assisted Living Facilities (formerly Boarding Homes)				
Residential treatment centers				
Other Medical-Related Facilities				
Mortuaries with embalming equipment				
Morgues and autopsy facilities (not in hospitals)	1	1	1	0
Veterinarian offices, clinics and hospitals	6	3	3	0
Totals	9	6	6	0

[1] Count multiple connections or parallel installations to the same premises as **separate** connections.

[2] Count only connections with premises isolation AGs or RPs. Don't include connections with in-premises preventers only or connections with DCVAs or DCDAs installed for premises isolation. The number in Column B can't be larger than the number in Column A in the same row.

[3] Count only connections with premises isolation AGs or RPs. Don't include connections with in-premises backflow preventers only or connections with premises isolation DCVAs or DCDAs isolation.

Part 4A: Backflow Preventer Inventory and Testing Information for 2021

- Complete all fields. Enter **zero (0)**, if no backflow preventers in a specific category.
- Count only backflow preventers relied on to protect the PWS.
- Count AVBs on *irrigation systems only*. Select No to AVB question above Table 2 if PWS doesn't track AVBs.
- Count multiple tests (or failures) for the same backflow preventer as one test (or failure) for that backflow preventer.
- For multiple service connections or parallel installations, count each assembly separately.
- Count RPDAs and DCDAs as ***single*** assemblies. Count the tests of the mainline assembly and bypass assembly as ***one test***. Count the failure of either the mainline or bypass assembly (or the failure of both) as ***one failure***. Count an entire detector assembly taken out of service as ***one assembly removed from service***.
- Count assemblies installed on dedicated fire or irrigation lines as **Premises Isolation Assemblies** in Table 1.

	Backflow Preventer Category and Inspection/Testing Information	Air Gap	RPBA	RPDA	DCVA	DCDA	PVBA	SVBA	AVB
Table 1: Premises Isolation Preventers (Include preventers isolating PWS-owned facilities)									
Existing Premises Isolation Backflow Preventers									
1	In service at beginning of 2021	0	176	2	113	1			
2	Inspected and/or tested in 2021[1]	0	176	2	113	1			
3	Failed inspection or test in 2021	0	18	0	8	0			
New Premises Isolation Backflow Preventers									
4	Installed in 2021[2]	0	0	0	1	0			
5	Inspected and/or tested in 2021[1]	0	0	0	1	0			
6	Failed inspection or test in 2021	0	0	0	0	0			
Premises Isolation Backflow Preventers (existing or new)									
7	Removed from service in 2021[3]	0	0	0	0	0			
Total Premises Isolation Preventers at End of 2021		0	176	2	114	1	0	0	0
	Does PWS track AVBs on irrigation systems? ○ Yes ◉ No								
Table 2: In-Premises Preventers (Include preventers within PWS-owned facilities)									
Existing In-Premises Backflow Preventers									
8	In service at beginning of 2021	22	571	0	154	0	52	9	unk
9	Inspected and/or tested in 2021[1]	0	571	0	154	0	52	9	unk
10	Failed inspection or test in 2021	0	48	0	4	0	0	0	unk
New In-Premises Backflow Preventers									
11	Installed in 2021[2]	0	16	0	4	0	0	1	unk
12	Inspected and/or tested in 2021[1]	0	16	0	4	0	0	1	unk
13	Failed inspection or test in 2021	0	0	0	0	0	0	0	unk
In-Premises Backflow Preventers (existing or new)									
14	Removed from service in 2021[3]	0	0	0	0	0	0	0	unk
Total In-Premises Preventers at End of 2021[4]		22	587	0	158	0	52	10	0
Grand Totals at End of 2021		22	763	2	272	1	52	10	0

[1] Initial and/or routine annual inspection (for proper installation and approval status) and/or test (for testable assemblies only, using DOH-approved USC field test procedures).

[2] Includes preventers installed on connections where backflow prevention was not previously required and any preventers that replaced those in service at the beginning of the reporting year. Replacement preventers may be of a different type than the originals.

[3] Existing or new preventers taken out of service, whether or not they were replaced by the same or a different type of preventer.

Part 4B: Other Implementation Activities in 2021

Complete all cells. Enter zero if not applicable.

Water Use Questionnaires	
Did your PWS send any water use questionnaires to customers during 2021?	○Yes ◉No

On-site Hazard Surveys				
Did your CCS conduct any on-site hazard surveys during 2021?				◉Yes ○No
	Service Connection Type			
	New	**Existing**	**Total**	
1. Number of connections surveyed for cross-connection hazards to PWS.	2	25	27	
2. Number of connections requiring backflow prevention to protect PWS.[1,2]	0	0	0	

New Exceptions to Premises Isolation	
Did your CCS grant any new premises isolation exceptions in 2021 to high-hazard premises?[3]	○Yes ◉No

CCC Enforcement Actions	
Did your PWS take any enforcement actions during 2021?[4]	○Yes ◉No

[1] Include services where either premises isolation or in-premises preventers were required to protect the PWS.

[2] Include existing services that need new, additional or higher level backflow prevention.

[3] Submit a completed DOH Exception Form (green) for each new exception granted in the reporting year.

[4] "Enforcement actions" means actions taken by the PWS (such as water shut-off, PWS installation or testing of backflow preventer, assessment of fines, etc.) when the customer fails to comply with the PWS's CCC requirements.

Part 5: Backflow Incidents and "Off-Normal" Events in 2021

	Backflow Incidents, Risk Factors, and Indicators during 2021	Number
Backflow Incidents during 2021		
1	Backflow incidents that contaminated the PWS[5].	0
2	Backflow incidents that contaminated the customer's drinking water system ***only***[5].	0
Risk Factors for Backflow during 2021		
3	Distribution main breaks per 100 miles of pipe.	4.00
4	Low pressure events (<20 psi in PWS distribution system).	0
5	Water outage events.	0
Indicators of Possible Backflow during 2021		
6	Total health-related complaints received by PWS.[6]	0
7	Received during BWA or PN events.[7]	0
8	Received during low pressure or water outage events.	0
9	Total aesthetic complaints (color, taste, odor, air in lines, etc.).	5
10	Received during BWA or PN events.[7]	0
11	Number of these complaints received during low pressure or water outage events.	0

[5] Purveyors must submit a Backflow Incident Report form for each backflow incident known to have contaminated the public water system. DOH is also interested in receiving incident report forms for backflow incidents that contaminated the customer's drinking water system only.

[6] Such as stomach ache, headache, vomiting, diarrhea, skin rashes, etc.

[7] **"BWA"** means **Boil Water Advisory** and **"PN"** means **Public Notification** for water quality reasons.

Part 6: Comments and Clarifications

- Enter comments to:
  - Explain or clarify information in this report.
  - Describe challenges faced or accomplishments made in this reporting year.
  - Share your goals and objectives for the coming reporting year.
- Delete comments that are no longer valid.

Part No.	Date Added	Comments
Pt 1	08-09-2016	as new buildings come on line, I have found contractors will cut corners including back flow preventers. constant monitoring is required to ensure assemblies are installed and tested correctly. in the past the contractor was responsible for testing the new installations and providing the test forms. in 2016 I am insisting wsu completes the initial testing of all new installations to ensure protection of the pws
Pt 1	05-26-2017	the city of Pullman is now the ahj and plumbing inspector. all new backflow inspections are submitted to the city of Pullman.
Pt 1	05-01-2018	in 2017 we purchased backflows and dedicated them to construction sites and building remodels. we found this proactive approach helped raise awareness of backflows and their role in public safety
Pt 1	05-25-2021	I recently took a promotion to supervisor, had one of the bats get the ccs certification. he is still learning the building inspection side of it but will be an asset to the program in the future
Pt 1	05-28-2021	Discovered the total number of connections was for the entire state as our ccs/bats toured the state every year. since they retired all WSU satellite campuses have their own ccs/bats. The number of connections now reflects the WSU Pullman campus only.
Pt 1	04-20-2022	The Covid definitely put a twist on the campus but we still managed take care of things. Lost a ccs and a bat to a hirer paying job, not having any luck finding replacements

Part 7: Report Certification and Contact Information

I, timothy r leachman , certify that the information in this form is true, complete and accurate to the best of my knowledge.

Last Saved	04/20/2022	**All ASR Forms Certified/Submitted**	04/20/2022

Designated CCS/CCC Program Manager[1]					
Name	Tim Leachman	**Title**	CCS	**CCS Cert #**	012145
Email Address	trleachman@wsu.edu	**Phone**	509-335-9345	**Phone Ext**	

PWS Manager[2]					
Name	Tim Leachman	**Title**	Utilities Supervisor	**Operator Cert #**	012145
Email Address	trleachman@wsu.edu	**Phone**	509-335-9345	**Phone Ext**	

[1] The CCS responsible for developing and implementing the PWS's CCC program (CCC Program Manager).

[2] The person the designated CCS/CCC Program Manager reports to or other manager having direct oversight of the CCC Program.

Cross-Connection Control Program Summary (Cream)
Annual Summary Report (ASR) for 2021

PWS ID: **93200Q** PWS Name: **WASHINGTON STATE UNIVERSITY** County: **WHITMAN**

Describe the characteristics of the PWS's Cross-Connection Control (CCC) Program at the end of 2021.

Part 1: CCC Program Characteristics

A. Type of Program Implemented

Type of Program	Check One
Premises isolation only.	○
Combination program: reliance on both premises isolation and in-premises prevention.	◉
In transition from a combination program to a premises isolation only program.	○

B. Coordination with Authority Having Jurisdiction (AHJ) on CCC Issues

Indicate the status of coordination with AHJs in your service area. The AHJ is the entity that enforces the Uniform Plumbing Code at the local level. The AHJ is usually your county or city building department. Don't list DOH as an AHJ.

AHJ #	Name of AHJ (City or County Building Department)[1]	PWS		AHJ Declined to Coordinate
		Coordinates with AHJ	Has Written Agreement with AHJ	
1	city of pullman	Yes ◉ No ○	Yes ◉ No ○	Yes ○ No ○

[1] Do not enter an individual's name.

C. Corrective/Enforcement Actions Available to the Purveyor

Type of Corrective Action/Enforcement Action	Indicate Whether Available	Most Often Used (Check One)
Purveyor denies or discontinues water service.	Yes ◉ No ○	○
Purveyor installs backflow assembly and bills customer.	Yes ◉ No ○	◉
Purveyor assesses fines (in addition to eliminating or controlling cross connection).	Yes ◉ No ○	○
Purveyor tests backflow assembly and bills customer.	Yes ◉ No ○	○

[1] Enter detailed description of other enforcement actions available to PWS. Don't enter "None", "Not Applicable", or "Not Available."

D. CCC Program Responsibilities
Do not include enforcement action related procedures or circumstances.

CCC Program Activity	Responsible Party (Check one per row)	
	Customer	Purveyor
Hazard Evaluation by DOH-certified CCS	○	◉
Backflow preventer (BP) ownership	○	◉
BP installation	○	◉
BP *initial* inspection (for proper installation - all BPs)	○	◉
BP *initial* test (for testable assemblies)	○	◉
BP *annual* inspection (Air Gaps and AVBs)	○	◉
BP *annual* test (for testable assemblies)	○	◉
BP maintenance and repair	○	◉

E. Backflow Prevention for Fire Protection Systems
Please remember to enter number of days allowed if you require retrofitting.

PWS coordinates with *AHJ* on CCC issues for fire sprinkler systems (FSSs)	Yes ○ No ○ N/A ◉
PWS coordinates with *local Fire Marshal* on CCC issues for FSSs.	Yes ◉ No ○ N/A ○
PWS ensures backflow prevention is installed before serving *new* connections with FSSs.	Yes ◉ No ○
PWS requires retrofits to *high*-hazard FSSs.	Yes ◉ No. of days allowed: 30 No ○ N/A ○
PWS requires retrofits to *low*-hazard FSSs.	Yes ◉ No. of days allowed: 30 No ○ N/A ○

F. Backflow Prevention for Irrigation Systems

Minimum level of backflow prevention required on irrigation systems *without* chemical addition.	Not Addressed ○ AVB ○ PV/SVBA ○ DCVA ◉ RPBA ○
PWS currently inspects AVBs upon *initial* installation.	Yes ◉ No ○ N/A ○
PWS currently inspects AVBs upon repair, reinstallation or relocation.	Yes ◉ No ○ N/A ○

G. Used Water

Does PWS prohibit, by ordinance, rules, policy, by-laws or agreement, the intentional return of used water (e.g. for heating or cooling) into the distribution system?	Yes ◉ No ○
If not prohibited at present, date plan to prohibit use.	N/A
Current number of service connections returning used water to distribution system.	0

H. Backflow Prevention for Unapproved Auxiliary Water Supplies[1] NOT Interconnected with PWS
Show the **minimum** backflow preventer and type of protection required for service connections having unapproved auxiliary water supplies *when they are NOT interconnected to the PWS.*

Existing **service connections.**	None ◉ DCVA ○ RPBA ○ AG ○
Type of protection required.	N/A ◉ In-premises prevention ○ Premises isolation ○
New **service connections.**	None ◉ DCVA ○ RPBA ○ AG ○
Type of protection required.	N/A ◉ In-premises prevention ○ Premises isolation ○

[1] An auxiliary water supply is any water supply on or available to customer's premises in addition to the purveyor's potable water supply.

I. Backflow Prevention for Tanker Trucks and Temporary Water Connections

Minimum **level of backflow prevention (installed on or associated with the truck) required for tanker trucks taking water from PWS.**	AG ○ DCVA ○ RPBA ◉ Not Specified ○ Tanker trucks not allowed ○
PWS requires tanker trucks to obtain water at designated fill sites each equipped with permanently installed backflow preventer(s).	Yes ◉ (Minimum preventer: DCVA ○ RPBA ◉) No ○ N/A ○ No sites provided ○
PWS currently accepts tanker trucks approved by other PWSs without further inspection or testing.	Yes ○ No ◉ N/A ○
Minimum **level of backflow prevention required for temporary water connections (e.g., for construction sites).**	AG ○ DCVA ○ RPBA ◉ Not specified ○ Temp. connections not allowed ○
PWS provides approved backflow preventer for temporary connections.	Yes ◉ No ○ N/A ○ (Temp. connections not allowed)
PWS requires testing each time the temporary connection backflow preventer is relocated.	Yes ◉ No ○ N/A ○ (Temp. connections not allowed)

J. Backflow Prevention for Non-Residential Connections

For each category shown, indicate whether PWS has non-residential connections of that type and the **minimum** level of ***premises isolation*** backflow prevention required (whether or not PWS currently has that type of customer).

Type of Connection	PWS has Customers of this Type	Minimum Premises Isolation Backflow Prevention Required
Commercial	Yes ◉ No ○	Not Required ○ DCVA ○ RPBA ◉
Industrial	Yes ◉ No ○	Not Required ○ DCVA ○ RPBA ◉
Institutional	Yes ◉ No ○	Not Required ○ DCVA ○ RPBA ◉

K. Backflow Prevention for Wholesale Customers

Indicate whether the PWS requires backflow prevention at interties with wholesale customers (other PWSs).

Type of Intertie	PWS has Customers of this Type	Minimum Backflow Prevention Required (if prevention is required, indicate minimum level).	
Existing	Yes ○ No ◉	Not specified / Not required ◉ Always required ○ Required only if purchaser's CCC program is inadequate ○	Minimum required (if applicable): DCVA ○ RPBA ○
New	Yes ○ No ◉	Not specified / Not required ◉ Always required ○ Required only if purchaser's CCC program is inadequate ○	Minimum required (if applicable): DCVA ○ RPBA ○

L. Exceptions to Mandatory Premises Isolation

PWS's written CCC Program Plan *allows* system to grant exceptions to mandatory premises isolation per WAC 246-290-490(4)(b)(iii)	Yes ○ No ◉ Doesn't Address ○
PWS currently grants new Exceptions.	Yes ○ No ◉
PWS granted Exceptions in past reporting years.	Yes ○ No ◉

Part 2: CCC Program Record-Keeping Software

Indicate the type or name of computer software the PWS uses to track CCC records.

BPMS ◉	**Cross-Track (BMI)** ○	**Tokay** ○	**XC2** ○	**Custom developed for or by PWS[1]** ○
Other non-CCC software (e.g. Excel) ○	**Other commercial CCC software (specify)** ○	**None Used** ○		

[1] Do not include commercial CCC software customized for PWS. If PWS uses customized commercial software, check the box for the appropriate commercial software name.

Part 3: Comments and Clarifications

- Enter comments to:
  - Explain or clarify information in this report.
  - Describe accomplishments made in this reporting year.
  - Identify challenges faced in this reporting year.
  - Share your goals and objectives for the coming reporting year.
- Delete comments that are no longer valid.

Part #	Date Added	Comment
General	05-25-2021	the wsu land deal went through, we had to reroute a 12 inch and a an 8 inch main. all suspected low psi were monitored while a booster pump was running. campus never got below 35 psi in any area.

Part 4: Report Certification and Contact Information

I,timothy r leachman, certify that the information in this form is true, complete and accurate to the best of my knowledge.

Last Saved	04/20/2022	**All ASR Forms Certified/Submitted**	04/20/2022

Designated CCS/CCC Program Manager[1]

[1] The CCS responsible for developing and implementing the PWS's CCC program (CCC Program Manager).

[2] The person the designated CCS/CCC Program Manager reports to or other manager having direct oversight of the CCC Program.

Backflow Prevention for Severe Health Hazard Facilities (Gray)
Annual Summary Report (ASR) for 2021

PWS ID: **93200Q** PWS Name: **WASHINGTON STATE UNIVERSITY** County: **WHITMAN**

Part 1: Backflow Prevention Status

- Describe the backflow prevention status at the end of the reporting year for each wastewater treatment plant and nuclear facility your system serves.
- If you serve more than one severe health hazard facility, click the "Add Facility" button to display another facility data entry box.
- If you serve more than one connection to the same facility, click the "Add Connection" button to display another connection row for that facility.
- You may add as many facilities and connections as needed.
- To update this form, you may delete facilities and connections which are no longer served.

Facility 1 of 1

APPENDIX F-9

Recorded Water Complaints

Drinking Water Complaints 2015 to Present

Date	Time (hours)	Location	Issue (indicate if after hours)	Recommendations / Actions
2015 to September 2017: No documented drinking water complaints.				
10/19/2017	0.33	WSU Children's Ctr	Drinking water Pb and Cu sampling	Will set up sampling of 16 faucets/fountains to comply with WAC 170-300-0235 .
1/26/2018	1	IT 2001N	Water has a smell after it sits over night	Took samples, checked for odor, but did not notice any. Submitted work request to have Fac Ops check the water. They installed a water filter.
4/11/2018	0.33	Engineering Lab Bldg 103A	Concern over potable water	Inspected area and created work request to find out where employees can obtain drinking water.
6/11/18	0.25	USDA Plant Introduction	Purchasing Water / Potable Water Question	USDA wanted to know if the water was potable and tested. Water was last tested 5-1-18 at Bldg 194C
6/19/18	0.5	Thermal Fluids	Potable Water Question	Sampled annually in September for bacteria. Inspected and confirmed sample location.
7/17/18	0.5	Lighty 360	Concern about breakroom water	Note by sink from Marty O'Malley stated to run water for 15 minutes in the morning. This was posted several years ago due to color in the water when the water stagnates in pipes over breaks. Staff in 360 did not want a water sample taken. Staff in 370 said that the water from their breakroom faucet also has color in it occasionally.
9/27/2018	0.33	Plant Intro 194C	Water smells like sulfur. USDA tested for iron bacteria and found 25 cfu/ml.	Inspected faucet and did not detect any sulfur odors. Emailed USDA back.

10/4/2018	0.33	Ferdinand's Creamery	Question on how much free chlorine in WSU water.	Provided free chlorine results at Ferdinand's for 2018 and offered to take a chlorine sample.
10/23/2018	0.25	PACCAR	Water hammer question	Referred to Utilities.
10/25/2018	0.5	Plant Intro 194C	USDA requested an iron test of the water (see 9-27 entry above)	Water was at 0 mg/L of iron.
2/7/2019	0.25	Housing and Dining Services	Question about backflow preventer testing	Referred them to FO
7/9/2019	0.5	Vet Teaching Hospital	Drinking water fountain taste complaint	Tested water for iron, hardness, pH, conductivity, and chlorine, and provided results
10/21/2019	0.5	Wegner	Drinking water sewer odor	Inspected drinking fountain and lab 329 but did not notice or taste any odors. People in the lab also have not noticed anything. Tested iron content at drinking fountain which was normal (0.5 mg/L).
10/30/2019	0.5	Housing Grounds Shop Bldg 380	Request to purchase bottled water	Determined building did not have a water source, request approved
11/6/2019	0.5	Field House 3rd Floor Rowing Team	Request to purchase bottled water	Determined 3rd floor does not have a water source, request approved
11/27/2019	0.33	Plant Intro 196A	Drinking water is cloudy	Checked the water, and due to construction in the area, air is in the water.
1/2/2020	0.33	Engineering Lab Building	Drinking Water Quality Question- conductivity, TSS	Provided most recent IOC well results.
7/1/2020	0.5	Vet-Biomed	Eye Wash water has a petroleum odor	Work order submitted to FO

7/14/2020	0.5	Golf Course Clubhouse	Chlorine taste in water	Smelled and tasted the water at the bar sink and pop machine. Both tasted fine. Tested the water for chlorine at the pop machine and found 0.03 ppm of free chlorine which is normal. Gave them a bottle to collect a sample next time they notice the problem and told them to call me.
8/6/2020	0.25	Golf Course Clubhouse	Water tastes like rubber	Water at "pop gun" in bar and at pop machine tasted fine and waitress agreed. Recommended they turn on faucets 1st thing in morning and run for 5 minutes to flush lines.
9/3/2021	0.5	Regents 225	Water is colored brown	Tested hot water in shower and bathroom sink for iron. Results were high initially (~ 1.7 mg/L) but after flushing the water for ~ 5 minutes the iron was down to 0.4 mg/L which is similar to drinking water. Scale sediment was also present initially but after flushing the faucet it went away. The RA also wanted lead and copper tested but we explained that we could take the sampled for her but she would need to pay for the sample. I also sent her Well #7 sample results from this summer with the iron at 0.432 mg/L.
10/12/2021	0.5	College 2nd Floor drinking fountain	Green particles in water	Work Order submitted in August but problem persists. Requested info from FO on what was done to the fountain.
11/4/2021	1.25	College	Green particles in water	FO decided to take a sample for copper to see if it was due to copper pipe corrosion in the fountain.

11/23/2021	0.25	College	Green particles in water	Copper sample came back below the AL so water safe to drink. Emailed results and removed sign on fountain.
1/20/2022	0.5	Rogers	Drinking Water Complaint	Gray scale particles in water fountain due to water line break at Orton. Checked water for iron which was normal. Recommended the water fountain be drained and flushed out to remove particles.
5/25/2022	0.5	Clark 299	Wanted to know if the water is potable in the room	Inspected area and determined that it used to be an old conference room with a stove and hood. Water is potable.

APPENDIX F-10

2021 Consumer Confidence Report

2021 Annual Drinking Water Quality Report
Washington State University Pullman Drinking Water System
(Public Water System #93200Q)

The U.S. Environmental Protection Agency (EPA) and the Washington Department of Health (WDOH) require that WSU Pullman's public drinking water system routinely provide an annual drinking water quality report to its consumers. This annual report explains where WSU Pullman's drinking water comes from, what it contains, and the sampling, testing, and treatment that is done to provide safe drinking water.

If future samples show that the drinking water is not safe to consume, EPA and WDOH requires that WSU notify consumers immediately.

Summary of the Report

EPA and WDOH require that public drinking water systems sample and analyze their water for:

- Microbial contaminants, such as bacteria (coliforms), which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic Chemical contaminants (IOCs), such as salts, minerals and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Organic chemical contaminants, including Synthetic Organic Chemicals (SOCs), Volatile Organic Chemicals (VOCs), and Disinfection Byproducts, which can be by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, septic systems, and chlorine disinfection reacting with organic chemicals.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.
- Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to help EPA determine their occurrence in drinking water and potential need for future regulation.

The frequency and number of drinking water samples and tests for contaminants varies each year depending on the source of drinking water (groundwater vs. surface water sources [WSU Pullman has groundwater sources]), vulnerability of the sources to contamination, the size of the system, the type of distribution system piping (metal, plastic, asbestos/concrete), and previous sample results.

WSU chlorinates its drinking water daily to prevent microbial contamination. The chlorine levels are monitored continuously and WSU takes at least 295 chlorine and microbial samples each year.

The WDOH reduced the monitoring requirements for WSU for Inorganic Chemicals (IOCs), Synthetic Organic Chemicals (SOCs), and Volatile Organic Chemicals (VOCs) because WSU's wells are at a low to moderate risk of contamination.

The most recent SOCs (Herbicides) were obtained on 3-26-20. The most recent VOCs and Nitrates were obtained on 5-14-20. The most recent Disinfection Byproduct samples were obtained on 7-30-21. All contaminants listed above were Not Detected, and therefore not listed in the table below. WSU also sampled for unregulated contaminants in 2020 with the results listed below.

Sources of WSU's Drinking Water

The WSU water system is supplied by groundwater from the Palouse Basin Aquifer. Drinking water is pumped from four (4) groundwater sources (wells) on campus (well #4 [source S04], well #6 [source S06], well #7 [source S08], and well #8 [source S09]). The WSU water system is separate from the City of Pullman system except for four emergency interties. WDOH has Source Water Assessment Program data on the WSU water system which includes the susceptibility rating of potential contamination for each well on campus. For more information contact the WDOH at (509) 329-2100.

The table below displays reportable contaminants in the most recent samples required by the WDOH and EPA, the range of detections, typical sources of contamination, units of measurement, whether there was a violation, with a key and footnotes explaining the test results.

An Explanation of the Drinking Water Quality Table

Please note the following definitions:
Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.
Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
Maximum Residual Disinfectant Level (MRDL): The highest level of chlorine disinfectant allowed in the drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
Maximum Residual Disinfectant Level Goal (MRDLG): The level of chlorine disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water. The WSU system uses chlorine as the TT intended to reduce the level of microbial contaminants in the drinking water.

Contaminant [1]	Date Sampled	Range of Detections [2]	Unit	MCL	MCLG	Typical Source of Contaminant	Violation
Contaminants with Primary MCLs							
Barium	4-14-21	66.7	ppb	2000	2000	Erosion of natural deposits	No
Copper	5-11-21 to 6-30-21	6.33 – 217 [3]	ppb	AL = 1300	0	Corrosion of household plumbing systems; Erosion of natural deposits	No
Lead	5-11-21 to 6-30-21	ND – 8.0 [3]	ppb	AL = 15	0	Corrosion of household plumbing systems; Erosion of natural deposits	No
Fluoride	4-14-21	388	ppb	4000	4000	Erosion of natural deposits	No

Gross Alpha	6-9-21 6-22-21	<3± 0.323 to <3 ± 0.348	pCi/l	15	–	Erosion of natural deposits	No
Radium 228	6-9-21 6-22-21	<1± 0.341 to <1 ± 0.345	pCi/l	5	–	Erosion of natural deposits	No
Selenium	4-14-21	0.00165	ppm	50	50	Erosion of natural deposits	No
Contaminants with Secondary MCLs [5]							
Iron	4-14-21	0.432	ppm	0.3	NA	Erosion of natural deposits	No
Manganese	4-14-21	0.0518	ppm	0.05	NA	Erosion of natural deposits	No
Chloride	4-14-21	3.93	ppm	250	NA	Erosion of natural deposits	No
Sulfate	4-14-21	1.96	ppm	250	NA	Erosion of natural deposits	No
Zinc	4-14-21	0.00785	ppm	5	NA	Erosion of natural deposits	No
Conductivity	4-14-21	351	umhos/ cm	700	NA	Erosion of natural deposits	No
Total Dissolved Solids	4-14-21	252	ppm	500	NA	Erosion of natural deposits	No
Sodium	4-14-21	23.8	ppm	NA	NA	Erosion of natural deposits	No [4]
Unregulated Contaminants (UCMR4)							
Bromide	8-31-20	~ 0.0259 to 0.0363	ppm	NA	NA	Erosion of natural deposits	NA
Germanium	8-31-20	~ 0.00012 to 0.00013	ppm	NA	NA	Erosion of natural deposits	NA
Manganese	7-28-20 8-31-20	0.0547 to 0.0138	ppm	NA	NA	Erosion of natural deposits	NA
Daily Chlorination for Microbial Control							
Chlorine (Residual)	Daily	0 – 0.26	ppm	4 MRDL	2 MRDLG	Water additive to control microbes	No

Key:
AL = Action Level, the concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow
MCL = Maximum Contaminant Level
MCLG = Maximum Contaminant Level Goal
MRDL = Maximum Residual Disinfectant Level
MRDLG = Maximum Residual Disinfectant Level Goal
NA = Not Applicable
Key:
ND = Not Detected
pCi/l = picocuries per liter
ppb = parts per billion or micrograms per liter (ug/l)
ppm = parts per million or milligrams per liter (mg/l)
umhos/cm = micromhos per centimeter (a measure of conductivity)

Footnotes:
[1] Only the most recent samples with contaminants found in the water are listed.
[2] The lowest to highest detected contaminant levels from any well or distribution sample are reported.

[3] Thirty (30) samples were analyzed. None of the lead or copper samples were above the Action Level. The 90th percentile sample (out of every 10 samples, 9 were at or below this level) was 5.98 ppb for lead and 170 ppb for copper. This does not trigger treatment, more sampling or other sampling requirements. If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. In Washington State, lead in drinking water comes primarily from materials and components used in household plumbing. The more time water has been sitting in pipes, the more dissolved metals, such as lead, it may contain. Elevated levels of lead can cause serious health problems, especially in pregnant women and young children. To help reduce potential exposure to lead, for any drinking water tap that has not been used for 6 hours or more, flush water through the tap until the water is noticeably colder before using for drinking or cooking. You can use the flushed water for watering plants, washing dishes, or general cleaning. Only use water from the cold-water tap for drinking, cooking, and especially for making baby formula. Hot water is likely to contain higher levels of lead. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water is available from EPA's Safe Drinking Water Hotline at 1-800-426-4791 or online at http://www.epa.gov/safewater/lead.

[4] The EPA has established a recommended level of 20 ppm for sodium as a level of concern for those consumers that may have daily sodium intake restrictions in their diets.

[5] Secondary MCLs are standards developed to protect the aesthetic qualities of drinking water and are not health based. Because they are not health based, they are not considered violations.

Unregulated Contaminants

WSU drinking water comes from groundwater, and is not required to sample for *Cryptosporidium* since it is usually found only in surface waters.

Additional Health Information

To ensure that tap water is safe to drink, the Department of Health and EPA prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The Food and Drug Administration (FDA) and the Washington Department of Agriculture regulations establish limits for contaminants in bottled water that must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline (800) 426-4791.

The sources of drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals, and in some cases, radioactive material. Water can also pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria (coliforms), which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts, minerals and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.

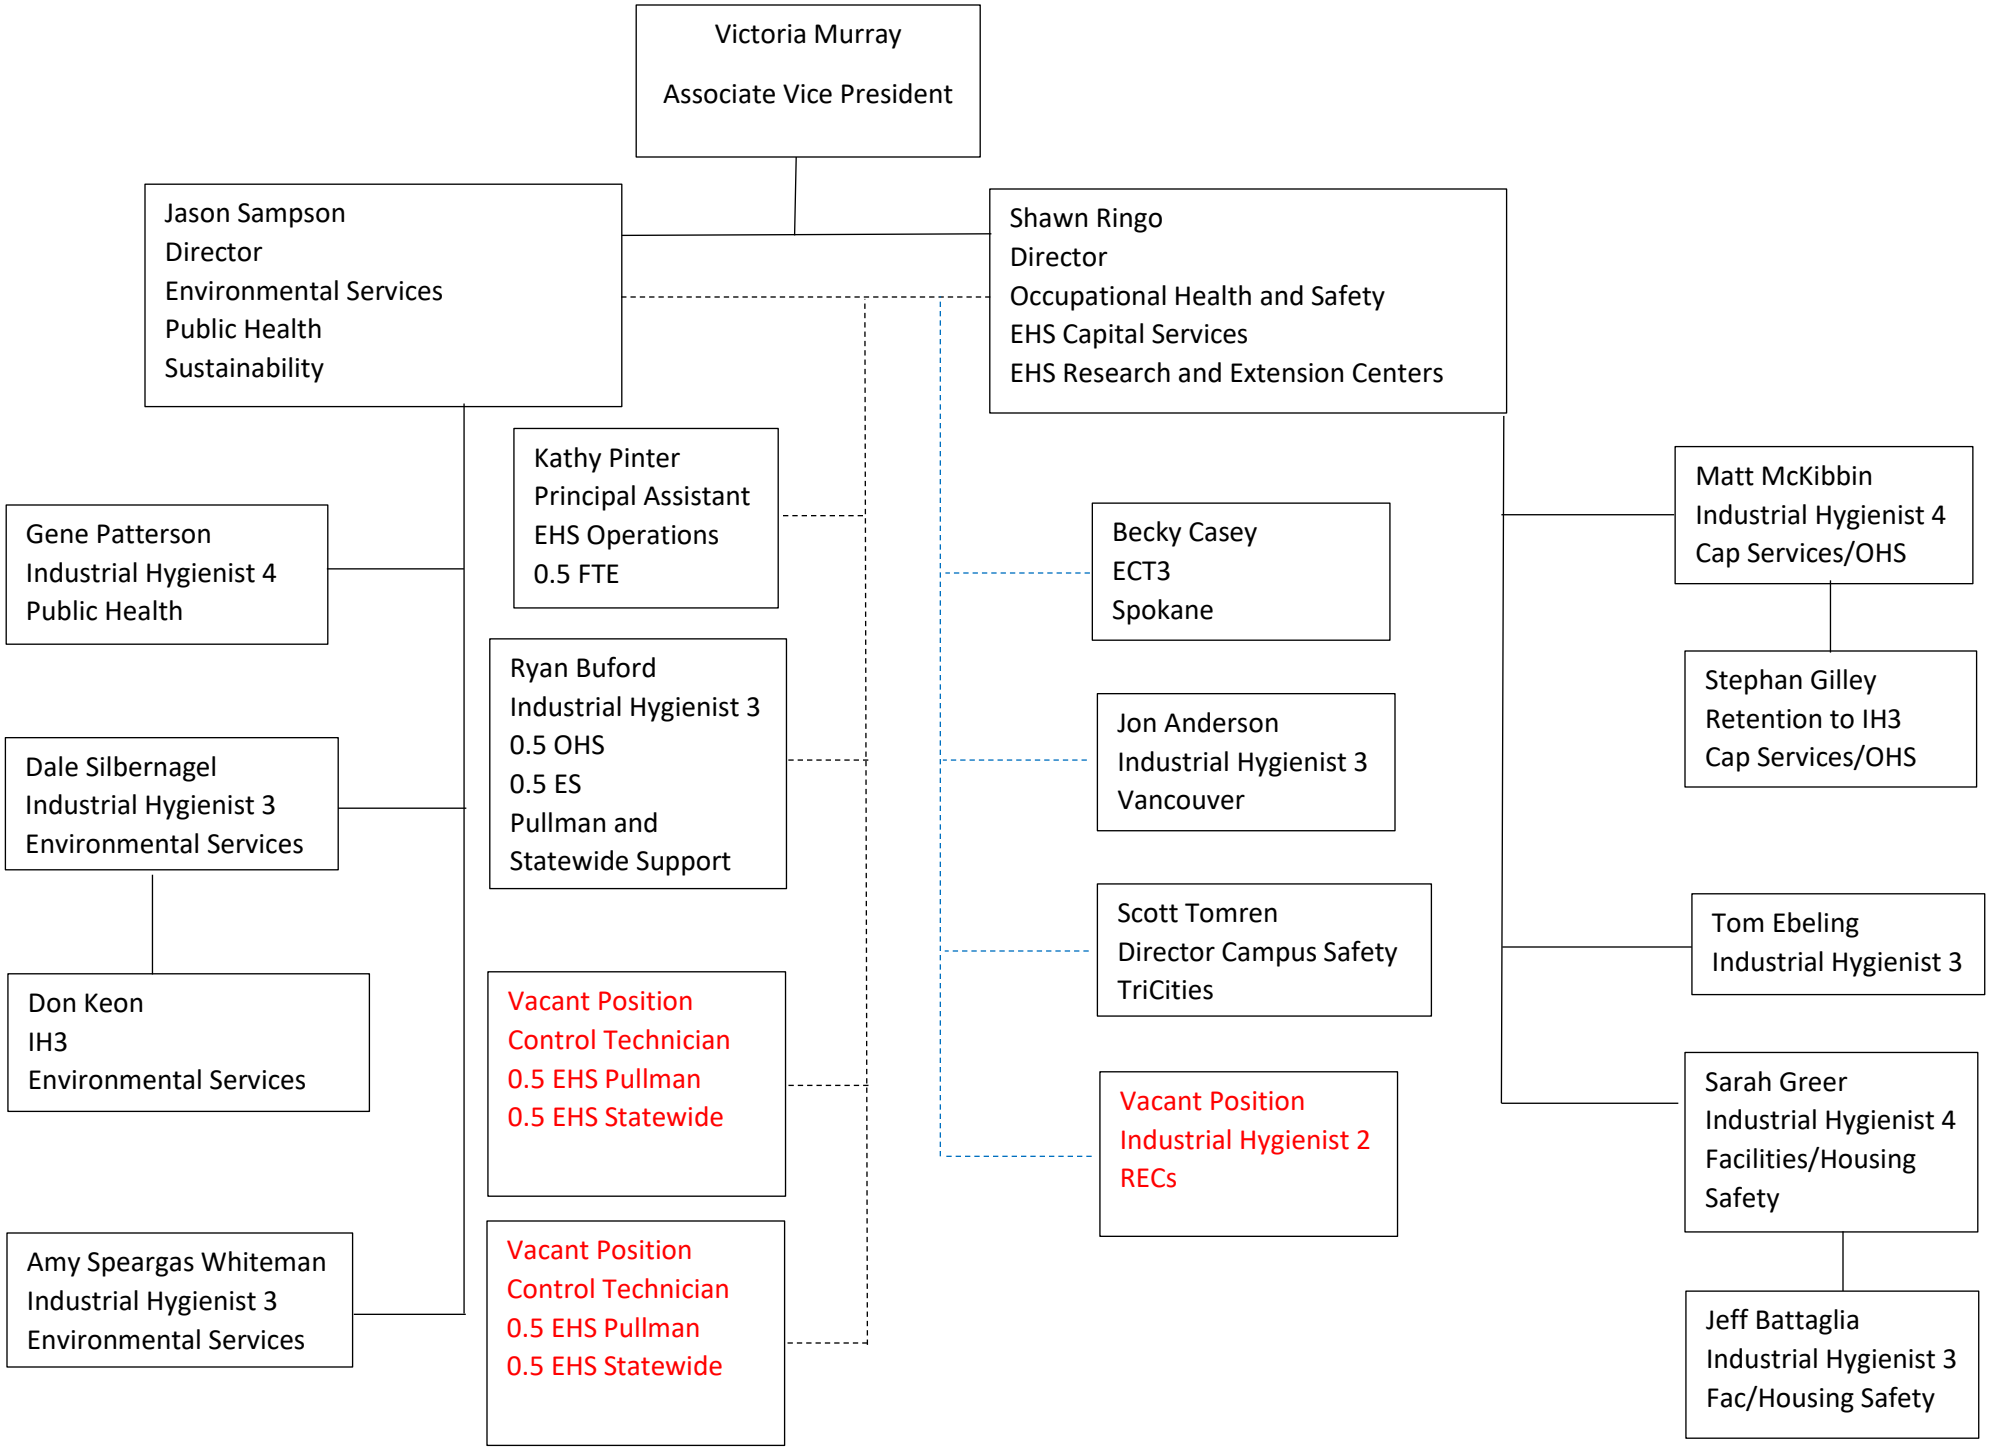
- Organic chemical contaminants, including SOCs and VOCs, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV / AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA / Center for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800) 426-4791.

WSU is active in protecting the health and safety of students, faculty, staff and visitors of the University, and we will notify you immediately if the drinking water is not safe to consume.

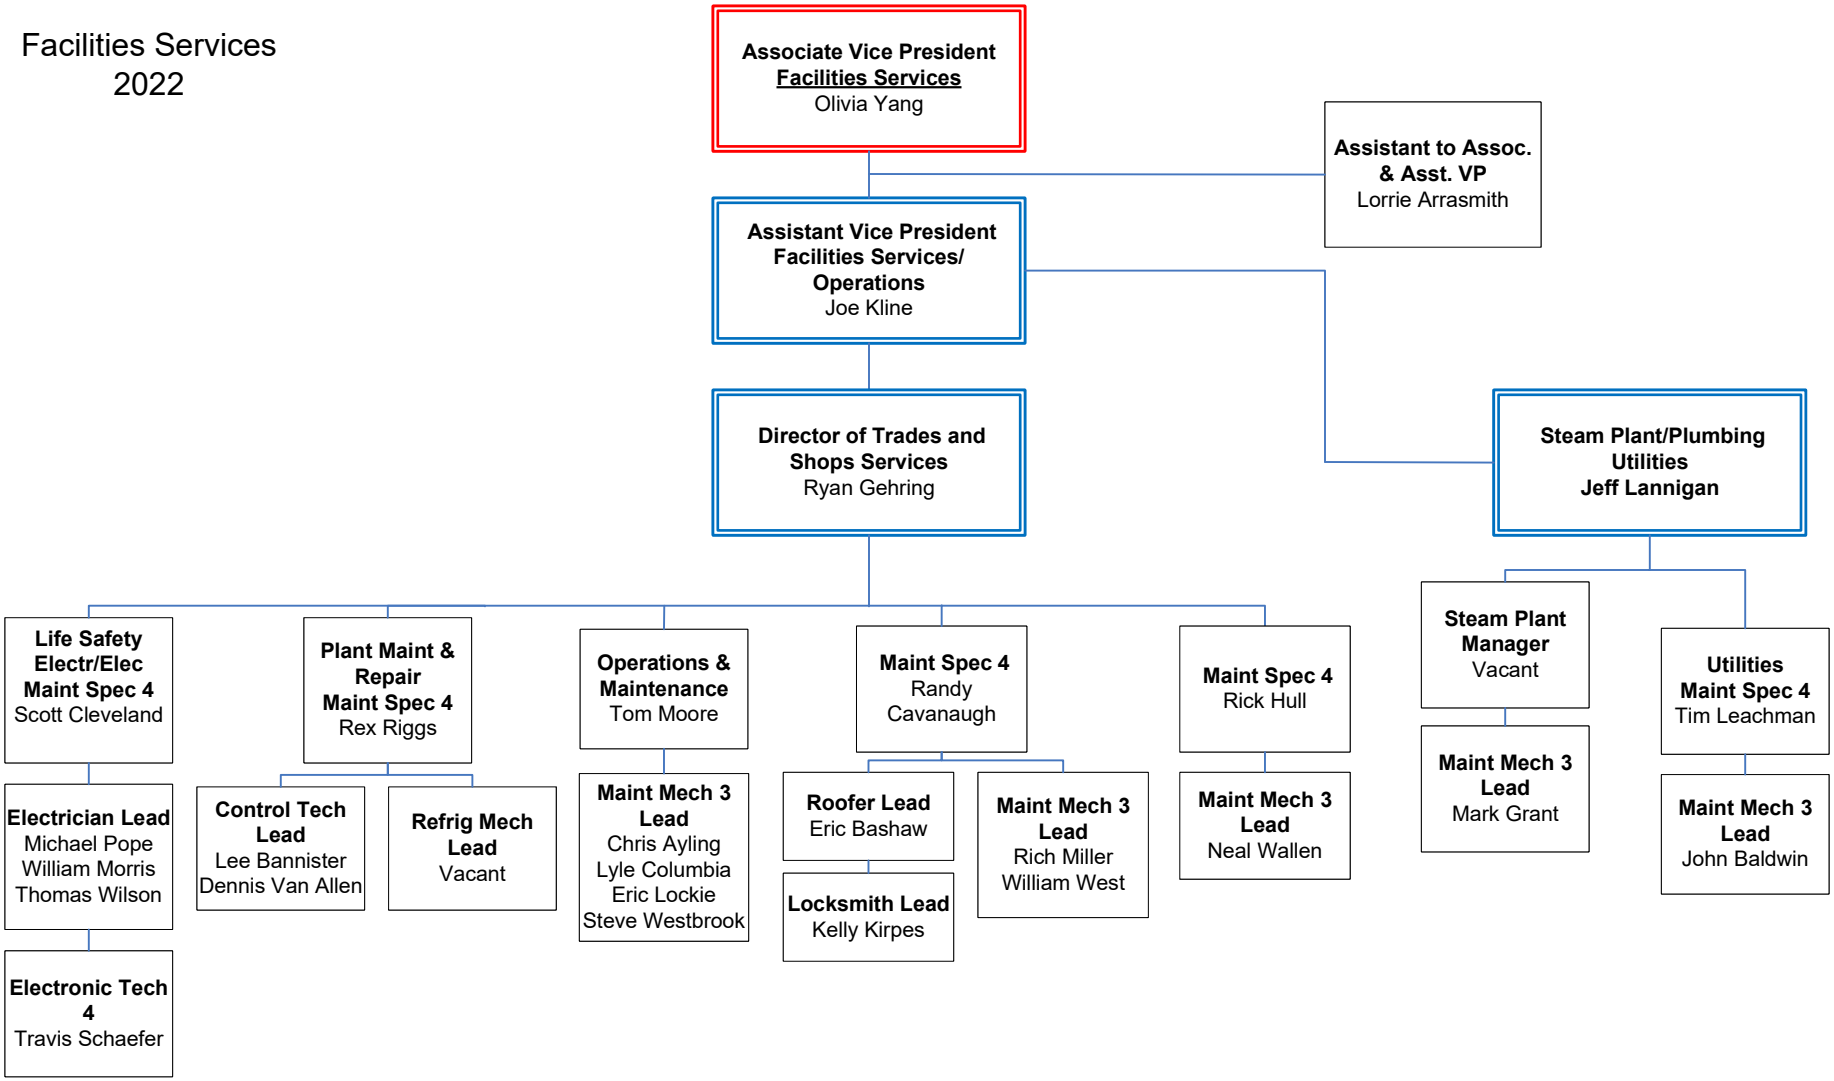
For More Information

The WSU Water Board is responsible for ensuring that the water system conforms to all applicable regulations. If you are interested in attending a Water Board meeting, contact Environmental Health and Safety (EH&S) 335-3041 for the next meeting time and date.



This report was prepared by EH&S, and is available at the WSU web sites below:

https://ehs.wsu.edu/public-health/drinking-water-quality/



For more information about the WSU water system, please contact Gene Patterson at 509-335-3041, via email at gpatters@wsu.edu or the WSU Environmental Health and Safety web page at http://ehs.wsu.edu/. Additional information is available from EPA at http://water.epa.gov/drink/.

APPENDIX F-12

MSDS Chlorine Gas

Material Safety Data Sheet

Chlorine

Section 1. Chemical product and company identification

Product Name : Chlorine

Supplier : AIRGAS INC., on behalf of its subsidiaries
259 North Radnor-Chester Road
Suite 100
Radnor, PA 19087-5283
1-610-687-5253

Product use : Synthetic/Analytical chemistry.

MSDS# : 001015

Date of Preparation/Revision : **2/25/2007.**

In case of emergency : 1-866-734-3438

Section 2. Hazards identification

Physical state : Gas. (GREENISH-YELLOW GAS WITH SUFFOCATING ODOR)

Emergency overview : Danger!

MAY BE FATAL IF INHALED.
CAUSES SEVERE RESPIRATORY TRACT, EYE AND SKIN BURNS.
OXIDIZER.
CONTENTS UNDER PRESSURE.
CAUSES DAMAGE TO THE FOLLOWING ORGANS: LUNGS, RESPIRATORY TRACT, SKIN, EYE, LENS OR CORNEA.
Contact with combustible material may cause fire.

Do not get in eyes, on skin or clothing. Do not breathe gas. Do not puncture or incinerate container. Store in tightly closed container. Avoid contact with combustible materials. Use only with adequate ventilation. Wash thoroughly after handling.

Contact with rapidly expanding gases can cause frostbite.

Routes of entry : Inhalation,Dermal,Eyes

Potential acute health effects

Eyes : Severely corrosive to the eyes.

Skin : Severely corrosive to the skin.

Inhalation : Very toxic by inhalation. Severely corrosive to the respiratory system.

Ingestion : Ingestion is not a normal route of exposure for gases

Potential chronic health effects : **CARCINOGENIC EFFECTS** A4 (Not classifiable for human or animal.) by ACGIH.
MUTAGENIC EFFECTS Not available.
TERATOGENIC EFFECTS: Not available.

Medical conditions aggravated by overexposure : Repeated exposure to a highly toxic material may produce general deterioration of health by an accumulation in one or many human organs.

See toxicological Information (section 11)

Section 3. Composition, Information on Ingredients

Name	CAS number	% Volume	Exposure limits
Chlorine	7782-50-5	100	**ACGIH TLV (United States, 5/2004). Notes: 1996 Adoption Substances for which the TLV is higher than the OSHA Permissible Exposure Limit (PEL) and/or the NIOSH Recommended Exposure Limit (REL). See CFR 58(124) :36338-33351, June 30, 1993, for revised OSHA PEL. Refers to Appendix A -- Carcinogens.** STEL: 2.9 mg/m^3 15 minute(s). Form: All forms

STEL: 1 ppm 15 minute(s). Form: All forms
TWA: 1.5 mg/m^3 8 hour(s). Form: All forms
TWA: 0.5 ppm 8 hour(s). Form: All forms

NIOSH REL (United States, 6/2001).
CEIL: 1.45 mg/m^3 15 minute(s). Form: All forms
CEIL: 0.5 ppm 15 minute(s). Form: All forms

OSHA PEL (United States, 6/1993).
CEIL: 3 mg/m^3 Form: All forms
CEIL: 1 ppm Form: All forms

Section 4. First aid measures

No action shall be taken involving any personal risk or without suitable training.If fumes are still suspected to be present, the rescuer should wear an appropriate mask or a self-contained breathing apparatus.It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation.

Eye contact : In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention immediately.

Skin contact : In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention immediately.

Frostbite : Try to warm up the frozen tissues and seek medical attention.

Inhalation : If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention immediately.

Ingestion : Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. Get medical attention immediately.

Section 5. Fire fighting measures

Flammability of the product : Non-flammable.

Fire fighting media and instructions : Use an extinguishing agent suitable for surrounding fires.

This material increases the risk of fire and may aid combustion. Contact with combustible material may cause fire.

Special protective equipment for fire-fighters : Fire fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full facepiece operated in positive pressure mode.

Section 6. Accidental release measures

Personal precautions : Immediately contact emergency personnel. Eliminate all ignition sources. Keep unnecessary personnel away. Use suitable protective equipment (Section 8). Do not touch or walk through spilled material.

Environmental precautions : Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

Section 7. Handling and storage

Handling : Do not get in eyes, on skin or on clothing. Keep container closed. Use only with adequate ventilation. Store in tightly closed container. Avoid contact with combustible materials. Do not puncture or incinerate container. Wash thoroughly after handling. High pressure gas. Use equipment rated for cylinder pressure. Close valve after each use and when empty. Protect cylinders from physical damage; do not drag, roll, slide, or drop. Use a suitable hand truck for cylinder movement.

Storage : Keep container tightly closed. Keep container in a cool, well-ventilated area. Cylinders should be stored upright, with valve protection cap in place, and firmly secured to prevent falling or being knocked over. Cylinder temperatures should not exceed 52 °C (125 °F).

Section 8. Exposure Controls, Personal Protection

Engineering controls : Use only with adequate ventilation. If user operations generate dust, fumes, vapor or mist, use process enclosures, local exhaust ventilation, or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits.

Personal protection

Eyes : Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists or dusts.

Skin : Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Respiratory : Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary.Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

The applicable standards are (US) 29 CFR 1910.134 and (Canada) Z94.4-93

Hands : Chemical-resistant, impervious gloves or gauntlets complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary.

Personal protection in case of a large spill : Full chemical resistant suit and self-contained breathing apparatus only by trained and authorized persons.

Consult local authorities for acceptable exposure limits.

Section 9. Physical and chemical properties

Molecular weight : 70.9 g/mole

Molecular formula : Cl2

Boiling/condensation point : -33.88°C (-29°F)

Melting/freezing point : -101.11°C (-150°F)

Critical temperature : 143.9°C (291°F)

Vapor pressure : 85.3 psig

Vapor density : 2.4 (Air = 1)

Specific Volume (ft^3/lb) : 5.40541

Gas Density (lb/ft^3) : 0.185

Section 10. Stability and reactivity

Stability and reactivity : The product is stable.

Incompatibility with various substances : Extremely reactive or incompatible with reducing agents, combustible materials, organic materials, alkalis.

Hazardous decomposition products : These products are halogenated compounds, hydrogen chloride.

Section 11. Toxicological information

Toxicity data

Ingredient name	Test	Result	Route	Species
Chlorine	LC50	293 ppm (1 hour (s))	Inhalation	Rat
	LC50	137 ppm (1 hour (s))	Inhalation	Mouse

IDLH : 10 ppm

Chronic effects on humans : **CARCINOGENIC EFFECTS** A4 (Not classifiable for human or animal.) by ACGIH. Causes damage to the following organs: lungs, upper respiratory tract, skin, eye, lens or cornea.

Other toxic effects on humans : Hazardous in case of skin contact (irritant), of eye contact (irritant), of inhalation (lung irritant).

Specific effects

Carcinogenic effects : No known significant effects or critical hazards.

Mutagenic effects : No known significant effects or critical hazards.

Reproduction toxicity : No known significant effects or critical hazards.

Section 12. Ecological information

Ecotoxicity data

Ingredient name	Species	Period	Result
Chlorine	Oncorhynchus mykiss (LC50)	96 hour(s)	0.014 mg/l
	Oncorhynchus mykiss (LC50)	96 hour(s)	0.029 mg/l
	Oncorhynchus mykiss (LC50)	96 hour(s)	0.132 mg/l
	Oncorhynchus mykiss (LC50)	96 hour(s)	0.159 mg/l
	Oncorhynchus mykiss (LC50)	96 hour(s)	0.192 mg/l
	Oncorhynchus mykiss (LC50)	96 hour(s)	0.291 mg/l

Products of degradation : These products are halogenated compounds.

Toxicity of the products of biodegradation : The products of degradation are less toxic than the product itself.

Environmental fate : Not available.

Environmental hazards : Very toxic to aquatic organisms.

Toxicity to the environment : Not available.

Section 13. Disposal considerations

Product removed from the cylinder must be disposed of in accordance with appropriate Federal, State, local regulation.Return cylinders with residual product to Airgas, Inc.Do not dispose of locally.

Section 14. Transport information

Regulatory information	UN number	Proper shipping name	Class	Packing group	Label	Additional information
DOT Classification	UN1017	CHLORINE. Marine pollutant (Chlorine)	2.3	Not applicable (gas).		**Marine pollutant** Marine pollutant (P) **Reportable quantity** 10 lbs. PURPOSE

The University is responsible for planning, operating, sampling, maintaining, and protecting University-owned public drinking water systems and water supply connections to meet federal, state, and local requirements. The University is also responsible for helping to ensure that the quality of water which WSU facilities receive from non-WSU public water systems meets state and federal requirements. (WAC Chapters 246-290 to -296, WAC 173-160, WAC 51-56)

REPORTING CONCERNS OR EMERGENCIES

Water Leaks or Lack of Service

Report water leaks or lack of service to the one of the following offices, as appropriate:

In Whitman County

In Whitman County, immediately contact Facilities Services, Operations at 509-335-9000.

Outside Whitman County

All other WSU locations are to immediately contact the local facilities maintenance organization.

Drinking Water Quality Concerns or Suspected Illnesses

Report drinking water quality concerns or suspected illnesses from drinking water immediately to Environmental Health and Safety (EH&S) for prompt investigation.

In Whitman County

For water systems within Whitman County, use the following contact telephone numbers:

During Regular Working Hours

Contact EH&S; telephone 509-335-3041.

During Off-Hours

Contact Facilities Services, Operations; telephone 509-335-9000.

Outside Whitman County

For all other water systems, use the following contact telephone numbers, as appropriate:

During Regular Working Hours

Contact Statewide EH&S Services-Regional Campuses and Research Units at or near the following locations; telephone:

- Spokane 509-358-7993
- Tri-Cities 509-372-7163
- Vancouver 360-546-9706
- Wenatchee 509-663-8181, ext. 230

To obtain EH&S telephone numbers for other statewide locations, go to the Statewide EH&S website at:

http://www.tricity.wsu.edu/BC-RS/statewide.asp

Select a location to obtain the telephone number for the EH&S representative assigned to the location.

During Off-Hours

Contact the local public water system or the Whitman County Communications Center (WHITCOM) Non-Emergency Response; telephone 509-332-2521. WHITCOM is able to assist by contacting the appropriate local agencies.

WSU Spokane

At WSU Spokane, contact Campus Security; telephone 509-358-7995. For emergencies, Campus Security must contact the City of Spokane Water Department; telephone 509-625-7800.

WATER SYSTEM MODIFICATIONS OR ADDITIONS

Contact the Architectural and Engineering Manager and the Water Distribution Manager, both at Facilities Services, Operations, regarding all modifications or additions to WSU drinking water systems.

Facilities Services, Operations recommends that WSU Pullman departments submit requests for water system modifications or additions through the myFacilities website. See BPPM 80.45. The myFacilities website is located at:

https://myfacilities.wsu.edu

WSU Pullman departments unable to access or utilize the myFacilities website may submit requests for water system modifications or additions to Facilities Services, Operations; telephone 335-9000.

Non-Pullman units are to contact facilities services, operations managers at their locations who submit requests for water system modifications or additions to Pullman Facilities Services, Operations; telephone 335-9000.

See also below.

All University departments, organizations, persons, or non-University entities must receive approval from Facilities Services, Operations **before**:

- Connecting equipment to water lines,
- Repairing or maintaining piping,
- Drilling a well, or
- Making any changes to water systems.

Connecting to Water Lines

Each new water system point of use connection must have a service meter and premises isolation or in-premises isolation (backflow prevention assemblies) as determined by the WSU Cross Connection Control Specialist.

Non-University entities are required to install service meters and premises isolation or in-premises isolation (backflow prevention assemblies) as determined by the WSU Cross Connection Control Specialist. Non-University entities must also reimburse the University for water used.

The Facilities Services, Operations Water Distribution Manager must receive certification of backflow prevention testing and verify the installation of appropriate metering and backflow prevention assemblies **prior** to turning on the system water to new services.

WATER BOARD

The Water Board is responsible for ensuring that University water systems and facilities conform to applicable regulations.

The board is comprised of staff or representatives from:

- Facilities Services, Operations,
- EH&S,
- Regional Campuses and Research Units (RCRU),
- Housing and Dining Services, and
- Facilities Services, Capital.

The Water Board is also responsible for coordinating the planning, operation, sampling, maintenance, and protection of the University's public drinking water systems and water supply connections throughout the state in order to meet state requirements. (WAC 246-290 through WAC 246-296, WAC 173-160, and WAC 51-56)

Program Document

The Water Board develops all policies and procedures in the WSU Drinking Water, Cross-connection Control, and Water Conservation Program (hereinafter referred to as the Program). The Program provides detailed planning, development, construction, maintenance, sampling, monitoring, and operating procedures to ensure that University drinking water systems are maintained and operated in a safe and cost-effective manner.

The most current version of the Program is located on the WSU Environmental Health and Safety Public Health website under drinking water. To view the Program, go to:

http://ehs.wsu.edu/

Select Public Health, then
Select Drinking Water Quality, then
Select Drinking Water Program.

Board Member Positions

The Water Board is co-chaired by the Facilities Services, Operations and EH&S directors. Regional Campus and Research Unit representatives assign appropriate staff members to serve on the board. The Water Board meets at least annually.

The Board is comprised of the following positions:

- Facilities Services, Operations

  Assistant Vice President
  Director, Maintenance and Utilities Services
  Water Distribution Manager
  Water System Engineer

- Environmental Health and Safety

  Director
  Public Health Manager
  Facility Health and Safety Coordinator

- Regional Campuses and Research Units (RCRU)

  WSU Spokane--Facility Services Director
  WSU Tri-Cities--Facilities Department Manager
  WSU Vancouver--Facilities Operations Director
  Director, CAHNRS Business and Personnel Office

- Facilities Services, Capital

  Director, Construction Service and Quality Assurance
  Project Manager / Professional Engineer

- Housing and Dining Services

  Director, Housing and Dining Maintenance Services
  Industrial Hygienist
  Maintenance Coordinator

RESPONSIBILITIES

Water Board

The Water Board:

- Develops all drinking water programs, policies, and procedures for WSU.

- Helps protect drinking water systems and water supply connections including, but not

limited to, establishing and enforcing cross-connection control programs.

- Performs and enforces corrective actions.
- Ensures that qualified personnel are provided to develop and implement all applicable programs.
- Develops schedules for performing risk assessments.
- Develops a quality assurance program for backflow prevention assembly testing.
- Develops procedures for responding to drinking water quality and backflow incidents.
- Provides educational programs for consumers about drinking water systems, conservation, cross-connection controls, etc.
- Coordinates with and notifies the Department of Health (DOH), local administrative and/or health authorities of any incidents, and documents the incidents.

Facilities Services, Operations

Facilities Services, Operations:

- Operates and maintains all Group A and B water systems located in Whitman County, excluding the Palouse Conservation Field Station, which is operated by the U.S. Department of Agriculture (USDA) and maintained and repaired by Facilities Services, Operations. See below for water system definitions.
- Conducts limited monitoring of the drinking water system.
- Provides a certified Water Distribution Manager who is responsible for the daily operational activities of the Whitman County water systems, treatment facilities, and distribution systems that directly impact water quality and/or quantity as required in accordance with WAC 246-292.
- Coordinates water conservation efforts.
- Coordinates master planning with the Infrastructure Master Planning Committee.

  NOTE: The committee is comprised of engineering staff from Facilities Services, Capital and Facilities Services, Operations.
- Is responsible, along with Facilities Services, Capital and RCRU, for the design and construction of additions and modifications to University drinking water systems throughout the state.

  The Utilities division of Facilties Services, Operations must review and approve all plans and specifications for new and remodeled construction.
- Provides bacteriological and chlorine disinfection water sampling for construction and repairs (or oversees the contractor that performs the sampling), with assistance from EH&S, Housing and Dining Services, RCRU, and/or Facilities Services, Capital.

Prior to water being used for drinking purposes, Facilities Services, Operations must:

Test all new backflow prevention assemblies (Whitman County),

Obtain backflow prevention assembly testing results from RCRU or contractors (outside of Whitman County), and

Obtain satisfactory bacteriological sample results from repairs or maintenance (Whitman County).

Facilities Services, Operations (or the contractor, if applicable) must provide the bacteriological sample results to EH&S.

- Provides alternative drinking water sources if construction and/or maintenance requires disruption of water service on a case by case basis.

Environmental Health and Safety (EH&S)

EH&S:

- Conducts bacteriological and chemical sampling for Whitman County water systems (excluding construction and repair samples), as required by federal and state regulations.

  NOTE: Facilities Services, Operations or the contractor performs sampling for water system construction and repairs. See above.

- Assists Facilities Services, Operations, RCRU, and contractors with sampling responsibilities for water systems at WSU locations around the state.

- Investigates concerns regarding drinking water quality and performs sanitary surveys of drinking water systems, including wells, reservoirs, distribution systems, and treatment facilities.

- Reviews plans and specifications for new construction and remodels.

- Evaluates current and new regulations to help ensure the University remains in compliance and maintains safe and healthy drinking water.

- Acts as the liaison with the Washington State Department of Health, Department of Ecology, local health departments and districts, and the Environmental Protection Agency (EPA) regarding regulatory compliance.

- Develops and prepares various regulatory reports as required.

Facilities Services, Capital

Facilities Services, Capital:

- Coordinates with and receives approval from the Facilities Services, Operations Cross-connection Control Specialist and Water Distribution Manager on water line maintenance and installation, backflow prevention assembly testing, connection of new equipment, etc.

  Prior to water being used for drinking purposes, Facilities Services, Capital must

obtain satisfactory bacteriological sample results and must have Facilities Services, Operations test backflow prevention assemblies from new construction or repairs in Whitman County. Outside of Whitman County, the contractor must test backflow prevention assemblies and obtain satisfactory bacteriological sample results prior to water being used for drinking purposes.

Facilities Services, Capital or the contractor, as applicable, must provide the bacteriological sample results to EH&S. The contractor must provide the backflow prevention assembly test results for operations outside of Whitman County, and the names, certfications, and telephone numbers of the certified backflow assembly testers (BATs) to Facilities Services, Operations.

Housing and Dining Services

Housing and Dining Services:

- Coordinates with and receives approval from the Facilities Services, Operations Cross-connection Control Specialist and Water Distribution Manager on water line maintenance and installation, backflow prevention assembly testing, connection of new equipment, etc.

- Conducts maintenance on water lines, and if a certified backflow assembly tester (BAT) and equipment is available, maintains backflow preventers for departmental facilities.

  Prior to water being used for drinking purposes, Housing and Dining Services must obtain satisfactory bacteriological sample and backflow prevention assembly testing results from new construction or repairs. Housing and Dining Services or the contractor must provide bacteriological sample and backflow prevention assembly testing results to EH&S. Certified BATs hired or contracted by Housing and Dining Services must provide their names, certifications, and telephone numbers to Facilities Services, Operations.

Regional Campuses and Research Units (RCRU)

The Regional Campuses and Research Units group (RCRU):

- Operates, maintains, and conducts limited monitoring of the drinking water systems located outside Whitman County, and coordinates water conservation efforts.

- Provides a certified Water Distribution Manager who is responsible for the daily operational activities of the following, as required in accordance with WAC 246-292:

  WSU Prosser Irrigated Agriculture Research and Extension Center (IAREC) water system;

  Group B systems at the Roza, Royal Slope, Lind, and Othello Research Units; and

  Associated treatment facilities and distribution systems that directly impact water quality and/or quantity.

  See below for water system definitions.

RCRU Representatives

RCRU representatives are responsible for the following:

- The RCRU Facilities Services, Capital representative coordinates master planning with the Infrastructure Master Planning Committee.

- The RCRU Facilities Services, Operations and Capital representatives, in coordination with Facilities Services, Operations, and Facilities Services, Capital, are responsible for the design and construction of additions and modifications to WSU drinking water systems across the state. RCRU Facilities Services, Operations and Capital representatives, Facilities Services, Operations, and Facilities Services, Capital review plans and specifications for new construction and remodels to ensure compliance with all regulations.

- The RCRU Facilities Services, Operations representative coordinates with and receives approval from the Facilities Services, Operations Cross-connection Control Specialist and Water Distribution Manager on water line maintenance and installation, backflow prevention assembly testing, connection of new equipment, etc.

- The RCRU Facilities Services, Operations and EH&S representatives provide bacteriological and chemical sampling for WSU water systems located outside Whitman County (excluding construction and repair samples) as required by federal and state regulations. The RCRU Facilities Services, Operations and EH&S representatives assist Facilities Services, Operations and managers of other WSU water systems across the state with sampling responsibilities. The department or the contractor which completes construction and/or repairs must perform any required sampling.

  Prior to water being used for drinking purposes, the RCRU Facilities Services, Operations and/or Capital, and/or EH&S representative must obtain satisfactory bacteriological sample and backflow prevention assembly testing results from new construction or repairs. RCRU or the contractor must provide the bacteriological sample results to EH&S and the backflow prevention assembly testing results to Facilities Services, Operations. Certified BATs hired or contracted by RCRU must provide their names, certifications, and telephone numbers to Facilities Services, Operations.

- The RCRU Facilities Services, Operations or the RCRU Facilities Services, Capital representative must provide alternative drinking water sources if construction and/or maintenance requires disruption of water service on a case by case basis.

- The RCRU EH&S representative investigates concerns regarding drinking water quality and performs sanitary surveys of drinking water systems, including wells, reservoirs, distribution systems, and treatment facilities.

- The RCRU EH&S representative acts as the liaison with the Washington State Department of Health, Department of Ecology, and the EPA regarding regulatory compliance.

- The RCRU EH&S representative develops and prepares various regulatory reports as required.

EH&S, WSU Pullman, evaluates current and new regulations to help ensure WSU remains in compliance with state and federal regulations and maintains safe and healthy drinking water.

Water System Users

Any University department, organization, non-University entity, or person that connects equipment, installs piping, or makes changes to University water systems must receive prior approval from Facilities Services, Operations.

For University water systems outside Whitman County, the departments, organization, non-University entities, or person must also contact RCRU for approval prior to connecting equipment, installing piping, or making changes.

Assigned Responsibilities

The Water Board may assign or reassign drinking water responsibilities to water system users (e.g., USDA Palouse Conservation Field Station). Such assignments and/or reassignments must be submitted in writing and maintained on file at EH&S.

PROGRAM ELEMENTS

The following summarizes each program element in this policy. Refer to the Program for more specific information on these program elements.

To view the Program, go to:

http://ehs.wsu.edu/

Select Public Health, then
Select Drinking Water Quality, then
Select Drinking Water Program.

Public Water Systems

WSU facilities receive water from either WSU-owned and operated Group A or Group B water systems or from non-WSU-owned public water systems.

Group A System

A Group A water system is a public water system that serves fifteen or more residential service connections **or** twenty-five or more people per day for 60 or more days per year.

For any new Group A systems that are developed, refer to WAC 246-290-020.

WSU-Owned and -Operated

The Group A water systems owned and operated by WSU are:

- WSU Pullman (Group A community)
- Tula Young Hastings Farm (Group A nontransient noncommunity)
- WSU Prosser—Irrigated Agricultural Research and Extension Center (Group A nontransient noncommunity)

Group B System

A Group B water system is a public water system that serves less than fifteen residential service connections **and** less than twenty-five people per day, or 25 or more people per day for less than sixty days per year.

For any new Group B systems that are developed, refer to WAC 246-291.

WSU-Owned and -Operated

The Group B water systems owned and operated by WSU are:

- Central Ferry Research Farm
- Colockum Multiple Use Research Unit
- Columbia View Orchard Research Unit
- Lind Dry Land Research Unit
- Othello Research Unit
- Palouse Conservation Field Station (operated by USDA)
- Smoot Hill Biological Field Study Area
- Spillman Farm
- Royal Slope Columbia Basin Research Unit #2 (operated by private organization)
- Roza Research Unit

Non-WSU-Owned Public Water Systems

The WSU facilities which receive water from non-WSU-owned public water systems are:

- WSU Spokane
- WSU Tri-Cities
- WSU Vancouver
- Intercollegiate Center for Nursing—Spokane
- Smith Tract--Spokane
- Spokane Intercollegiate Research and Technology Institute (SIRTI)
- WSU Mount Vernon Research and Extension Unit
- WSU Puyallup Research and Extension Unit
- WSU Vancouver Research and Extension Unit
- WSU Wenatchee TFREC

Construction, Cross-connection Controls, and Plan Review

Construction

Facilities Services, Operations, RCRU, and Facilities Services, Capital must submit project reports and construction documents to the Department of Health (DOH) for approval prior to commencing construction on:

- Group A and B water systems (see definitions above),
- Extension of systems, or
- Improvements.

Facilities Services, Operations or Facilities Services, Capital must also provide copies of project reports and construction documents to EH&S.

EXCEPTION: The Washington Department of Health (DOH) does not require project reports and construction documents be submitted for activities listed under WAC 246-290-125.

Refer also to the Plan Review section below.

Facilities Services, Operations, RCRU, and Facilities Services, Capital work with the owners of

non-WSU public water systems when planning construction or projects which may affect those systems.

During construction projects, Facilities Services, Capital notifies EH&S, Facilities Services, Operations, or RCRU for public notification if a water line is contaminated.

Cross-connection Control

The University maintains safe drinking water supplies by eliminating or controlling existing cross-connections between:

- Potable and non-potable water systems,
- Plumbing fixtures, and
- Industrial piping systems (including reclaimed and/or reuse water).

After new construction or repairs, and prior to water being used for drinking purposes, the department overseeing the project must obtain satisfactory backflow prevention assembly testing results, The department must provide these results to Facilities Services, Operations as soon as possible.

Departments and owners responsible for Group A water systems must have a certified cross-connection control specialist inspect and survey the water system facilities on an annual basis or after a backflow incident per WAC 246-290-490(7)(b).

For Group B water systems and WSU facilities on non-WSU public water systems, all responsible departments and owners must have a certified cross-connection control specialist inspect and survey them as determined by the Water Board or after a backflow incident.

The Water Board has established the Cross-connection Control Program in the Program document to comply with WAC 246-290-490, WAC 246-291-270, WAC 51-56-0600, and Uniform Plumbing Code (UPC) regulations.

WSU must adhere to WAC 246-290-490 and WAC 246-291-270 for premises isolation (water supply to buildings), and the UPC and WAC 51-56-0600 for in-premises isolation (internal building water distribution).

Plan Review and Design Standards

Facilities Services, Operations, a certified cross-connection control specialist, EH&S, Housing and Dining Services, RCRU, and Facilities Services, Capital must review all plans and design standards for new or remodeled construction involving water systems.

All plans and work must meet Group A and B water system engineering requirements and design standards, as well as the requirements of the local administrative authority, if applicable.

Plans must be prepared under the direction of a professional engineer licensed in Washington.

Water System Plans

The Pullman campus system is required to submit a revised water system plan every six years to DOH. Facilities Services, Operations is responsible for preparing and submitting this plan.

Small water system plans are required for small Group A water systems. (See definition above

under **Group A System**.) The RCRU, Facilities Services, Operations, Facilities Services, Capital, and EH&S are responsible for developing these plans for their respective systems.

Well Construction, Decommissioning, Maintenance, Source Approval, and Interties

Facilities Services, Operations and RCRU, with assistance from EH&S, are responsible for:

- Obtaining source water approval.
- Interties with other systems.
- Construction and decommissioning of all University wells, including agricultural, municipal, industrial, domestic, or commercial wells.
- Water rights.

  NOTE: The Real Estate Office, Finance and Administration, assists with applications for water rights.

Sampling, Monitoring, Repair, Reporting, and Recordkeeping

Sampling, Monitoring, and Repair

EH&S, Facilities Services, Operations, and RCRU are responsible for all bacteriological and chemical sampling (excluding construction and repair sampling). The Water Distribution Manager provides assistance with daily monitoring.

For repairs and installation of new lines and systems, Facilities Services, Operations, Housing and Dining Services, RCRU, and/or Facilities Services, Capital are responsible for:

- Ensuring chlorination meets the most recent American Water Works Association (AWWA) standards
- Obtaining adequate bacteriological sampling results

After new construction or repairs, and prior to water being used for drinking purposes, the department overseeing the project must obtain satisfactory results of bacteriological samples. The department must provide these results to EH&S as soon as possible.

Reporting, Public Notification, and Recordkeeping

EH&S, RCRU, Facilities Services, Operations, and Facilities Services, Capital are responsible for all regulatory reporting and recordkeeping (excluding cross-connection control), and public notification in cases of water quality violations. The Water Distribution Manager provides assistance with these functions.

Facilities Services, Operations, EH&S, and RCRU are responsible for all cross-connection control recordkeeping, in accordance with applicable records retention requirements. See BPPM 90.01.

Sanitary Surveys, Vulnerability Assessments, and Emergency Response Plans

Sanitary Surveys

A qualified sanitary surveyor is required to perform Group A water system surveys every five

years. EH&S is responsible for coordinating the surveys.

Vulnerability Assessments and Emergency Response Plans

EH&S, Facilities Services, Operations, Housing and Dining Services, RCRU, Facilities Services, Capital, and Public Safety are responsible for vulnerability assessments and emergency response plans for their respective systems and facilities.

Wellhead Protection and Sanitary Control Areas

Facilities Services, Operations, RCRU, Facilities Services, Capital, and EH&S are responsible for maintaining wellhead protection programs and sanitary control areas around wellheads for Group A water systems.

Group B water systems are not required to have wellhead protection programs. However, the University must maintain sanitary control areas (100 foot radius) around the wellheads.

Facilities Services, Operations and RCRU must ensure that their wellhead protection program for Group A systems is incorporated into the these water system plans every six years.

EH&S and RCRU must ensure that the contaminant inventory list required in their wellhead protection program for Group A systems is updated every two years with appropriate notification to regulatory and owner agencies.

Operating Permits and Water Works Operators Certifications

All Group A water systems are required to have operating permits. (WAC 246-294)

In addition, the Pullman campus water system is required to have at least one certified Water Distribution Manager 3 in responsible charge of the daily operational activities of the system. Smaller Group A water systems are required to have at least one certified Water Distribution Specialist. (WAC 246-292)

Water Conservation

Two representatives from WSU serve on the Palouse Basin Aquifer Committee to promote water conservation at University facilities in Whitman County. For all other University water systems and facilities, the RCRU promotes water conservation at those locations.

APPENDIX F-14

Lead and Copper Monitoring Plan

Lead and Copper Sample Plan / Locations
Revised 9-06

30 samples required every 3 years.

Chinook, Columbia and Nez Perce Apts. meet Tier 3 category requirements (multi-family residences constructed prior to 1983 with lead soldered copper pipes installed).

Yakima was constructed in the 1990s and has copper pipes but no lead solder. DOH instructed EH&S to sample these units anyway.

Stimson, EE/ME and Food Services buildings meet Tier 2 category requirements (constructed or remodeled after 1983 with lead soldered copper pipes installed).

Chinook Apts (126 units [31.3 % of total # apt]):	8
Columbia Apts (54 units [13.4 % of total # apt]):	4
Nez Perce Apts (96 units [23.8 % of total # apt]):	6
Yakima Apts (127 units [31.5 % of total # apt]):	9
Stimson	1
EE/ME	1
Food Services	1
Total	30

Lead and Copper Consumer Notice certification form

All Group A water systems that conduct lead and copper monitoring must provide individual sampling results to the persons at each sample location. (CFR 141.85 (d))

Notification of Results: The water system must provide the consumer notice as soon as possible, but no later than 30 days after learning the results.

Community water systems: You must provide individual sampling results to all residences for which you received lead and copper samples. In multi-unit structures, only notify each unit tested.

Nontransient noncommunity water systems (NTNCs): You must notify all consumers who use water from the sample tap, even if they do not receive a water bill. With prior approval from DOH, NTNC water systems can post the notice in public areas.

Certification to the state: DOH must receive a sample copy of one consumer notice and a signed certification form (below) within 90 days after the end of the monitoring period.

To meet this reporting requirement, you may:

- Use the DOH Consumer Notice Template.
- Use the applicable EPA Consumer Notice template.
- Prepare your own Consumer Notice in conjunction with the state.

If you choose to produce your own Consumer Notice, it must include all of the following:

1. The sample results of the tap tested.
2. An explanation of the health effects of lead.
3. Steps consumers can take to reduce exposure to lead in drinking water.
4. The water system's contact information.
5. The maximum contaminant level goal (MCLG) and action level for lead, and the definitions of these two terms.

If you are responsible for multiple water systems, you can send to the Office of Drinking Water:

- A list of the water systems you provided Consumer Notices to, with name and PWS ID number.
- Send one copy of the Consumer Notice you used.
- Send one completed certification form (below).

Lead and Copper Results: Consumer Notification Certification Form

The water system must complete this section. The signature below certifies that the notice contains all required elements.

Complete the following items (check all that apply):

X I emailed all Consumer Notices to the water users at all of the lead and copper sampling locations within 30 days of receiving the lead and copper results from the laboratory.

☐ **(For NTNC systems ONLY)** Notice posted at _____ on ___/___/____ within 30 days of receiving the lead and copper results from the laboratory. (***Only By Department Approval***)

Washington State University 93200Q
Water System PWS ID

Signature of owner or operator	Public Health Manager Position	7-30-15 Date

Send a copy of the completed notice and this certification form to: Washington State Department of Health, Office of Drinking Water, Water Quality Section,PO Box 47822, Olympia WA 98504-7822 or fax to (360) 236-2252.

DOH Form 331-462-F

Yakima M718	0.00166	0.114
Yakima P737	0.00966	0.156
Yakima Q757	0.00411	0.138

* ND means none detected.

The maximum contaminant level goal (MCLG) is the level of a contaminant in drinking water below which there are no known or expected risks to health. MCLGs allow for a margin of safety. The action level is the concentration of a contaminant that, if exceeded, triggers treatment requirements or actions a water system must follow.

- The MCLG for lead is "0" and the action level is 15 ppb (or 0.015 mg/L).
- The MCLG and action level for copper is 1,300 ppb (or 1.3 mg/L).

The water system's compliance with the Lead and Copper Rule (LCR) is calculated by using sample results collected from sites in our sampling pool. Your location's lead or copper results may be higher or lower than the compliance calculation for the overall water system and does not

reflect our water system's compliance with the LCR. We will notify all water users if the lead or copper results from our water system exceed the action level.

For more information, please contact: Gene Patterson .
(owner or operator)

at (509) 335 – 3041 or PO Box 641172 Pullman, WA 99164 – 1172.
(phone number) (address)

This notice is sent to you by WSU Water System on 7/30/15 .

How Lead Gets Into Water

Lead in drinking water most often comes from water distribution lines or household plumbing rather than from the water system source. Plumbing sources can include lead pipes, lead solder, faucets, valves, and other components made of brass. Lead from other sources (such as lead-based paint and contaminated dust or soil) can increase a person's overall exposure, which adds to the effects of lead in water.

Potential Health Effects of Lead

The greatest risk of lead exposure is to infants, young children, and pregnant women. Lead can cause serious health problems if too much enters the body. Lead is stored in the bones and can be released later in life. Lead can cause damage to the brain and kidneys, interfere with production of red blood cells that carry oxygen, and may result in lowered IQ in children. During pregnancy, the child receives lead from the mother's bones, which may affect brain development. Low levels of lead can affect adults with high blood pressure or kidney problems.

How Copper Gets Into Water

Copper is a mineral and natural component in soils. In the correct amounts, it is an essential nutrient for humans and plants. In Washington State, most copper in drinking water comes from corrosion of household plumbing. Plumbing sources can include copper pipe and brass fixtures. Copper from plumbing corrosion can accumulate overnight.

Potential Health Effects of Copper

Although copper is an essential mineral in the diet, too much copper can cause health problems. Copper is widely distributed within the tissues of the body, but accumulates primarily in the liver and kidneys. A single dose of 15 mg of copper can cause nausea, vomiting, diarrhea, and intestinal cramps. Severe cases of copper poisoning have led to anemia and to disruption of liver and kidney functions. Individuals with Wilson's or Menke's diseases are at higher risk from copper exposure.

How you can reduce exposure:

- When your water has been sitting for several hours, flush the pipe by running the cold-water tap until the water is noticeably colder before using the water for drinking or cooking. **(The longer water has been sitting in the pipes, the more dissolved metals it may contain).**

- Use only cold water for drinking, cooking, and making baby formula. Hot water may contain higher levels of lead or copper.
- Frequently clean the filter screens and aerators in faucets to remove captured particles.
- If building or remodeling, only use "lead free" or low lead piping and materials. Avoid using copper piping or brass fixtures for locations where water will be consumed or used in food preparation (such as kitchen or bathroom sinks).

How Lead Gets Into Water

Lead in drinking water most often comes from water distribution lines or household plumbing rather than from the water system source. Plumbing sources can include lead pipes, lead solder, faucets, valves, and other components made of brass. Lead from other sources (such as lead-based paint and contaminated dust or soil) can increase a person's overall exposure, which adds to the effects of lead in water.

Potential Health Effects of Lead

The greatest risk of lead exposure is to infants, young children, and pregnant women. Lead can cause serious health problems if too much enters the body. Lead is stored in the bones and can be released later in life. Lead can cause damage to the brain and kidneys, interfere with production of red blood cells that carry oxygen, and may result in lowered IQ in children. During pregnancy, the child receives lead from the mother's bones, which may affect brain development. Low levels of lead can affect adults with high blood pressure or kidney problems.

How Copper Gets Into Water

Copper is a mineral and natural component in soils. In the correct amounts, it is an essential nutrient for humans and plants. In Washington State, most copper in drinking water comes from corrosion of household plumbing. Plumbing sources can include copper pipe and brass fixtures. Copper from plumbing corrosion can accumulate overnight.

Potential Health Effects of Copper

Although copper is an essential mineral in the diet, too much copper can cause health problems. Copper is widely distributed within the tissues of the body, but accumulates primarily in the liver and kidneys. A single dose of 15 mg of copper can cause nausea, vomiting, diarrhea, and intestinal cramps. Severe cases of copper poisoning have led to anemia and to disruption of liver and kidney functions. Individuals with Wilson's or Menke's diseases are at higher risk from copper exposure.

How you can reduce exposure:

- When your water has been sitting for several hours, flush the pipe by running the cold-water tap until the water is noticeably colder before using the water for drinking or cooking. **(The longer water has been sitting in the pipes, the more dissolved metals it may contain).**
- Use only cold water for drinking, cooking, and making baby formula. Hot water may contain higher levels of lead or copper.
- Frequently clean the filter screens and aerators in faucets to remove captured particles.
- If building or remodeling, only use "lead free" or low lead piping and materials. Avoid using copper piping or brass fixtures for locations where water will be consumed or used in food preparation (such as kitchen or bathroom sinks).

Drinking Water Lead and Copper Sampling Procedures

Lead and copper samples are being collected to determine the levels in WSU drinking water. The U.S. Environmental Protection Agency and WA State Department of Health (DOH) under the Lead and Copper Rule require this sampling effort.

The sample collection procedure are as follows:

1. Collect samples between May and August per the DOH Water Quality Monitoring Schedule.

2. Collect samples from a kitchen or bathroom faucet that does not have any faucets adjacent or close by the faucet preferably.

3. Avoid using single handle faucets if possible so that hot water bleed over does not need to be checked. If a single handle facet must be used, turn off the cold water valve under the sink, and turn on the cold water. If water comes out of the faucet then hot water is bleeding over into the cold water. Valve off the hot water and turn back on the cold water valve prior to flushing / sampling the faucet. Contact Housing of Facilities Services maintenance so that the faucet can be repaired/replaced.

4. If there is a water softener or point of use filter on the kitchen faucet, collect the sample from the bathroom faucet that is not attached to a water softener.

5. Do not remove the aerator prior to sampling.

6. Flush the cold water from the faucet for at least 5 minutes, then turn off. Post a sign over the sink stating do not use the sink today and to contact EHS with questions.

7. At least 6 hours after flushing the faucet, collect the sample. Samples must be collected between 6 and 12 hours after flushing. After labeling the sample bottle, place the open sample bottle below the faucet and then open the cold water faucet slowly. Fill the 1 liter sample bottle to the “shoulders” of the bottle, then turn off water. The 1st liter of water must be collected. If water is spilled or bypasses the bottle, the sample is invalid.

8. Tightly cap the sample bottle and place in a cooler with ice.

9. If any plumbing repairs or replacement has been done at the location since the previous sampling event, note this information on the label as provided.

10. The samples must be stored under refrigeration. The holding time for the samples is 6 months. Drop the samples off at Anatek for analysis.

Lead and Copper Consumer Notice certification form

All Group A water systems that conduct lead and copper monitoring must provide individual sampling results to the persons at each sample location. (CFR 141.85 (d))

Notification of Results: The water system must provide the consumer notice as soon as possible, but no later than 30 days after learning the results.

Community water systems: You must provide individual sampling results to all residences for which you received lead and copper samples. In multi-unit structures, only notify each unit tested.

Nontransient noncommunity water systems (NTNCs): You must notify all consumers who use water from the sample tap, even if they do not receive a water bill. With prior approval from DOH, NTNC water systems can post the notice in public areas.

Certification to the state: DOH must receive a sample copy of one consumer notice and a signed certification form (below) within 90 days after the end of the monitoring period.

To meet this reporting requirement, you may:

- Use the DOH Consumer Notice Template.
- Use the applicable EPA Consumer Notice template.
- Prepare your own Consumer Notice in conjunction with the state.

If you choose to produce your own Consumer Notice, it must include all of the following:

1. The sample results of the tap tested.
2. An explanation of the health effects of lead.
3. Steps consumers can take to reduce exposure to lead in drinking water.
4. The water system's contact information.
5. The maximum contaminant level goal (MCLG) and action level for lead, and the definitions of these two terms.

If you are responsible for multiple water systems, you can send to the Office of Drinking Water:

- A list of the water systems you provided Consumer Notices to, with name and PWS ID number.
- Send one copy of the Consumer Notice you used.
- Send one completed certification form (below).

Lead and Copper Results: Consumer Notification Certification Form

The water system must complete this section. The signature below certifies that the notice contains all required elements.

Complete the following items (check all that apply):

X I emailed all Consumer Notices to the water users at all of the lead and copper sampling locations within 30 days of receiving the lead and copper results from the laboratory.

☐ **(For NTNC systems ONLY)** Notice posted at _____ on ___ / ___ / ____ within 30 days of receiving the lead and copper results from the laboratory. (***Only By Department Approval***)

Washington State University	93200Q

How Lead Gets Into Water

Lead in drinking water most often comes from water distribution lines or household plumbing rather than from the water system source. Plumbing sources can include lead pipes, lead solder, faucets, valves, and other components made of brass. Lead from other sources (such as lead-based paint and contaminated dust or soil) can increase a person's overall exposure, which adds to the effects of lead in water.

Potential Health Effects of Lead

The greatest risk of lead exposure is to infants, young children, and pregnant women. Lead can cause serious health problems if too much enters the body. Lead is stored in the bones and can be released later in life. Lead can cause damage to the brain and kidneys, interfere with production of red blood cells that carry oxygen, and may result in lowered IQ in children. During pregnancy, the child receives lead from the mother's bones, which may affect brain development. Low levels of lead can affect adults with high blood pressure or kidney problems.

How Copper Gets Into Water

Copper is a mineral and natural component in soils. In the correct amounts, it is an essential nutrient for humans and plants. In Washington State, most copper in drinking water comes from corrosion of household plumbing. Plumbing sources can include copper pipe and brass fixtures. Copper from plumbing corrosion can accumulate overnight.

Potential Health Effects of Copper

Although copper is an essential mineral in the diet, too much copper can cause health problems. Copper is widely distributed within the tissues of the body, but accumulates primarily in the liver and kidneys. A single dose of 15 mg of copper can cause nausea, vomiting, diarrhea, and intestinal cramps. Severe cases of copper poisoning have led to anemia and to disruption of liver and kidney functions. Individuals with Wilson's or Menke's diseases are at higher risk from copper exposure.

How you can reduce exposure:

- When your water has been sitting for several hours, flush the pipe by running the cold-water tap until the water is noticeably colder before using the water for drinking or cooking. **(The longer water has been sitting in the pipes, the more dissolved metals it may contain).**
- Use only cold water for drinking, cooking, and making baby formula. Hot water may contain higher levels of lead or copper.
- Frequently clean the filter screens and aerators in faucets to remove captured particles.
- If building or remodeling, only use "lead free" or low lead piping and materials. Avoid using copper piping or brass fixtures for locations where water will be consumed or used in food preparation (such as kitchen or bathroom sinks).

Although copper is an essential mineral in the diet, too much copper can cause health problems. Copper is widely distributed within the tissues of the body, but accumulates primarily in the liver and kidneys. A single dose of 15 mg of copper can cause nausea, vomiting, diarrhea, and intestinal cramps. Severe cases of copper poisoning have led to anemia and to disruption of liver and kidney functions. Individuals with Wilson's or Menke's diseases are at higher risk from copper exposure.

How you can reduce exposure:

- When your water has been sitting for several hours, flush the pipe by running the cold-water tap until the water is noticeably colder before using the water for drinking or cooking. **(The longer water has been sitting in the pipes, the more dissolved metals it may contain).**
- Use only cold water for drinking, cooking, and making baby formula. Hot water may contain higher levels of lead or copper.
- Frequently clean the filter screens and aerators in faucets to remove captured particles.
- If building or remodeling, only use "lead free" or low lead piping and materials. Avoid using copper piping or brass fixtures for locations where water will be consumed or used in food preparation (such as kitchen or bathroom sinks).

APPENDIX G

Chapter 7

APPENDIX G-1

WSU Construction Standard Specifications

DIVISION 21 – FIRE SUPPRESSION
21 10 00 WATER-BASED FIRE SUPPRESSION SYSTEMS

PART 1 - GENERAL

1.01 SCOPE

A. The following standards and procedures apply to the design and installation of all wet pipe and dry pipe sprinkler systems. The design of fire suppression systems shall follow these guidelines, but the designer shall consult with WSU Engineering Services prior to beginning design work. The design of the Fire Sprinkler System shall be performed by a Fire Protection Engineer licensed in the State of Washington.

1.02 DESIGN ASPECTS FOR ALL BUILDINGS

A. All Fire Suppression System design and installation shall comply with the most current and adopted version of NFPA 13.

B. Contract Drawings for every new project and renovation shall include a complete riser diagram and shall show riser locations, main header location with details, and Fire Department Connection (FDC) location. Each floor of a multi-story building shall be shown on the riser diagram.

C. In multi-level buildings, floor control valve and drain shall be accessible from the floor level. A drain assembly shall be provided for every floor except penthouses less than 1000 square feet.

D. A Post Indicator Valve (PIV) shall be included in every new sprinklered building. The PIV should be located at least 20 feet from the building and shall be shown on the Contract Drawings and shall be at a minimum a 6 inch valve. All PIV locations must be reviewed and approved by the WSU Fire Marshall. All piping between the PIV and the building, including an approved back flow prevention assembly, shall be shown on the Contract Drawings.

1. Every new sprinkler system is to have a back flow prevention assembly.

2. Existing buildings which are being remodeled or renovated, with existing sprinkler systems not already having a PIV or back flow prevention assembly, shall have these items added to the system.

1.03 DESIGN FOR NEW BUILDINGS

A. The Consultant shall recommend a list of hazard classifications for the proposed facility, to be reviewed and approved by the Authority Having Jurisdiction (AHJ).

B. Designs shall be based primarily on Standard Response sprinklers. Specify Quick Response sprinklers only where required by code or where clearly advantageous based on the program.

PART 2 - PRODUCTS AND MATERIALS

2.01 GENERAL

A. Materials and Equipment: Where two or more pieces of equipment are required to perform interrelated functions, they shall be products of one manufacturer.

B. Approval Guides: Unless otherwise indicated, all products shall be listed in the latest publication of Approval Guides for Underwriters Laboratory for the service intended.

C. Acceptable Manufacturers of sprinkler specialties shall be one of the following (or equivalent):

1. Central

2. Grinnell

3. Reliable

4. Viking

2.02 PIPE

A. Schedule of Pipe: All pipe shall be ferrous, meet the requirements of the most current and adopted version of NFPA 13, Table 3-1.1.1 and be schedule 40 for pipe up to 2 inches. Schedule 10 may be used for pipe 2 1/2 inches and larger.

B. Piping, Buried: C900 PVC "Blue Brute" or ductile iron. See specific requirements in section 22 11 00 “Facility Water Distribution.”

C. Piping, Building Interior: Galvanized pipe and fittings shall be used between the building entrance and the fire sprinkler back flow prevention assembly.

D. Dry pipe systems, non-pressurized fire department pumper connection piping, and pipe located in corrosive environments shall meet the requirements of the most current and adopted version of NFPA 13, Table 3-1.1.1, be schedule 40 pipe, ferrous, and galvanized. No exceptions.

E. Rust Inhibitive Paint: All exposed threads on galvanized pipe are to be coated with rust inhibitive paint.

F. Pipe Identification and Labeling: Designer shall specify: “Pipe identification shall be in accordance with the most current standards of the National Fire Protection Agency (NFPA).”

2.03 FITTINGS AND COUPLINGS

A. Rust Inhibitive Paint: Grooved Fittings and couplings shall be coated with a rust inhibiting paint.

B. Threaded Fittings: Threaded fittings shall be cast iron or malleable, class 125 NPT, rated for 175 psi cold water working pressure, and shall conform to the most current and adopted versions of ANSI B16.4, ASTM 126 and ANSI B2.1.

C. Nipples: No close nipples will be permitted. For short pipe connections use standard short nipples.

D. Adjustable Nipples: Adjustable drop nipples may be used on flush or concealed type sprinklers only and must be of double o-ring seal design.

E. Thread-O-Lets: Shop welded Thread-O-Lets may be used where a certified welder is used, meeting the requirements of NFPA 13. Field-welded Thread-O-Lets shall not be accepted.

F. Grooved Fittings: 90 degree bends, 45 degree bends, tees, and reducers shall be malleable iron or ductile. The fittings shall be:

1. Gustin-Bacon
2. Gruvlok
3. Victaulic
4. Viega

G. Adapter Flanges: Adapter flanges (fittings) shall be cast iron/class 125 conforming to the most current and adopted version of ANSI B-16.1, with a rust inhibiting coating. The adapter flanges shall be:

1. Gustin-Bacon
2. Gruvlok
3. Victaulic
4. Viega

H. Grooved Couplings:

1. Grooved couplings and reducers shall be malleable or ductile iron conforming to the most current and adopted versions of ASTM A-47.

2. Coupling gasket shall be molded Elastomer (EPDM) per the most current and adopted version of ASTM D2000, Victaulic grade "E" (type A).

3. On dry pipe systems a "FlushSeal" or "Flush Gap" gasket shall be used.

4. Grooved couplings and reducers shall be of the same manufacturer as used for the grooved fittings.

I. Plain End Couplings: Plain end couplings (Roust-A-Bouts, Plainloks or similar couplings) may be used for modification of existing sprinkler systems, pending review by the WSU Fire Marshall. Plain end couplings shall not be acceptable for new sprinkler systems.

J. Hole Cut Outlets, New Systems: No hole cut outlets may be used on new sprinkler systems.

K. Hole Cut Outlets, Existing Systems: Hole cut bolted branch outlets couplings shall be used on existing sprinkler systems only in isolated locations as approved by the Owner. Hole cut outlets shall be a full bodied outlet.

1. Style 920 by Victaulic by Gruvlok

2. Gustin-Bacon

2.04 HANGERS AND SUPPORTS

A. Hangers: Provide hangers to support all piping in perfect alignment without sagging or interference, and permit free expansion and contraction.

B. Pipe Rings: Pipe rings to be zinc coated Grinnell figure 69 or approved equal.

C. Hanger Rods: Hanger rods to be electro-galvanized.

D. C-Clamps: All c-clamps (beam clamps) shall be equipped with earthquake retaining straps.

E. Riser Clamps: Riser clamps shall not protrude more than 2 inches beyond the edge of the hole. The riser clamps shall be UL listed, Grinnell Figure 261 or approved equal.

F. Concrete Anchors: Concrete expansion anchors shall be:

1. Hilti

2. Phillips

3. Rawl

4. ITW

G. Explosive Anchors: Explosive driven type fasteners are not permitted.

2.05 EARTHQUAKE BRACING

A. Earthquake bracing shall be with a pipe clamp and pipe with a swivel type anchor or similar to those illustrated in the most current and adopted version of NFPA 13.

2.06 VALVES

A. Outside Screw and Yoke (OSY) Valves: OSY valves shall be cast iron, flanged and rated for 175 psi, non-shock cold water working pressure.

B. Isolation/Control Valves: Sprinkler system, standpipe, and other above ground controlling valves shall be gear-operated slow-close butterfly valves with flag type indicator, cast iron lug body, bronze disc, EPDM crowned seat, stainless steel stem with bronze bushings, two internal single-pole, double-throw monitor switches, and locking chain supplied by the valve company.

1. Grinnell Series 8000FP or approved equal.

C. Supervised Valves 1 1/2 Inches and Smaller: Sprinkler controlling valves 1 1/2 inches and smaller shall be slow-close supervised butterfly valve:

1. Milwaukee Valve Company, model BB-SC.

D. Valves Controlling Sprinklers in Elevator Machine Room and Top of Elevator Shaft:

1. Sprinklers located in elevator machine rooms and at the top of the elevator shaft shall be controlled by a supervised butterfly control valve with normally closed contacts:

i. Milwaukee Valve Co., model BB-S02-R.

ii. Designer shall consult with WSU Environmental Health and Safety (EHS) if it is a high-rise building or high-rise building requirements are being applied to this project.

E. Drain Valves: Drain valves shall be UL Listed, screw-in bonnet bronze globe valves, rated to 175 psi non-shock cold water working pressure. Low point drain valves shall have a ¾ inch brass nipple with ¾ inch male hose threads and cap.

1. Nibco

2. United

F. Check Valves:

1. Grooved, iron body, bronze seat, stainless steel clapper with a replaceable rubber seal (a rubber seal integral with the seat is not acceptable), and 175 psi non-shock cold water working pressure.

2. Viking model D, Central model 90 or approved equal.

G. Provide a double check valve assembly including the two OSY gate valves. The assembly shall be an approved double check valve assembly conforming to the standards of the most current Washington State Department of Health Cross-Connection Control Program.

1. Febco

2. Watts

2.07 SPRINKLERS

A. Sprinklers: Provide ordinary temperature rated sprinklers with a ½ orifice. Areas subject to high temperatures exceeding 110 degrees Fahrenheit or as noted in the most current and adopted version of NFPA 13 shall have sprinklers rated for 212 degrees Fahrenheit or as required.

1. "I" occupancy in the required Quick Response sprinklers:

i. Reliable Model F1-FR

ii. Viking Model M.

iii. Flow control and extended coverage sprinklers shall only be specified after consultation and approval of the WSU Life Safety Department and EH&S.

2. Designer shall describe each sprinkler to be used for all areas of the project, including style (upright, pendent, sidewall, semi-recessed etc.); type (fusible link, solder, or frangible bulb); finish (white, brass, chrome, decorator color, etc.); and type and finish of any canopies or escutcheons when applicable. List at least three different manufacturers and model numbers for each type of sprinkler.

3. Recessed Sprinklers: Provide recessed sprinklers in all finished lay-in or plaster ceilings. Provide chrome sprinklers with a white escutcheon.

i. Reliable model F1 Recessed

ii. Viking Micromatic Model M with escutcheon model E-1

iii. Gem model F985

iv. Omega Sprinkler heads shall not be acceptable.

4. Recessed sprinklers may only be used in accordance with their listing or approval. They cannot be used in storage occupancies or occupancies involving special hazards such as flammable liquids.

B. Spare Sprinklers: Provide spare sprinklers and escutcheons for each type and style of sprinkler used in accordance with the most current and adopted version of NFPA 13 and proportioned based upon the number of each type and style of sprinkler used on the job. In no case should fewer than six of each type of sprinkler heads be provided. Spares of dry-pendent sprinklers are not required.

2.08 SPARE SPRINKLER CABINETS

A. Provide a spare sprinkler cabinet (or cabinets) to accommodate the required number of spare sprinklers and escutcheons. Include a wrench for each type of sprinkler in the cabinet.

2.09 SPRINKLER HEADGUARD

A. Provide UL Listed sprinkler headguards for sprinkler heads subject to mechanical damage or for any sprinkler of which any portion is at, or lower than, 7 feet above the floor.

2.10 FIRE DEPARTMENT CONNECTION

A. A properly labeled sign indicating "Auto Sprinkler" or "Auto Sprinkler / Standpipe" shall be provided as a part of the escutcheon or as a separate sign permanently affixed to the building, in accordance with NFPA 13. Lettering for the sign shall be a minimum one inch high. Choose either chrome or polished brass for the FDC and escutcheon.

B. Provide a fire department connection (FDC) with horizontal type connections, dual clapper, 2-1/2 inch inlets, with rocker lug caps, and chains.

2.11 BALL DRIP

A. Where feasible, provide a bronze ball drip for the fire department connection inside of the building and pipe to the nearest floor drain.

B. At locations where an interior ball drip is not feasible, provide an accessible manhole for servicing and maintaining the ball drip.

C. Ball drip location and details shall be reviewed and approved by WSU Engineering Services.

2.12 ROOF FIRE DEPARTMENT CONNECTION

A. Designer shall consult with WSU Engineering Services and EH&S on the requirements for a roof FDC.

B. Provide a wall-type indicator post and butterfly valve for the roof indicator post, with a two-way roof fire department connection with rocker lug caps and chains:

1. Potter-Roemer 5870 series

2.13 POST INDICATOR VALVE

A. Provide a post indicator valve (PIV) on the fire service water main into the building.

B. Post Indicator valves shall be Kennedy #641 or equal.

2.14 HOSE VALVE

A. Provide 2-1/2 inch polished brass hose valves with a cap and chain. Potter-Roemer model 4065 with model 4626 (cap and chain) or approved equal.

2.15 SIGHT DRAIN

A. Provide a single piece sight drain that conforms with the standards of NFPA 13.

2.16 PRESSURE GAUGE

A. Provide a 3-1/2 inch diameter, bourdon type pressure gauge, 0-300 pounds, 1/4 inch soft metal seat globe valve with arrangements for draining pipe between gage and valve, located near each main or floor control valve assembly on the main line or near each test location.

2.17 DRUM DRIP

A. Provide a cast iron drum drip at the low drain points on a dry system.

2.18 LINK SEALS

A. Provide link seals when underground pipe passes through an exterior wall or slab on grade. Flexible couplings or push-on joints located within 1 foot of each side of the wall must be included in the link seal installation (most current and adopted version of NFPA 13 4-5.4.3.4 exception No. 3).

2.19 WALL ESCUTCHEON

A. Provide plastic split ring type escutcheons and paint to match the wall. Escutcheons are only required with exposed pipe installations.

2.20 DRY PIPE ALARM VALVE

A. For dry systems only, provide a dry pipe alarm valve, trim package, accelerator and air maintenance device. All components shall be products of the same manufacturer. Preferred manufacturer: Viking model F-1.

2.21 AIR COMPRESSOR:

A. For dry systems, provide a tank-mounted air compressor sized to completely refill the system within 30 minutes. Minimum tank pressure shall be 60 psi.

1. Preferred manufacturer: Quincy. Alternatives require approval from WSU Engineering Services.

2.22 FIRE ALARM RELATED EQUIPMENT

A. Equipment in this section shall be provided, installed, and adjusted by the Sprinkler Contractor. Coordinate installation of fire sprinkler system with all other trades. Conduit, wiring, and terminations shall be by others.

B. Waterflow Switch: Potter VSR-F. No exceptions.

C. Valve Supervisor Switch: Potter OSYSU-A2 for OSY valves and Potter PIVSU-A for PIV valves. No exceptions. Butterfly isolation valves shall be equipped with two internal single-pole, double-throw monitoring switches.

D. Pressure Type Waterflow Switch, for dry systems only:

1. Potter PS10-2. No exceptions.

E. High-Low Air Pressure Monitoring Switch, for dry systems only:

1. Potter PS40-2. No exceptions.

F. Supervised Valves 1-1/2 Inches and Smaller: Slow-Close Supervised Butterfly valve from Milwaukee Valve Company, Model BB-SC. No exceptions.

2.23 SIGNS AND PLACARDS

A. Provide stamped metal hydraulic placards, labeled in accordance with the requirements of NFPA 13.

B. At the conclusion of the project, provide blank metal signs for all control, drain and test valves to the WSU Construction Manager. WSU Life Safety shall fill out these signs in accordance with the Fire Alarm Control Panel schedule.

2.24 PIPE THREAD SEALANT

A. Provide a brush-on pipe thread sealant with Teflon, Grinnell Tuff-Loc or approved equal.

PART 3 - EXECUTION

3.01 SHUTDOWN OF EXISTING SYSTEMS

A. Any shutdowns of existing water distribution systems, fire sprinkler systems, domestic water systems or fire alarm systems shall be approved by the WSU Construction Manager. Provide advance written notice at least 7 days prior to the shutdown.

3.02 CONNECTIONS

A. Fire mains and lead-ins shall be flushed thoroughly before connection is made to system piping, in accordance with NFPA 13.

3.03 PENETRATIONS

A. Required Clearance around Pipe:

1. Piping passing through fire rated assemblies, including fire rated gypsum wall board (GWB) assemblies shall be provided with clearance around the entire circumference of the pipe, as required by the most current and adopted version of NFPA 13.

2. Penetrations of walls, floors, or ceilings shall be made in a neat manner using properly sized hole saw or masonry/concrete coring as necessary.

B. Fire Rated Assemblies:

1. The annular space between the wall or pipe sleeve and the sprinkler pipe in fire rated assemblies shall be filled with UL classified firestopping

material in accordance with the manufacturer's recommendation and section 07 84 00.

C. Escutcheons: Split wall plates or escutcheons shall be installed where exposed piping or hangers pass through a finished floor, wall or ceiling and shall fit snugly, securely and cover the opening.

3.04 CONTROL VALVES

A. Install all control valves, supply valves and test valves in readily accessible locations, with the valve handle or wheel no higher than seven feet above the finished floor.

B. Design Consultant shall submit Floor Control Valve Assembly standard details no later than 50% Construction Drawings.

3.05 INSPECTOR'S TEST AND DRAINS

A. Provide inspector’s test valves for each floor of each system. The inspector's test assembly shall be piped to discharge to the WSU Sanitary Sewer system. Discharge shall be into a drain riser located adjacent to the system riser or to a drain for a remote inspectors test valve when provided (i.e., dry systems). The valve shall be readily accessible, at a location no higher than seven feet above finished floor.

B. Main Drains:

1. Designer shall coordinate with the plumbing drawings to indicate the appropriately sized floor drain where required.

2. Provide main drains at all system and floor control valves. Discharge into the WSU sanitary sewer system via floor drain with funnel. No sprinkler system drain line shall be piped directly into a drain; there shall be at least a ½ inch air gap between the pipe and the funnel/drain.

C. Auxiliary Drains: Provide auxiliary drains at all low points of the system, where the trapped section of pipe exceeds five gallons. As a minimum, the drain shall consist of a valve, a ¾ inch brass nipple with ¾ inch male hose threads, and cap. Locate auxiliary drains in unfinished areas without suspended ceiling wherever possible. In finished areas, with lathe and plaster or GWB locate the hose bib within six inches of an access panel, minimum 12" x 12". If located in bathrooms the panel is to be stainless steel.

3.06 GAUGES

A. Provide gauges at the main system riser and each floor control valve. Tap gauges from the main piping, not from the drain piping.

3.07 LAY-IN CEILINGS

A. Designer shall modify as required. For lay-in suspended acoustic ceilings, sprinklers shall be centered on the tiles (in both directions) and carefully aligned.

3.08 EARTHQUAKE BRACING

A. Install earthquake bracing in accordance with the most current and adopted version of NFPA 13.

3.09 INSPECTION, PUNCH LIST AND HYDROSTATIC TESTS

A. Partial System Test or Inspection:

1. Perform tests with the sprinklers installed in their final positions.

2. Where it is critical to the continuance of the project as a whole to cover portions of the piping with ceilings or walls prior to the completion of the entire system, partial testing of the system may be performed after receiving written approval from the WSU Project Manager. In this case, "partial" indicates an entire zone or floor of one system. A satisfactory partial test does not relieve the Contractor from performing all final testing procedures.

B. Preliminary Hydrostatic Test:

1. Perform a hydrostatic test, conforming to the requirements of the current and adopted version of NFPA 13, after the system has been fully installed and is ready for service, and prior to installation of suspended ceilings.

2. Take special precautions to detect and stop water leakage so that any water damage will be minimal.

C. Test of Fire Alarm Equipment:

1. Test the operation of the water flow, pressure, and supervisory switches.

2. When the Contractor has confirmed that the system is in complete operating condition in every respect, notify the Construction Coordinator in writing that the system has been inspected and tested the system and that it is ready for final inspection.

D. Final Hydrostatic Test and Inspection:

1. Final inspection of all phases of the Work shall be made by the Architect and Engineer, Fire Marshal, WSU Life Safety Department and the WSU Construction Manager.

2. Notify the WSU Construction Manager at least 14 days in advance of making the required tests, so that arrangements may be made for the presence of the Architect and Engineer, Fire Marshal, and WSU Life Safety representative to witness the tests.

3. The installing foreman or other representative of Contractor shall be present at this time to conduct any operating tests of alarm, drains or other system functions requested by the Architect and Engineer, Fire Marshall, or WSU Construction Manager.

4. Test the complete system for not less than 2 hours at a pressure of 200 psi (or 50 psi above static pressure, whichever is greater) without the addition of any water. Any leaks or drips shall be repaired immediately by the Contractor.

END OF SECTION

DIVISION 22 – DOMESTIC WATER PIPING
22 11 00 FACILITY WATER DISTRIBUTION

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

A. Washington State University (Pullman campus) is served by both high elevation and low elevation water systems. The high elevation source is the North Fairway Reservoir. The low elevation sources are the Observatory Hill Reservoirs.

B. Refer to WSU utility record drawings for known existing conditions.

1.02 SPECIFIC DESIGN REQUIREMENTS

A. Design of the WSU public drinking water system shall meet the requirements of the most current editions of Chapters 246-290 WAC and the most current edition of the Washington State Department of Health (DOH) Water System Design Manual.

B. Service mains shall be sized to meet the larger demands of either the maximum hourly domestic or the combination of maximum day domestic plus fire flow. In all cases, the minimum service main size shall be 12 inches in diameter.

C. Yearly average domestic demands shall be the product of a 60 gallon per capita day usage and projected population densities. Maximum day rates shall be taken at 150 percent of this yearly average and the maximum hourly rate shall be set at 250 percent. System losses and unaccounted for usages shall be taken at 10 percent of the domestic demand.

D. For design purposes, line velocities shall not average more than 5 feet per second. Exceeding this velocity requires approval from WSU Engineering Services.

E. Mains shall be buried 60 inches below finished grade (to the top of the pipe).

F. Gate valves eight (8) inches and larger shall be installed in a standard vault.

G. Minimum size service branch lines from main shall be 6 inches to inside curb line; reductions may be made at that location if approved by WSU Engineering Services.

H. No saddle taps allowed for service connections. Branch lines tees will be used.

I. Reclaim water pipe shall be color-coded purple.

J. Pipe bedding shall be installed per Washington State University (WSU) Standard Drawing C552.

PART 2 - PRODUCTS

2.01 GENERAL

A. Distribution main shall be one of the following (or approved equal):

1. C900 PVC "Blue Brute"
2. For sleeves, use ductile iron.

B. Fittings shall be class 350 ductile iron per the most current and adopted version of AWWA A21.53.

C. Jointing shall be mechanical.

1. Preferred manufacturer: MegaLug

D. Valves:

1. Shall be flanged, iron body, bronze mounted double disc gate; over eight (8) inches, valves to have non-rising stems. Maximum operating pressure shall be not less than 175 psi for valves up to twelve (12) inches.
2. Shall be installed vertically in level lines and shall meet most current and adopted version of AWWA C500 specifications. Flanges shall be faced and drilled, ASA Class 235, for use with full face gaskets.

E. Shells, lugs, bolts, washers, and nuts shall be type 304 stainless steel.

F. Flanges shall be type 304 stainless steel or ductile iron, most current and adopted version of American Society for Testing and Materials (ASTM) ASTM 536-80, test rated at 200 psi, "Roman" Models SST or equal.

PART 3 - EXECUTION

3.01 GENERAL

A. Install thrust blocks in accordance with the design standards of the most current Water Agencies' Standards Design Guidelines for Water and Sewer Facilities and the manufacturer's recommendations.

B. Provide a Link-Seal assembly at the building penetration.

3.02 DISINFECTION

A. New or repaired public drinking water systems shall be disinfected prior to connection, in accordance with the standards of the most current Uniform

Plumbing Code as modified by Chapter 51-56 WAC, and in accordance with the most current version of ANSI/AWWA C651, “Disinfecting Water Mains.”

B. For installation of new lines and systems, the Contractor is responsible to ensure all chlorination is performed according to the most current version of ANSI/AWWA C651, and that adequate bacteriological sampling results are obtained from a WA State approved laboratory. Submit written documentation of chlorination and bacteriological sampling to the WSU Construction Manager, for review and approval by Environmental Health and Safety (EH&S) and the Water Distribution Manager, prior to placing new lines in service.

3.03 TESTING

A. Conduct pressure testing in accordance with the manufacturer’s recommendations. Contractor shall submit proposed pipe testing procedures to the WSU Construction Manager for review and approval by WSU Engineering Services.

B. No testing water or chlorinated water may be discharged into the sanitary or storm sewer system in accordance with the most current and adopted version of Washington Administrative Code (WAC) 173-201A. All chlorinated water shall either be treated to remove chlorine prior to discharge into sewers, or discharged into an area which does not impact storm drains or surface waters. If soil is the only contaminant, the wastewater may be discharged into the storm sewer catch basins provided they are protected using Best Management Practices (BMPs), per the requirements of WSU section 33 40 00 (Storm Drainage Utilities).

C. The Contractor shall notify the WSU Construction Manager in writing at least 48 hours prior to testing. The Contractor shall make all necessary testing and sampling arrangements, making all necessary arrangements with the WA State approved testing laboratory. The Construction Manager shall notify the following as to date and time of flushing and hydrostatic and bacteriological testing:

1. Facilities Services Water Distribution Manager
2. WSU Environmental Health and Safety
3. WSU Fire Department

END OF SECTION

DIVISION 31 – EARTHWORK
31 00 00 EARTHWORK

PART 1 - GENERAL

1.01 DESIGN CONSIDERATIONS (GEOTECHNICAL)

A. The Washington State University campus at Pullman, Washington is located near the eastern edge of the Columbia Plateau Geologic Province. The geologic substructure is characterized by a thick zone of basalt, of the Columbia River Group, which is as much as 5,000 to 10,000 feet thick in this area and consists of separate flows and occasional interlayers of sedimentary materials. Blanketing the basalt is a material commonly referred to as the "Palouse Loess". This soil consists of wind deposited clay and silt particles and usually classifies as CL or ML in the Unified Soil Classification System. It has a relatively low dry unit weight, is highly sensitive to moisture content changes and some phases are considered collapsible. The thickness of the Palouse Loess stratum varies throughout the campus from only several feet to 100 feet or more.

1. Native soils may only be used as structural fill upon the recommendation of the Geotechnical and Structural Engineers of Record, and with the specific approval of WSU Engineering Services and the WSU Project Manager.

B. For all new structures the Prime Consultant shall provide a Geotechnical Report, prior to Design Development, describing the condition of the native soils and any special considerations necessary during excavation and backfill operations.

C. If the excavation involves a surface area greater than 5,000 square feet, contact WSU Environmental Health and Safety (EH&S) for inspection and review of stormwater protection requirements.

1.02 EXCAVATION NOTIFICATION AND UTILITY LOCATIONS

A. At a minimum, Contractors shall at all times comply with the Excavation and Utility standards of RCW 19.122.

B. Pre-Design Surveys

1. Design Consultants shall note that the One-Number Locator Service is primarily intended for pre-excavation, not-predesign. WSU Utilities personnel can assist with utility locates to confirm essential pre-design survey work (see requirements below).

2. Consultants requiring locations of as-built campus utilities shall request access to Record Drawing archives and WSU Graphic Information Systems (GIS) through the WSU Project Manager.

3. Consultants are responsible for hiring a Survey Consultant to resolve additional information requirements above and beyond WSU Record Drawings and GIS data.

4. When essential to confirm pre-design survey work, Consultants may request WSU utility locates through the WSU Construction Manager (not the One-Number Locator Service).

C. Pre-Excavation Utility Locating Services: This case applies to pre-excavation utility locates only; not for utility shutdowns.

1. Pre-Excavation Meeting: Contractor shall schedule a Pre-Excavation Meeting through the WSU Construction Manager prior to contacting the One-Number Locator Service. This affords the opportunity to assess potential impacts of excavation and coordinate with WSU Facilities Services Operations and the appropriate public utilities.

2. Contractor shall request utility locations through the One-Number Locator Service (for public utilities such as Avista) and the WSU Construction Manager (for WSU Facilities Services personnel).

3. WSU Facilities Services personnel will mark utility locations (located utilities as well as available information on unlocatable utilities) per the standard procedures of RCW 19.122.

4. Standard utility marking colors:

   i. Red = Electrical

   ii. Yellow = Steam, Condensate, Gas, Oil, Petroleum

   iii. Orange = Telecommunications

   iv. Blue = Drinking Water

   v. Green = Sewer

   vi. Purple = Non-Drinking Water (including Chilled Water)

   vii. Pink = Survey Marks

   viii. White = Excavator Marks, Excavation Boundary

5. Contractors are responsible for maintaining accurate utility locations per the requirements of RCW 19.122.

D. Utility Shutdown Services:

1. Contractor shall request utility shutdowns through the WSU Construction Manager at least 10 working days in advance.

2. WSU Facilities Services cannot guarantee approving shutdowns on the requested date(s) (even when requested 10 working days in advance):

    i. Shutdowns require WSU personnel to exercise local valves and frequently to conduct temporary shutdowns (domestic water, steam lines, electrical, etc.) in order to verify existing conditions and confirm site isolation prior to the Contractor's requested shutdown and/or connections to new work.

    ii. Temporary utility shutdowns may affect ongoing research and other critical University functions, and require prior notification and coordination with faculty and staff in the affected locations.

1.03 DUMPSITE AND HAULING CONSIDERATIONS

A. Contractor shall perform excavation and hauling so as to provide the least impact to public safety, existing campus infrastructure, and daily university operations.

B. Contractor shall submit all proposed haul routes to the WSU Construction Manager for review and approval prior to commencement of hauling operations. Haul routes shall be selected to minimize the need to operate in the campus core, and to minimize the impact on students, faculty, and staff. The Contractor shall, when hauling over existing roadways, be responsible for maintenance during use of roadway and for restoration to original condition upon completion.

    1. Note that the lowest overhead clearance (and the maximum permissible height for trucks and equipment) on Stadium Way is 13'5" (Gannon-Goldsworthy pedestrian overpass).

C. Contractor trucks shall not exceed AASHTO HS20 design loads without specific approval from the WSU Construction Manager.

D. If the project requires a temporary access road to the site or to a University dumpsite, the Contractor shall establish, maintain and remove (if necessary) said access road. Maintenance shall continue during periods of bad weather so alternate dumpsites are not required. Contractor shall make provisions as necessary to ensure the uninterrupted flow of required University traffic.

E. Trucks shall be equipped with proper sidewalls and/or covers to ensure total containment of debris in transit to the dump site.

1.04 OTHER DESIGN CONSIDERATIONS AND PROJECT SPECIFICATION REQUIREMENTS

A. Tunnel Protection: Contractor shall take all necessary precautions for protecting the steam tunnels from equipment damage. Contractor shall not move or park any equipment or heavy loads over tunnel lids. Contractor shall not move or park any equipment or heavy loads over or adjacent to the University's steam tunnels without first providing necessary shoring and planking (approved by the Structural Engineer of Record) to distribute wheel loads and to prevent chipping of edges. Depending on the type of traffic, utility tunnels may require interior shoring and protection. The Engineer of Record shall recommend tunnel protection requirements during late design development or early construction development phase, to be approved by WSU Engineering Services.

B. Debris Disposal:

1. All demolition and construction debris shall be removed from site and disposed of in a legal landfill or other legal location.

2. Contractor shall not dispose of any construction debris in any University dumpsters unless contracted with WSU Waste Management for debris disposal.

3. Contractor is responsible for maintaining a written chain of custody for disposal of all hazardous and asbestos-containing materials, and shall furnish record copies to the WSU Construction Manager and Environmental Health and Services (EH&S). See also the requirements of Section 02 40 00 “Demolition and Structure Moving.”

C. Excess Earth Disposal:

1. Topsoil: If topsoil from an excavation is of acceptable quality (determined by WSU Facilities Services) it shall be retained in the WSU Topsoil Storage Yard. Contractor use of the Topsoil Storage Yard requires approval of the WSU Construction Manager and the Director of Plant Services.

   i. If Contractor is found to have placed unacceptable or unapproved material in the WSU Topsoil Storage Yard, Contractor shall be responsible for removing said materials and relocating to an acceptable disposal facility at the Contractor’s expense.

2. Contractor shall dispose of all other excess earth from excavation off campus in a legal fashion.

3. If excess earth from an excavation is removed under the provisions of an NPDES permit, stormwater protection provisions of the permit apply wherever the soil is deposited.

D. Blasting shall not be permitted under any circumstances. Typically specify mechanical removal or expansive breaking of rock.

E. Excavations shall be performed without destabilizing any adjacent building structure.

1.05 MAINTENANCE AND CORRECTION

A. Contractor shall make necessary repairs to pavement, sidewalks or other structures which may be damaged as a result of post-construction settlement for a period of five (5) years after substantial completion or acceptance of the work, whichever is earlier. Contractor shall confirm this via written warranty.

1.06 QUALITY ASSURANCE

A. WSU shall retain a Special Inspector to perform on-site observation and testing services. During the course of construction, the Inspector will advise the WSU Project Manager in writing, with copy to the Contractor, if any work does not appear to conform to the Contract Documents.

PART 2 - PRODUCTS

2.01 GENERAL

A. Local native soils are unsuitable for anything but landscape fill and embankments.

B. Structural fills have to be imported to campus. Locally, crushed basalt of various size is the primary aggregate source from several quarrying operations. Most structural fill applications can be provided from local quarries.

C. All rounded aggregates for drainage or other purposes have to be imported anywhere from 40 to 90 miles away. When design dictates the need for these types of aggregates, consider that their costs are significantly higher than locally quarried and crushed aggregates.

D. The use of Controlled Density Fill (CDF), a sand, cement, and water slurry capable of attaining over 100 psi, has proven to be an efficient method of backfill. Where compaction around utilities or tight structures is necessary, CDF may be a cost effective alternate to mechanically compacted fills. Specification of CDF is acceptable where it is compatible with design. Also consider the use of CDF in locations where vibration from compaction equipment may be detrimental to the University's operations.

PART 3 - EXECUTION

3.01 EXISTING UTILITIES

A. Confirmation of Utility Locations: The Contractor is responsible to maintain due diligence when performing work on the WSU campus, even after WSU Facilities Services and public utilities personnel have marked existing utility locations. All marked locations of existing utilities are approximate. The Contractor is responsible to verify correct utility locations via potholing, probing, or other means approved by the WSU Construction Manager.

B. Excavation Confirmation Code: During construction, all Contractors performing excavation work shall maintain a copy of the excavation confirmation code, issued by the One-number Locator Service (per RCW 19.122), at the project site.

C. Obstructions or Utilities Encountered during Excavation:

1. Contractor shall immediately notify the WSU Construction Manager in the event an underground obstruction or uncharted utility is encountered.

2. WSU Construction Manager shall coordinate with WSU Facility Information Resource Management (FIRM) to conduct on-site GPS surveys, while utilities remain exposed, for updating the WSU Graphic Information Systems (GIS).

D. Contractor is responsible for all costs for damage to utilities shown on the drawings or identified by locating process.

END OF SECTION

DIVISION 31 – EARTHWORK
31 23 00 EXCAVATION AND FILL
31 23 33 TRENCHING AND BACKFILLING

PART 1 - GENERAL

1.01 TRENCHING

A. References:

1. All trenching and shoring shall conform to the requirements of WAC 296-155, Part N.

2. Trenching, testing and backfilling of buried utilities shall conform to Division 7 of the current adopted edition of the Washington State Department of Transportation (WSDOT) Standard Specifications for Road, Bridge and Municipal Construction.

3. WSU Standard Detail Drawings:

   i. C 31 23 33 “Standard Utility Trench & Pipe Placement”

   ii. C 33 05 13 “Standard Manhole”

   iii. C 33 41 00 “Perforated Storm Drain Pipe Placement and Backfill”

4. Trenching and backfill operations shall also comply with WSU Design Standard 31 00 00 “Earthwork.”

PART 2 - PRODUCTS

2.01 CONTROLLED DENSITY FILL (CDF)

A. The use of Controlled Density Fill (CDF), a sand, cement, and water slurry capable of attaining over 100 psi, has proven to be an efficient method of backfill. Where compaction around utilities or tight structures is necessary, CDF may be a cost effective alternate to mechanically compacted fills. Specification of CDF is acceptable where it is compatible with design. Also consider the use of CDF in locations where vibration from compaction equipment may be detrimental to the University's operations.

PART 3 - EXECUTION

3.01 FIELD QUALITY ASSURANCE

A. WSU may retain a Special Inspector to perform on-site observation and testing services. During the course of construction, the Inspector will advise the WSU Project Manager in writing, with copy to the Contractor, if any work does not appear to conform to the Contract Documents.

3.02 TESTING AND BACKFILL PROCEDURES

A. Notification and Scheduling: The Contractor shall notify the WSU Construction Manager (CM) and submit testing procedures in writing at least 48 hours prior to testing.

B. Measuring and Recording: WSU CM shall coordinate with WSU Facility Information Resource Management (FIRM) to conduct on-site GPS surveys, while utilities remain exposed, for updating the WSU Geographic Information Systems (GIS). Contractor shall not completely backfill underground utilities until locations and depths have been observed and recorded by WSU FIRM staff.

C. Backfill and Compaction: Contractor shall not completely backfill underground utilities until the appropriate tests have been completed and observed by authorized WSU Facilities Services personnel. Contractor shall backfill pipe sufficiently to prevent movement of the pipe under pressure; joints and fittings shall remain exposed for inspection during pressure testing. Contractor shall ensure all required concrete thrust blocks are in place and sufficiently cured before testing.

1. See specific requirements for testing utilities in the WSU Design and Construction Standards for those particular utilities.

2. Contractor is responsible for properly securing, stabilizing, and securing all piping, fittings, and connections prior to and throughout testing procedures.

3.03 OVER EXCAVATION

A. Contractor shall correct, at no additional cost to WSU, when trench is over-excavated without authority or to stabilize a trench rendered unsuitable through negligence or improper operations.

END OF SECTION

DIVISION 32 – EXTERIOR IMPROVEMENTS
32 80 00 IRRIGATION

PART 1 - GENERAL

1.01 DESIGN REQUIREMENTS

A. Design shall be square or triangular spacing and head to head coverage.

B. Electrical Design: Consultant is responsible for informing the Electrical Engineer or coordinating the electrical design, with the requirements for the control system power during the design phase of the project.

C. Areas to be Irrigated: All planted areas adjacent to major buildings shall have automatic underground sprinkler systems. All new planting and turf is to be scheduled for irrigation unless specifically designed to thrive without supplementary watering.

D. System shall be designed with balanced precipitation rates within each zone and zoned to accommodate the horticultural requirements of different plant material, wind, terrain, site exposure and slope. (i.e., lawn vs. shrub or ground cover, sloped vs. flat, and northern vs. southern exposure.)

E. Pipe:

1. Design piping plans with 45 degree and 90 degree angles only.

2. Bends in pipe shall not exceed 18 degrees in 20 feet.

3. Install no more than two lines per trench.

4. When laying two lines in a trench, they shall be laid side by side and never stacked, with a minimum of 2–inches between lines.

5. Install fittings at least 6–inches apart.

F. Sleeving and Conduit:

1. Show required sleeving and conduit on Irrigation drawings. Coordinate with Prime Consultant and Civil Engineer to ensure cross-referencing with Architectural and Civil drawings.

G. Valves:

1. Isolation Valves: Provide main line isolation valves to divide the main line into manageable segments. Select locations to isolate major branches of the system or individual athletic fields where possible.

i. Isolation valves shall be installed in vertical Schedule 40 PVC pipe (minimum 6–inch diameter) within a 10–inch round valve box.

2. Check Valves: Provide check valves only on lateral lines for every 12 feet of elevation change.

3. Shrub zones and lawn zones shall have separate valves.

4. Each automatic valve shall be installed in a valve box.

5. Automatic valves shall be installed in-line, with no valves closer than 24–inches apart.

6. Provide unions on both sides of valves.

H. Sprinkler Heads:

1. Maximum sprinkler head height shall be 6–inches.

2. Sprinkler heads shall be installed on 3-way swing joints.

3. Sprinkler heads shall be located no closer than 3–inches from walkway or curb.

I. Winterization:

1. Design and install ¾ inch or 1 inch quick couplers to enable system "blow out."

2. Provide manual drain valves at all major low points in the system. When feasible, connect to the storm drainage system.

1.02 MAINTENANCE SCHEDULE

A. Consultant shall provide a schedule of proposed maintenance for approval by the WSU Grounds Department. Maintenance schedule shall include, but not be limited to:

1. Seasonal winterization and start-up of the system.

2. Monitoring and adjusting automatic controller scheduling.

3. Checking and adjusting elevation of valve boxes and irrigation heads.

B. The Contractor shall continue to be responsible for maintaining all irrigation systems and equipment for a period of 120 days after Landscaping Substantial Completion. See PART III – EXECUTION.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Pipe:

1. Laterals: PVC Schedule 40

2. Main Lines: PVC Schedule 40

    i. High-Density Polyethylene (HDPE) shall not be used on mainlines.

3. Repair of existing galvanized steel pipe will typically require matching existing pipe in lieu of PVC. Clarify requirements with WSU Grounds Shop.

4. Quick Couplers: Schedule 40 galvanized steel, painted and wrapped

5. Swing Joints: All swing joints shall be Schedule 40, 90-degree street elbow (HDPE material) with Schedule 80 PVC nipples.

    i. Swing joints shall consist of the same size pipe as the inlet on the head.

    ii. Swing joints shall be made with pipe standard length of 6–inches (+/- 2–inches depending on site conditions).

    iii. All swing joints at end of line shall be installed on a PVC 90 degree slip thread Schedule 40 PVC elbow.

6. Sleeves: All pipe and wire installed under any paved surface (roads, walks, paths, curbs, walls, stairs, etc.) shall be sleeved.

    i. Schedule 40 PVC, minimum 6–inch diameter.

    ii. Specify service line polyethylene pipe in sleeve runs greater than 20 feet.

    iii. No glued fittings in a sleeve; only solid lines.

B. PVC Cement and Primer:

1. Primer: Weld-On P-70 Primer

2. Cement: Weld-On 711 PVC Solvent Cement, gray

C. Valves:

1. Valve - Auto Control:

    i. Acceptable Manufacturers: Rain Bird model PEB

2. Curb Stop Ball Valves:

i. Material: Bronze

ii. Acceptable Manufacturers:

1) Meuler
2) Ford

3. Check Valves:

i. Acceptable Manufacturers: King Brothers

4. Master Valves:

i. Acceptable Manufacturer: Rain Bird EFA/EFB, brass

D. Flow Meter:

1. Flow meter and the required dimensional straight pipe run shall be sized one pipe size smaller than the main line diameter.

2. Acceptable Manufacturer: Calsense FM series, brass

E. Vaults and Boxes:

1. Install no more than one valve per valve box.

2. Valve boxes shall be set with top at grade in lawns and 1–inch above grade in shrub zones.

3. Automatic valves between 1 – 2 inches:

i. Install in a Carson or Rain Bird Valve Box, 11 x 17 inches.

4. Automatic valves larger than 2–inches:

i. Install in a Jumbo Carson Valve Box, 14 x 21 inches.

5. Install Hose Bibs and Quick Couplers in 10–inch round Carson Valve Boxes**.**

F. Irrigation Heads:

1. Materials:

i. Plastic

ii. Stainless Steel

2. Provide additional spare heads of each model equal to 10 percent of the quantity to be installed.

3. Pre-Approved Manufacturers:

   i. Sprayheads:

      1) Rain Bird 1800 Series (without SAM or PRS)
      2) Hunter

   ii. Rotors:

      1) Hunter

G. Automatic Controller:

1. All controllers shall be Calsense ET2000e series with LR (internal local radio modem) and RRe (enhanced radio remote receiver board) components.

H. Automatic Controller Enclosure:

1. The controller shall be housed in a factory pre-assembled, UL-listed, weather proof, lockable, powder-coated steel enclosure (by Calsense) suitable for wall mounting or freestanding pedestal mounting.

   i. Wall mount: Specify stainless steel backboard (Calsense SSBP option); top of board shall be 6 feet above ground level.

   ii. Pedestal mount: Specify 38–inch height with flip top to provide easy access for programming from a standing position under normal installations.

   iii. Controller enclosure shall be mounted outdoors.

   iv. Enclosure shall come complete with lightning and surge protection.

   v. All terminals shall be factory labeled.

   vi. On/Off switch shall be provided to isolate controller along with GFI receptacle.

   vii. Optional radio antenna premounted and connected on SSE-R enclosure shall be included.

2. Ten year warranty on enclosure and Calsense installed equipment within shall be provided.

I. Control Wires:

1. All control wire shall be copper, type UF, single strand, UL approved for 24-50 volts, rated for direct burial.
    i. Lengths up to and including 1000 feet: #14
    ii. Lengths greater than 1000 feet: #12
2. Provide one spare wire to each valve group manifold.
3. Insulation colors on control wires:
    i. Positive: Red
    ii. Common: White
    iii. Spares: Orange
    iv. Flow Meter wire: Red and Black
    v. Master Valve wire: Yellow

J. Wire Splices:

1. Splices shall be made with Spears DS-400 or approved equivalent.
2. No splices allowed on flowmeter wiring.
3. No splices allowed in sleeves.
4. Any splice shall be protected in a 10–inch round valve box.

K. Pumps:

1. See technical requirements in Section 22 06 10 13 “Plumbing Pumps.”
2. Pumps shall be housed on a concrete pad above grade and protected from the elements in a weather-tight and insulated protective encasement or housing.
3. Pumps shall not be installed in a buried or below-grade vault or structure.

L. Backflow Prevention Assemblies:

1. See Section 33 12 13.13 “Water Supply Backflow Prevention Assemblies.”
2. Wherever possible, install Backflow Prevention Assemblies in the nearest adjacent building, preferably in the Mechanical Room.

3. When indoor installation is not feasible, install Backflow Prevention Assemblies in a concrete vault, 30 wide x 36 long x 32 high inches.

    i. Vaults shall be bottomless, with a minimum 6–inches of 5/8– inch minus gravel for drainage.

M. Quick Couplers and Hose Bibs:

1. All hose bibs shall be brass, with 45 degree angle.

    i. Pre-Approved Manufacturer: Champion HB2M

2. All quick couplers and hose bibs shall be put on 3-way swing joints.

3. Quick couplers for irrigating shall be 3/4–inch (Rainbird 33D).

4. Quick couplers for system winterization shall not exceed 1–inch (Rainbird 44D).

PART 3 - EXECUTION

3.01 QUALIFICATIONS

A. Irrigation Contractor/Installer shall be a company specializing in irrigation work, with a minimum 5 years of documented experience in irrigation installation of a similar nature.

3.02 INSTALLATION

A. Layout:

1. Contractor shall advise Consultant and WSU Project Manager of any discrepancies between drawings and actual ground measurements prior to beginning installation.

2. Contractor shall check correlation between heads and any trees, hydrants, signs, street lights, etc., and notify Project Representative of any potential conflict.

B. Pipe:

1. PVC pipe shall be snaked slightly in trenches.

2. Buried pipe depth:

    i. Main lines: 18–inches

    ii. Lateral lines: 12–inches

3. Backfill pipe with debris-free native soil.

4. Install fittings no closer than 6–inches apart.

5. Swing joints shall not be installed until after pressure tests.

6. Follow manufacturer's instructions for gluing of joints. Allow PVC joints to set up between gluing and application of water pressure per manufacturer's recommendation.

7. Weld PVC pipe in temperatures following manufacturer's recommendation.

8. In rainy or wet conditions, weld PVC pipe under cover.

C. Sleeves:

1. All sleeve locations shall be marked on new concrete using WSU Facilities Services concrete stamp for Irrigation Sleeve. Stamp is available at no charge to the Contractor for temporary use. Coordinate with WSU Construction Manager or WSU Grounds Staff.

D. Flow Meter:

1. Install per manufacturer's specifications.

2. Assembly includes flow meter and required runs of pipe before and after the meter.

3. Provide one extra orange wire in flowmeter / master valve harness.

E. Sprinkler Heads:

1. Use bottom inlet of sprinkler heads only.

2. All heads next to sidewalk or curbs shall be ½ – 1 inch below level of walk or curb.

3. All heads in the center of shrub beds shall be 1 - 1½ inches above final grade.

F. Wiring:

1. Contractor shall provide power to the controller locations.

2. Control wire shall be installed in rigid PVC conduit from the base of the controller to one foot below grade. Flowmeter and master valve wire shall be installed in rigid 1–inch PVC conduit. All other control wire shall be direct buried.

3. Lay wire in trenches under pipe.

4. All buried wires shall be taped into bundles (taped every 15 feet), except if installed in conduit or sleeve.

5. Provide a coil of wire minimum 24–inches long at valve.

6. Provide 24–inches of uncoiled wire inside controller cabinet.

7. Provide a 12–inch expansion and contraction loop at every valve box, corner, and every 100 feet of wire length in the trench.

8. There shall be no splices in the wire in new systems except at valves. Any spliced required occur to connect with existing systems must be first approved by the WSU Grounds Department.

3.03 FIELD QUALITY CONTROL

A. Pressure Testing: Pressure testing shall be observed by the WSU Construction Manager and WSU Grounds Staff as follows:

1. Contractor shall notify WSU Construction Manager at least 24 hours prior to pressure testing.

2. The Contractor shall use test equipment in good condition and test equipment shall have no leaks at couplings which might compromise test procedure.

3. After zone valves are installed, pressure test main at 100 psi. System will pass when it maintains test pressure for the 30 minute test period.

4. Any leaks will be corrected and the test will begin anew. The process will be complete when systems hold with no noticeable drop in pressure for 30 minutes.

5. Lateral Lines: With lateral tees capped, pressure test by pumping system to 100 psi. The system testing will be accepted when it maintains100 psi for 30 minutes with no noticeable drop in pressure.

6. Test shall be performed with all fittings, valves, connections, couplings and all other connection points exposed until the completion and acceptance of the pressure test.

B. Flushing System: Flushing shall be observed by the WSU Construction Manager and WSU Grounds Staff as follows:

1. All lines shall be flushed after swing joints are installed.

2. After all new irrigation piping and risers are in place and connected, all necessary division work has been completed and prior to installation of irrigation heads, all control valves shall be opened and a full head of water used to flush out the system completely. Flush until water flows clear and no debris is caught in a fine mesh strainer placed over each of several outlets - including all outlets at end of lines.

3. All heads shall be installed immediately after flushing.

C. Coverage Testing: Coverage testing shall be observed by the WSU Construction Manager and WSU Grounds Staff as follows:

1. Contractor shall notify the WSU Construction Manager at least 24 hours prior to the performance of the Coverage Test.

2. After system is 100 percent installed, a water coverage test will be performed to determine whether water coverage and operation of the system is adequate for planting, without areas of excessive flooding, dry spots, areas of insufficient overlap, or excessive over spray. If the WSU Construction Manager determines the system inadequate due to poor workmanship or materials, it shall be rejected or repaired at the Contractor's expense and both pressure and coverage tests repeated until accepted.

3.04 CLEAN UP

A. Area shall be kept reasonably free of debris at all times.

B. Upon completion, all debris and excess materials shall be removed and all walks and roadways shall be swept and washed. Contractor shall ensure sediments are not carried into the storm drain system.

3.05 120-DAY MAINTENANCE PERIOD

A. The Contractor shall continue to be responsible for maintaining all irrigation systems and equipment for a period of 120 days after Landscaping Substantial Completion.

B. The Contractor shall supply all labor, supervision, materials, and equipment to meet all specifications during this period. After completion of the Maintenance Period, the Contractor shall turn over management of the site to WSU Grounds, using a written agreement coordinated through the WSU CM.

3.06 WARRANTY PERFORMANCE

A. Throughout the one-year Landscaping Warranty Period (see Section 32 90 00 “Landscaping”), Contractor shall monitor and maintain the new irrigation

system in an operational and water-efficient condition. Contractor shall ensure balanced irrigation rates, no excessively wet or dry areas, and properly functioning equipment including pump, controller, backflow prevention, valves and heads.

END OF SECTION

DIVISION 32 – EXTERIOR IMPROVEMENTS
32 90 00 LANDSCAPING

PART 1 - GENERAL

1.01 SCOPE:

A. This document provides guidelines that shall be used for all WSU facilities that require Landscape Architectural (LA) design and construction services.

B. References: Project specifications and work execution shall comply with the most current edition of the following:

1. "American Standard for Nursery Stock" ANSI Z60.1, regarding:

i. Size

ii. Nomenclature

iii. Handling

2. ANSI A300

1.02 SCOPE OF WORK

A. Construction Documents shall include provisions for all material, labor, supervision, security, supplies, and equipment for a complete project. The Landscape Architect (LA) Designer shall develop requirements and specifications for the following:

1. Inspection of all plants and related materials. Inspection requirements shall address quality assurance at the source nurseries, upon delivery, during installation, throughout the warranty period, and at the end of warranty and final acceptance.

2. Staging plans for plants, materials, and equipment.

3. Stabilization of sensitive plant stocks at delivery.

4. Timely installation and maintenance.

5. Protection of plants (including existing trees and plants at the project site and adjacent areas), soils, and other plant related materials from contamination or damage.

1.03 DESIGN CONSIDERATIONS

A. Selection of Plant Materials:

1. The LA Designer shall submit a preliminary planting plan not later than the 50% Design Development document submittal. Plan shall be reviewed by the WSU Grounds Staff and LA Professional Staff, coordinated by the WSU PM. The plan shall include, but is not limited to:

i. A list of all plants intended to be used on site, identified by botanical and common names, including variety and their intended functions.

ii. The location of all plants on the Landscape Plan.

B. Safety:

1. Human health, safety, security, accessibility and welfare shall be the primary considerations in all Landscape Architecture design.

2. Visibility:

i. Landscaping shall not inhibit area lighting and visibility, or provide hiding places. Consideration shall be given to visibility requirements at vehicular traffic and pedestrian sight lines. Visibility shall not be inhibited by new planting or future growth.

3. Pedestrian Hazards:

i. Designs shall not allow buildup of ice or mud on constructed pedestrian surfaces. Ensure no unsafe conditions are created, especially in the winter when daily freeze/thaw cycles can create icy pedestrian surface conditions and/or damage constructed elements.

1) Design for management of surface flow from irrigation, precipitation, and ice/snowmelt.
2) Prevent surface flow or runoff from moving over any constructed pedestrian surface.
3) Pay particular attention to drainage next to stairs, especially those equipped with automatic snowmelt.

ii. Fruiting and cone-bearing trees and plants shall not be used near paved pedestrian surfaces. Their use is allowed in turf or grass-covered pedestrian areas, except for conifers bearing large cones (greater than 4–inches long) which can interfere with mowers.

4. Plant Placement:

   i. Obstructions and Damage: Do not site plant material next to building air exhausts or building air intakes. Do not site plants so that they block access to or function of emergency equipment, maintenance access or security equipment. Do not use species next to constructed surfaces that will develop root systems that will heave, crack or otherwise damage those surfaces.

   ii. Poisonous or Dangerous: Do not locate plants that pose physical or chemical hazards in the campus core, next to child care facilities, campus housing or in proximity to any pedestrian traffic. In areas adjacent to agricultural or veterinary livestock do not specify plants that pose a physical or chemical hazard to any animals.

   iii. Pest Management: Leave at least a three foot bare swath of ground around structures to minimize pest harborage and pests entering buildings.

C. Landscape Grading and Drainage:

1. Coordinate all landscape grading and drainage with civil designs. Components shall be compatible with existing campus grading and drainage systems (see Section 33 40 00 “Storm Drainage Utilities”) and approved by the WSU Project Manager and WSU Landscape Architect staff.

2. Slopes shall be carefully considered with regard to maintenance constraints, stormwater management, snow melt management, and human safety.

3. Drainage:

   i. Minimum grades shall ensure adequate surface drainage, with 25:1 (4%) being the preferred minimum in drainage areas.

ii. Where possible, use maximum grades of 3:1 (33%) or less. If grades steeper than 3:1 are required, consider using retaining walls.

D. Pedestrian Access and Circulation:

1. Pedestrian Desire Lines: The Designer shall identify pedestrian traffic paths and desire lines over all surfaces. Design pedestrian surfaces and plantings to facilitate traffic flow on these paths and desire lines.

2. Accessibility: To the extent possible on a given site, landscaped areas intended for public use shall be ADA accessible.

E. Maintenance Considerations:

1. Groundcover: Do not design large areas of ground cover plantings.

2. Protecting Fixtures:

i. In areas that will be maintained by lawnmowers or snow removal equipment, design the landscape furnishings and systems to protect components from maintenance equipment. Ensure an 8 foot wide area of access.

3. Plant Spacing:

i. Space plantings at 80% of the anticipated diameter of plants at maturity.

4. Planting Beds:

i. Planting beds shall be covered with Red Fir, medium course bark mulch within 24 hours of planting. Place to a maximum depth of 2–inches, ensuring placement is at least 1/2–inch below grade at walk edges. Keep bark mulch 3–inches away from plant stems.

ii. Do not specify weed control fabric in planting beds.

5. Lawn Mower Access:

i. Lawns, other planting, and constructed elements shall be designed to allow access by an 8 foot wide lawn mower. Design lawn edges with corners rounded at a radius not less than 5 1/2 feet.

ii. Mowed Surfaces

1) If a slope is to be planted as a lawn and machine mowed, then a 3:1 (33%) grade is the maximum grade that shall be allowed.
2) For surfaces that are to be machine mowed, round the tops and toes of slopes to ensure that an 8 foot wide mower deck does not contact the soil and cause damage.

iii. Mow-strips: Design concrete mow-strips where lawns abut vertical surfaces. See Section 32 17 00 “Paving Specialties.”

iv. Do not specify metal edging adjacent to lawn areas.

6. Snow Removal:

i. The Designer shall prepare a snow plowing route, stacking, and removal plan that includes provisions for conveyance of snow melt and ice formation away from buildings, traffic and pedestrian surfaces. Vertical elements such as trees, shrubs and light poles shall be set back a minimum of one foot from each side of maintained pedestrian surfaces. The Designer shall coordinate with WSU Grounds Staff and LA Professional Staff through the WSU PM.

ii. Design snow storage areas that do not produce pedestrian hazards.

iii. Automatic Snowmelt: See Sections 32 17 43 “Pavement Snow Melting Systems – Hydronic and Electric”.

1.04 QUALITY ASSURANCE

A. The Designer shall specify requirements for all submittals (including Safety Data Sheets) related to this section, to include but not be limited to: plants, grass seed and sod, soils, soil amendments, testing, mulch, fertilizers, chemicals and other items listed below.

B. Plant Material Inspection Certificates: Submit all inspection certificates that are required by law or by these specifications to accompany each shipment of plant materials.

C. Plant and Seed Bags Tags: Delivered plants and seed bags shall each have a legible label giving the common and botanical plant name in accordance with the "Standardized Plant Names", as issued by the "American Joint Committee on Horticulture Nomenclature". If plants are bundled or in multiple unit containers, one tag shall be placed on the bundle and shall additionally give the number of plants contained in the bundle or container.

D. Plant Condition: Plants shall be in vigorous health, relatively free of wounds or damage, and free of all pests and diseases. They shall conform to all size and form specifications. Measurements for making these determinations on B&B stock shall be taken from the top of root flair.

PART 2 - PRODUCTS AND MATERIALS

2.01 GENERAL

A. Chemical Usage: Contractor shall coordinate with the Facilities Services CM to notify those on the Chemical Sensitivity Notification List.

B. Plant Material Substitution: If a specified plant cannot be obtained, coordinate substitution through the WSU CM, for approval by the WSU Grounds Staff or LA Professional Staff.

PART 3 - EXECUTION

3.01 PROTECTION

A. Existing Trees and Plants

1. Existing plants designated to remain on the project site or adjacent to the project site shall be protected from all project activities, including chemical use and shut-off of irrigation.

2. The Contractor shall be responsible for the protection of existing plants. Existing trees shall have their "Critical Root Zone" (CRZ) protected from any construction disturbance. The CRZ is defined as a circle around the trunk that is one (1) foot in radius for every one (1) inch of trunk diameter measured 4-1/2 feet above grade (Diameter at Breast Height, DBH). In the case of trees with significant importance to the campus as determined by WSU Grounds or Landscape Architecture staff, the CRZ may be increased up to one and one-half (1.5) foot radius for every one (1) inch in DBH. In no case shall the CRZ be less than eight (8) feet. Exceptions need to be approved by WSU PM or CM prior to execution.

3. WSU will evaluate and establish a replacement value for all trees within the construction site prior to the start of construction activities. In addition, the WSU PM or CM shall document construction related damages and shall notify the WSU Grounds Staff or Landscape Architect Staff to assess tree damage. In general, any tree or other type of plant that has suffered damage that threatens its viable structure as a consequence of construction-related activities shall be considered for replacement. WSU

will determine whether Direct Replacement, Assessed Valuation, or a combination will be used.

i. Tree Valuation: The tree assessment and replacement value shall be established using the International Society of Arboriculture Guidelines and the WSU Tree Removal and Replacement Policy (see Appendix A of Section 32 93 43 “Trees”).

ii. Direct Replacement: Plants shall be replaced commensurate with their value. Replacement plants shall be installed using the same procedures, specifications, grading standards, and warranty as required for installation of new plants, at no cost to WSU.

iii. Assessed Valuation: The Contractor shall be assessed damages in accordance with established values in the WSU Tree Removal and Replacement Policy.

4. If Contractor damages areas outside the contract limit, the Contractor shall fully restore these areas to their original condition, at no cost to WSU.

B. Newly Planted Plants: Protection of newly planted plants shall be the sole responsibility of the Contractor. WSU will exercise its right to reject plantings that have been impacted or compromised.

C. Roots:

1. No equipment, material stockpiling, equipment/material wash-down or maintenance drainage, chemical dispersing or work shall be permitted within the CRZ. No fluids or chemicals (wet or dry) brought to the site shall be allowed to move into the CRZ by either surface flow, subsurface flow, or wind, unless intended for use within the CRZ and applied in accordance with the project specifications and manufacturer’s instructions.

2. Removal of Interfering Roots, Stems and Trimmings: Removal of interfering roots and branches shall be supervised by WSU Grounds Staff or LA Professional Staff.

3. Open trenches shall not be routed within the CRZ of plants that are to be preserved.

D. Water Stress: Contractor shall prepare a watering plan to ensure that all plants on site and in adjacent areas do not experience water stress.

E. Protective Fencing: Existing trees and plants whose CRZ is within the construction zone shall have their CRZ be fully enclosed by sturdy, immobile protective fencing that entirely encloses the CRZ of any protected trees. No construction activities, materials or waste storage, or parking shall take place within the CRZ.

F. Temporary Platforms within Protected Areas: If approved by the WSU CM and Grounds Staff or LA Professional Staff, the Contractor may build a temporary work platform over protected plants. The protective platform shall be designed to prevent soil compaction and to permit the passage of water and air to plant root systems by using minimum ground contact supports, bark mulch cushioning, and choosing equipment that minimizes footprint PSI. All protective measures shall be completed before any work is started within protected area.

3.02 CONSTRUCTION ACTIVITIES

A. Care of Landscape Areas: If at any time the Contractor judges that the protection of a tree or other plant type is incompatible with required work, the Contractor shall immediately notify the WSU CM and does no further work affecting the plants until the CM has issued clarification.

B. General Submittal Requirements: The Contractor shall ensure receipt, distribution, review and approval by the LA Designer and the WSU Grounds Staff or LA Professional Staff (through the WSU CM) of all submittals, including but not limited to: plants, chemicals, organic amendments, mulches, fertilizers, additives and other items addressed in this section. Contractor shall provide a site plan showing the Critical Root Zones of each existing tree to be preserved and the location of protective fencing. Submittals shall include all appropriate Safety Data Sheets (SDS).

C. Inspections of Planting and Seed Stocks

1. Inspections: Formal inspections shall be identified on the Contractor's Quality Assurance & Control Program checklist. The WSU Grounds Staff or LA Professional Staff shall notify the WSU CM of the inspection outcomes.

i. The first inspection shall be at the time of delivery of plants to the project site. The Contractor shall notify the WSU CM 48 hours prior to delivery on campus.

ii. The WSU Grounds Staff or LA Professional Staff shall monitor conditions – in conjunction with the WSU Construction Manager – and make on-site adjustments and corrections as plants are being installed.

iii. See details below for Landscaping Substantial Completion inspection.

2. Inspection Criteria: All plant and seed stocks shall meet or exceed the following, deliverable at the time of installation:

i. Accurately named and labeled.

ii. Be healthy, free of pests and disease, and well-formed.

iii. Be accompanied by inspection certificates required by law, certifying that plants have passed inspection for plant diseases and pest infestations. Inspection certificates shall be provided to the WSU CM.

3.03 PLANT MATERIALS PLANTING

A. Protection: Protect plants at all times during planting operations. Prevent roots from drying out. When materials detrimental to plant growth are encountered, such as hardpan, rubble fill, adverse drainage conditions, or obstructions, notify the WSU CM before planting. No planting shall be done during freezing weather or similarly unfavorable planting conditions.

B. Water Infiltration: Flood planting pits and ensure that local infiltration allows drainage of water from pit within 24 hours. If one or more pits do not drain within 24 hours, do not plant in the affected locations; immediately notify the WSU CM to determine alternatives.

C. Handling Plants Supplied as Balled and Burlap (B&B) Stock:

1. Installation:

i. Install plants so that the root flair is at or slightly above grade. Remove burlap, twine, wire supports, baskets, and other debris from the planting pit. Dispose legally off campus.
ii. Handle plants by root ball only and so as to prevent damage to roots or disturbance of root ball. Plant without delay.

2. Backfill and Watering:

i. Topsoil taken from the planting pits shall be used as backfill for the plant material.

ii. Planting pit diameter shall be at least twice that of the root ball.

iii. During backfilling, gently work topsoil in and around the root ball, filling all voids, and moistening soil as needed. Topsoil shall be in firm contact with entire top outer edge of root ball. When backfill is complete, water slowly and thoroughly until the root ball and backfill are saturated. If settling occurs in backfill, add topsoil to bring back to finish grade without delay.

3.04 LANDSCAPING SUBSTANTIAL COMPLETION

A. To determine Landscaping Substantial Completion, the Contractor, LA Designer, WSU CM, WSU Grounds staff, and WSU LA staff shall conduct an inspection of all Landscape Architecture elements. At completion of this inspection:

1. The WSU CM shall prepare a Punch List of all additional landscape requirements.

2. The Punch List shall include a list of all plants on watch list or designated for replacement along with scheduling of replacements.

B. The WSU CM shall publish in writing the date of Landscaping Substantial completion. The date of Landscape Substantial Completion shall:

1. Initiate the 90/120-day Maintenance Period by Contractor.

2. Initiate the start of the one-year warranty period for all plants (except trees).

3. Determine which Warranty Growing Seasons will constitute the two-season warranty period for trees (see Section 32 93 43 “Trees”).

3.05 90/120-DAY MAINTENANCE PERIOD

A. Landscaping (General): The Contractor shall continue to be responsible for a period of 90 days after Landscaping Substantial Completion for all landscaping elements (except for grass-seeded areas and hydroseed; see below).

B. Grasses (Seed and Hydroseed): The Contractor shall continue to be responsible for grass-seeded and hydroseed areas for a period of 120 days after Landscaping Substantial Completion.

C. The Contractor shall supply all labor, supervision, materials, and equipment to meet all specifications during this period. After completion of the Maintenance Period, the Contractor shall turn over management of the site to WSU Grounds, using a written agreement coordinated through the WSU CM.

3.06 OPERATIONS AND MAINTENANCE (O&M) MANUALS

A. Not later than 30 days after date of Landscaping Substantial Completion, the Contractor shall submit maintenance documents for all constructed elements, including O&M manuals, to the WSU CM for approval. At a minimum, these documents shall specify:

1. The end date the 90/120-day Maintenance Period and handover of landscaping maintenance to Grounds staff.

2. The scheduled dates for the one-year and two-year Warranty Final Inspections.

3. O&M requirements for all electrical, mechanical, and stormwater management systems.

4. Irrigation schedule

3.07 WARRANTY

A. Warranty Periods: Warranty on all landscape elements and plants (except trees), shall be one year from date of Landscaping Substantial Completion. For tree warranties, see Section 32 93 43 “Trees”.

B. Replacement of Plant Stocks during Warranty Period:

1. Replacement shall be as soon as general site and seasonal conditions allow.

2. Removed plants shall be replaced using direct replacement. All certifications, standards and grades that apply to original plant stocks shall apply to replacement plant stocks.

3. Scheduled inspections shall be conducted by the Contractor, WSU CM, WSU Grounds Staff, WSU LA Staff, and in select cases the LA Designer. WSU CM shall schedule and coordinate inspections.

i. Regular Ongoing Inspections: The WSU CM and Grounds Staff shall regularly conduct unscheduled inspections of the project site

throughout the 90/120-day Maintenance Period and the one and two-year Warranty Periods.

ii. First Year: A scheduled inspection of all Landscape Architecture elements shall be conducted prior to one year from the date of Landscaping Substantial Completion. Defects in materials and workmanship shall be the responsibility of the Contractor and covered under warranty. Damages from other causes shall be the responsibility of WSU.

iii. Second Year: Trees shall have a minimum of four inspections through the two-year Warranty Period, which encompasses two Warranty Growing Seasons. A final scheduled inspection of all trees shall be conducted just prior to two years from the date of Landscaping Substantial Completion. Defects in materials and workmanship shall be the responsibility of the Contractor and covered under warranty. Damages from other causes shall be the responsibility of WSU.

PART 4 - QUALITY (NOT APPLICABLE)

PART 5 - WARRANTY (NOT APPLICABLE)

PART 6 - TRAINING REQUIREMENTS (NOT APPLICABLE)

PART 7 - STOCK AND SPARE PARTS (NOT APPLICABLE)

PART 8 - PRE-INSTALL REQUIREMENTS (NOT APPLICABLE)

PART 9 - SPECIAL INSPECTIONS (NOT APPLICABLE)

PART 10 - SHOP DRAWINGS (NOT APPLICABLE)

PART 11 - SPECIAL INSTRUCTIONS OR PROVISIONS (NOT APPLICABLE)

END OF SECTION

DIVISION 32 – EXTERIOR IMPROVEMENTS
32 90 00 LANDSCAPING
32 92 00 TURF AND GRASSES

PART 1 - GENERAL

1.01 INTRODUCTION

A. Preferred Methods for Installation of Turf: On the Pullman, Tri-Cities and Spokane campuses, sod is the preferred method of turf installation. On the Vancouver campus seeding may be preferred. Preferred methods at other locations shall be developed in consultation with the Project Manager (PM) and WSU professional staff.

1.02 DESIGN CONSIDERATIONS

A. Fertilization Plan: The Designer shall require the Contractor to prepare a Fertilization plan that addresses the composition of fertilizers applied. The plan shall specify locations and timing relative to worksite scheduling. Designer shall use the results of soil analysis testing to determine the N-P-K levels of inorganic fertilizers to be used, the form of slow release nitrogen to be used, timing of applications and rates of application for each location. Coordinate maintenance applications with turf grow-in applications and with worksite staging plan.

B. Fertilization Time: Do not specify application rates greater than one pound of nitrogen per 1000 square feet per month.

PART 2 - PRODUCTS AND MATERIALS

2.01 SEED MIXES:

A. Turfgrass seed mix for the Pullman Campus:

i. 60% by weight Perennial Rye blend of three varieties
ii. 30% by weight Kentucky Bluegrass
iii. 10% by weight Magic Chewing Fescue

B. Prairie Grass / Native Grasses

1. Planned locations for “Prairie Grasses” or “Native Grasses” requires approval from WSU Grounds. These mixes may not be acceptable in some locations due to fire hazard.

2. Grassland LoGro Mix

i. 40% Perennial Ryegrass
ii. 40% Creeping Red Fescue
iii. 20% Hard Fescue

3. Noxious Plus Competitor Mix
    i. 50% two varieties of Fescue
    ii. 40% two varieties of Wheatgrass
    iii. 5% bluegrass
    iv. 5% Wild rye

4. Erosion Control Mix
    i. 80% 4 varieties of Fescue
    ii. 10% bluegrass
    iii. 10% Sterile Wheatgrass

2.02 HYDROSEEDING:

A. Submit hydroseed mulch, fertilization, application, and stabilization plan through the WSU Construction Manager for approval by WSU Grounds Staff or LA Professional Staff.

B. Hydroseed Mulch: Application rates, cellulose fiber, and soil binding agent (tackifier) shall comply with hydroseed mulch manufacturer's recommendations.

2.03 SOD:

A. Designer shall specify sod only from pre-approved turf farms.

B. Sod shall be in vigorous health, relatively free of damage, and free of all pests and diseases.

PART 3 - EXECUTION

3.01 CONSTRUCTION ACTIVITIES

A. General Area Preparation & Care

1. New grass to be placed on existing grade requires 6-inches or more of topsoil:

    i. Avoid loosening or damaging the root system of existing trees and shrubs.

    ii. If surface material is acceptable, topsoil shall be prepared from existing surface material that has been cleaned, ground, and blended to meet specifications.

        1) Acceptable surface material is uncompacted, unpolluted, free of all construction debris, and has a pH between 5.5 – 8.3.

iii. If surface material is not acceptable, it shall be removed to a depth of 6-inches or more, and replaced with new imported topsoil.

iv. In all cases, scarify the subgrade to a depth of 3-inches before placing topsoil.

v. After inspection of subgrade by the WSU Construction Manager or Grounds Staff, Contractor shall place and till the topsoil in 3-inch lifts. Fine grade and roll to a smooth, even surface. Feather topsoil into new and existing grades up to existing tree and shrub driplines.

2. In general, do not plant new grass under the dripline of existing trees or shrubs. When this is required, consult with WSU Grounds Supervisor for guidance.

3.02 QUALITY CONTROL:

1. Submittals and Inspections: Comply with requirements of Submittals and Inspections of Plant and Seed Stocks per Section 32 90 00 “Landscaping.”

i. Seed Mix: Shall be "certified" grade or better, with less than 1% weed content and less than 2.5% inert material content. Seed that has become wet, moldy, or otherwise damaged shall not be accepted.

ii. Sod: Contractor shall provide a minimum 30 square foot sample prior to sod approval.

iii. Hydroseed Tackifier: Only guar gum tackifiers shall be used. Polyacrylamide-based tackifiers are not acceptable.

iv. Fertilizer: A copy of each fertilizer certificate of composition shall accompany the Safety Data Sheet (SDS) for that material when it is provided to Designer, WSU PM/CM, and WSU professional staff. Each original certificate shall be attached to each container of commercial fertilizer delivered to site. The original certificate shall be delivered to the WSU CM, Grounds staff, or Landscape Architect (LA) Professional staff as the container is opened at the time and location of application.

2. Delivery, Storage and Handling: Deliver seed in original unopened containers. Store all materials in a manner that will prevent the deterioration of the seed or additives. Seed and additives are subject to inspection for conformity to specifications and approval by the Designer, WSU PM/CM, Grounds staff, and LA Professional staff.

3. Acceptance of Area to be Seeded: The Contractor shall notify the WSU CM not less than three working days in advance of any seeding operation for owner inspection of prepared area. Contractor shall not begin the work until areas have been reviewed and inspected by the WSU CM, Grounds staff, or LA Professional staff and corrected as necessary. Following corrective work, seeding of approved areas shall begin without delay.

3.03 PLANTING:

A. Mechanical Seeding (Not hydroseeding): Moisten prepared lawn areas before planting if soil is very dry and allow surface to dry before seeding. Do not create a muddy soil condition. Sow seed using a spreader or seeding machine at a rate specified. Distribute seed evenly over entire area by sowing equal quantities in two directions at right angles to each other. Roll lightly and water with a fine spray so as to ensure complete seed-to-soil contact.

B. Hydroseeding:

1. Field Quality Control:

i. Contractor is responsible for protecting all surfaces, trees, and plants adjacent to hydroseed operations.

ii. Equipment: Hydroseed equipment shall use pure water as the carrying agent utilizing a continuous built-in agitation system. Equipment with a gear pump is not acceptable.

iii. Apply Seed at Specified Rate and Coverage: Apply hydroseed slurry at the rate and area coverage specified. Prior to application, the WSU CM or LA Professional Staff must review and approve the specific boundaries of area(s) to receive each load of seed. Areas completed to finish grade and approved for installation shall be seeded only after approval.

iv. Fertilizer shall not be applied during hydroseed operations. Fertilization of soil shall be applied prior to seed operations in order to bring topsoil nutrients to acceptable levels; this shall be documented by post-amendment soil testing.

v. All slurry mixed in one load shall be delivered and applied.

vi. Owner On-site Sampling at Time of Application: Designer, PM or representative shall sample applied materials to determine whether minimum density of seed has been evenly applied. If uniform density

has not been achieved, Contractor shall re-seed or infill to achieve specifications.

vii. Owner Sampling of Germination: WSU LA Professional Staff shall sample germinated seed to determine that rate of application, germination, and mix of species meet specifications.

viii. Contractor shall provide all empty or partially filled sacks and labels to WSU LA Professional staff upon completion of application.

2. Hydroseed Application:

i. Application Rates: (Adjust rates as required by conditions.) The following rates are suggested for the Pullman campus:

1) Hydromulch: 2000 pounds per acre (40 pounds per 1000 square feet).
2) Soil Binding Agent (tackifier): 45 pounds per acre (1 pound per 1,000 square feet).
3) Seed and Fertilizer: Per project specifications.

ii. Hydroseed Application Timing:

1) The LA Designer shall specify when hydroseeding shall be done. This will vary depending on planting plan and site conditions. In general, seeding should be done from April 15 - June 15, or August 15 - October 1.
2) No seeding shall be done on weekends or legal holidays without prior written approval. All premium time to WSU staff shall be compensated back to WSU.
3) Hydroseed operations shall not be performed during windy conditions (sustained or gusts above 25 mph) or when soil is saturated or frozen.

C. Sod Application: Designer shall specify the following and Contractor shall coordinate in the Worksite Staging Plan.

1. Delivery of sod shall be only after there is enough prepared and approved space on site for at least one day's sod application.

2. Palletizing: During shipping, sod shall be well covered on all sides to prevent drying.

3. Installation of Sod: Water soil lightly to provide moist condition for root contact. Unroll or place mats in same direction each time. Keep sod sections tightly butted to prevent edges from drying out. Stagger sod

section joints in a running pattern, placing the long axis of the mat running horizontally along face of any slope. Start laying sod at the bottom of the slope and work up the slope. Roll without delay before watering. If necessary, use boards or plywood paths at least 24-inches wide to walk on, to protect sod already placed.

i. Sod final subgrade shall be one inch below the level of any adjacent paved surfaces.
ii. Allow a 2 foot radius space free of sod around each tree trunk, and fill space with bark mulch up to root flair.

4. Water and Protect: Apply irrigation within 30 minutes after installation. After sod is in place, water carefully to saturate soil to a depth of 6-inches, taking care to prevent erosion between or beneath sod units. Protect newly placed sod.

3.04 MAINTENANCE AND WARRANTY:

A. Maintenance Period: See Section 32 90 00 “Landscaping”.

B. Warranty Period: See Section 32 90 00 “Landscaping”.

END OF SECTION

DIVISION 33 – UTILITIES
33 05 00 COMMON WORK RESULTS FOR UTILTIES
33 05 26 UTILITY IDENTIFICATION

PART 1 - GENERAL

1.01 BURIED UTILITY MARKING AND IDENTIFICATION

A. All newly installed buried utilities shall be identifiable with continuous tracer wire and underground locator tape.

1. Pipe tracer wire shall be physically attached to buried pipes and run up from the top of valve through the valve box sleeve. Terminate tracer wire at valve boxes and other surface appurtenances (i.e., FDC, PIV, etc.)

i. No tracer wire splices permitted in runs 1000' or less. If required distance exceeds 1000', obtain approval from WSU Engineering Services before installing splices. Underground slice kits required.

ii. Tracer wire shall be listed for direct burial (i.e., HDPE-type tracer wire).

iii. Tracer wire shall be free of any abrasions or cuts on the exterior jacket.

iv. Route tracer wire in valve boxes in such a manner to prevent wire damage.

2. Underground locator tape shall be 2-inch wide tape identifying the corresponding utility (water, storm, sewer, electric, gas, etc.), buried two feet above the utility line.

i. Locator tape not required for electrical circuits <100 amps and <1000 volts.

ii. Coordinate with WSU Construction Manager for marking utilities buried < 2 ft deep.

B. Utility locations and depths shall be clearly identified and submitted on Record Drawings.

C. WSU Standard Detail Drawings:

1. C 31 23 33 "Standard Utility Trench & Pipe Placement"

2. C 33 05 13 "Standard Manhole"

3. C 33 41 00 "Perforated Storm Drain Pipe Placement and Backfill"

PART 2 - PRODUCTS

2.01 CONTROLLED DENSITY FILL

A. The use of Controlled Density Fill (CDF), a sand, cement, and water slurry capable of attaining over 100 psi, has proven to be an efficient method of backfill. Where compaction around utilities or tight structures is necessary, CDF may be a cost effective alternate to mechanically compacted fills. Specification of CDF is acceptable where it is compatible with design. Also consider the use of CDF in locations where vibration from compaction equipment may be detrimental to the University's operations.

1. When utilities lines are cast in CDF, CDF shall be dyed in accordance with standard marking colors for ease of future identification:

i. Red = Electrical

ii. Yellow = Steam, Condensate, Gas, Oil, Petroleum

iii. Orange = Telecommunications

iv. Blue = Drinking Water

v. Green = Sewer

vi. Purple = Non-Drinking Water (including Chilled Water)

PART 3 - EXECUTION

3.01 OBSTRUCTIONS OR UTILITIES ENCOUNTERED DURING EXCAVATION:

A. See procedures in Section 31 00 00 “Earthwork” when excavation reveals previously unknown or unlocatable utilities.

3.02 VALVE NUMBERING AND TAGGING

A. Install brass identification tags, stamped with the appropriate valve number, on all valve covers for domestic water and campus chilled water. Tag shape and number shall identify the appropriate utility:

1. Domestic Water tags shall be rectangular.

2. Chilled Water tags shall be round.

B. Coordinate through the WSU Construction Manager to obtain appropriate valve number sequences from WSU Utilities staff.

C. WSU Valve Numbering Format:

   i. Digits 1-2: Utility (High Pressure Water, Low Pressure Water, or Chilled Water)

   ii. Digits 3-5: Location per WSU 40-scale maps

   iii. Digits 6-7: Valve number sequence

   iv. Example: “WHL14-21” = Water (High Pressure), Map Sheet L14, Valve 21

END OF SECTION

DIVISION 33 – UTILITIES
33 10 00 WATER UTILITIES

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

A. The WSU Pullman campus is independently supplied by groundwater wells with four emergency interties with the City of Pullman. These wells pump domestic water from the Grande Ronde Aquifer. The water network fed by these groundwater wells is divided into two pressure zones: high and low. Both zones are available for domestic water or fire protection. The transfer station at Observatory Hill pumps water from the low zone to the high zone, and multiple crossover valves throughout the campus are capable of connected the two zones when required. Several reservoirs throughout campus maintain pressure and provide fire flow storage. The following are critical components of the water system:

1. Two active wells supply the high zone (Wells 6 & 8)

2. Two active wells supply the low zone (Wells 4 & 7)

3. Two emergency wells (Wells 1 & 3)

4. Two reservoirs on the high zone: North Fairway Reservoir (2M gallons) and the Observatory Hill High Tank (100,000 gallons)

5. Two reservoirs on the low zone: Observatory Hill Reservoirs East and West (2M gallons each)

B. Connections to the two water zones shall be specifically engineered based on available site water pressures and project requirements. Designers and Contractors are responsible to confirm planned connections to the two zones with the WSU Construction Manager.

1. Designers shall reference the WSU Record Drawing archives and WSU Graphic Information Systems (GIS) for known existing conditions.

2. In order to verify available water pressure at the project site, WSU Facilities Services will furnish fire service flow test results measured at the nearest available fire hydrants.

1.02 SPECIFIC DESIGN REQUIREMENTS

A. Water system designs shall meet the requirements of the most current editions of Chapters 246-290 WAC and the Washington State Department of Health (DOH) Water System Design Manual.

B. The minimum diameter for service mains shall be 12 inches.

C. Mains shall be buried at least 48 inches below finished grade (to the top of the pipe).

D. Designers shall calculate yearly average domestic demand as the product of a 60 gallons per capita per day usage and projected population densities.

1. Calculate maximum daily rate as 150% of this yearly average

2. Calculate maximum hourly rate as 250% of this yearly average.

3. System losses and unaccounted for usages shall be taken at 10 percent of the domestic demand.

E. Designers shall size branch lines to meet either the maximum hourly domestic demand or a combination of maximum daily domestic demand plus fire flow – whichever is larger.

F. The minimum diameter for service branch lines from the mains shall be four (4) inches. For buildings requiring smaller service connections, Designers may plan reductions at the curb line.

G. For design purposes, line velocities shall not average more than 5 feet per second. Plans and designs that exceed this velocity require approval from WSU Engineering Services.

H. No saddle taps are allowed for service connections. Use branch lines tees.

I. Design pipe bedding per WSU Standard Detail Drawing C 31 23 33 “Standard Utility Trench & Pipe Placement.”

PART 2 - PRODUCTS

2.01 GENERAL

A. Distribution main shall be one of the following (or approved equal):

1. C900 or C905 PVC

2. For sleeves, use ductile iron.

B. Fittings shall be class 350 ductile iron per the most current and adopted version of AWWA A21.53.

C. Jointing shall be mechanical.

1. Pre-approved manufacturers (alternatives require approval by WSU Engineering Services):

i. MegaLug
ii. ROMAC RG-PVC

D. Valves:

1. Shall be flanged, iron body, bronze mounted double disc gate; over eight (8) inches, valves to have non-rising stems. Maximum operating pressure shall be not less than 175 psi for valves up to twelve (12) inches.

2. Shall be installed vertically in level lines and shall meet most current and adopted version of AWWA C500 specifications. Flanges shall be faced and drilled, ASA Class 235, for use with full face gaskets.

E. Flanges shall be type 304 stainless steel or ductile iron, per most current ASTM 536-80, test rated at 200 psi, "Roman" Models SST or equivalent.

PART 3 - EXECUTION

3.01 GENERAL

A. Design and install thrust blocks in accordance with the current Water Agencies' Standards Design Guidelines for Water and Sewer Facilities and the manufacturer's recommendations.

B. Provide a Link-Seal assembly at the building penetration.

3.02 DISINFECTION

A. New or repaired public drinking water systems shall be disinfected prior to connection, in accordance with the standards of the most current Uniform Plumbing Code as modified by Chapter 51-56 WAC, and in accordance with the most current version of ANSI/AWWA C651, "Disinfecting Water Mains."

B. For installation of new lines and systems, the Contractor is responsible to ensure all chlorination is performed according to the most current version of ANSI/AWWA C651, and that adequate bacteriological sampling results are obtained from a WA State approved laboratory. Before placing new lines in service, submit written documentation of chlorination and bacteriological testing results to the WSU Construction Manager for review and approval by Environmental Health and Safety (EH&S) and the Water Distribution Manager.

3.03 TESTING

A. Conduct pressure testing in accordance with the manufacturer's recommendations. Contractor shall submit proposed pipe testing procedures to the WSU Construction Manager for review and approval by WSU Engineering Services.

B. No testing water or chlorinated water may be discharged into the sanitary or storm sewer system in accordance with the most current and adopted version of Washington Administrative Code (WAC) 173-201A. All chlorinated water shall either be treated to remove chlorine prior to discharge into sewers, or discharged into an area which does not impact storm drains or surface waters. If soil is the only contaminant, wastewater may be discharged into the storm sewer catch basins provided they are protected using Best Management Practices (BMPs), per the requirements of WSU section 33 40 00 (Storm Drainage Utilities).

C. The Contractor shall notify the WSU Construction Manager in writing at least 48 hours prior to testing. The Contractor shall make all necessary testing and sampling arrangements, making all necessary arrangements with the WA State approved testing laboratory. The Construction Manager shall notify the following of the date and time for flushing, testing, and bacteriological sampling:

1. Facilities Services Water Distribution Manager
2. WSU Environmental Health and Safety
3. Pullman Fire Department (for Fire Suppression Water systems only)

END OF SECTION

DIVISION 33 - UTILITIES
33 12 13.13 WATER SUPPLY BACKFLOW PREVENTION ASSEMBLIES

PART 1 - GENERAL

1.01 DESIGN REQUIREMENTS

A. General:

1. Backflow prevention shall be provided on all domestic water systems connections except for plumbing fixtures.

B. Design Considerations:

1. At the water main entry to the building, design and install two premises isolation backflow prevention assemblies in parallel, to ensure continuous operations when a backflow prevention assembly must be maintained or repaired.

2. An air gap drain for a Reduced Pressure Backflow Prevention Assembly (RPBA) shall be used and run to the sanitary sewer.

3. Backflow Protection Assemblies shall be installed in a protected equipment space, preferably the mechanical room of the facility they are serving.

4. No backflow prevention assembly shall be installed more than five feet above finish floor.

PART 2 - PRODUCTS

2.01 PRE-APPROVED MANUFACTURERS

A. Select all backflow preventions assemblies from the current list approved for use by the Washington State Department of Health, or in the current USC list of approved backflow prevention assemblies. The following manufacturers are acceptable; any other manufacturer requires approval by the WSU Project Manager and Engineering Services:

1. Febco

2. Watts

PART 3 - EXECUTION

3.01 FIELD QUALITY CONTROL

A. Assemblies shall be designed and installed in strict accordance with manufacturer's recommendations with proper clearances for testing and servicing.

B. All water faucets and hose bibs on non-potable water shall have signs posted stating “Non-Potable Water. Do not drink.”

C. WSU Cross-Connection Control Specialists shall review and approve all installations of backflow prevention assemblies, per WAC 246-290-490.

1. Notify WSU Construction Manager and Cross-Connection Control Specialists at least 48 hours prior to backflow prevention assembly testing.

2. Provide copies of the backflow prevention assembly testing results to the WSU Construction Manager and Cross-Connection Control Specialists.

END OF SECTION

DIVISION 33 – UTILITIES
33 12 00 WATER UTILITY DISTRIBUTION EQUIPMENT
33 12 19 WATER UTILITY DISTRIBUTION FIRE HYDRANTS

PART 1 - GENERAL

1.01 DESIGN CRITERIA:

A. Hydrants shall be designed to 150 psi working pressure and 300 psi hydrostatic test pressure.

B. Maximum hydrant spacing shall be 300 feet. No hydrant shall be located closer than 40 feet to any building wall.

C. Drain rock shall be 1–1/2 inch washed drain field rock. There shall be a minimum of 12–inches of drain rock surrounding the hydrant.

D. Hydrant shall be installed on a 12 x 12 x 4 inches concrete pad.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Hydrant:

1. Hydrant shall be Waterous Company Model WB-67 with two (2) 2–1/2 inch hose nozzles and one (1) 4–1/2 inch pumper nozzle.

2. The hydrant shall contain a flanged APE nozzle connection, 5–1/4 inch valve opening, a bronze seat ring, 1–1/2 inch pentagonal operating nuts (left opening) and standard nut nozzle caps with chains.

3. Outlet nozzle threads shall be National Standard Thread (NST) fire hose couplings.

B. Auxiliary Gate Valve and Box:

1. Hydrants shall be installed complete with auxiliary valve with adjustable height valve box.

C. Post Indicator Valve (PIV) shall be Kennedy #641 or approved equivalent.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install in accordance with standard detail C - XXXX and manufacturer's instructions.

CIP Summary Table

Project ID#	Project Name	Project Trigger	Total Estimated Cost (2022 Dollars)
Priority 1 Improvements (2022-2027)			
1.1	Complete PSV Installation	Currently under construction	$303,000
1.2	Complete South High Reservoir Construction	Currently under construction	$6,683,000
1.3	Well Overhaul 2024	Preventative maintenance/replacement	$250,000
1.4	Dodgen Research Facility Sprinkler Retrofit	AFF over 75% deficient	$390,000
1.5	Olympia Student Housing Looping	Regional AFF improvements	$210,000
1.6	Well Overhaul 2026	Preventative maintenance/replacement	$250,000
1.7	Chinook Student Center FF Improvements	AFF over 75% deficient	$330,000
1.8	Library Road and College Street PRV	AFF below 1,000 gpm at multiple hydrants	$300,000
1.9	Fairway Road, Cross Road and Clark Hall Looping	Regional AFF improvements	$400,000
1.10	Round Top Drive to Fairway Tank Upsize	AFF below 1,000 gpm at multiple hydrants	$2,710,000
1.11	Finalize campus metering	Required DOH - Deadline was January 2017	$6,130,000
		Total Priority 1 Improvements (rounded)	**$17,956,000**
Priority 2 Improvements (2027-2032)			
2.1	Observatory Hill Reservoir Replacement	Conditions Replacement	$13,480,000
2.2	Well Overhaul 2028	Preventative maintenance/replacement	$250,000
2.3	Grimes Way Upsize and Looping	AFF over 50% deficient	$2,680,000
2.4	Well Overhaul 2030	Preventative maintenance/replacement	$250,000
2.5	Campus Street and B Street Looping and Upsizing	AFF below 2,000 gpm at multiple hydrants	$560,000
2.6	Yakama, Chinook, and Columbia Village Upsizing	AFF below 2,000 gpm at multiple hydrants	$2,260,000
2.7	Stadium Way Looping	AFF below 2,000 gpm at multiple hydrants	$390,000
2.8	Well Overhaul 2032	Preventative maintenance/replacement	$250,000
		Total Priority 2 Improvements (rounded)	**$20,120,000**
Priority 3 Improvements (2032-2042)			
3.1	Terre View Drive Upsize	AFF below required fire flow	$770,000
3.2	Well Overhaul 2034	Preventative maintenance/replacement	$250,000
3.3	Valley Road, and Garden Avenue Improved Looping	AFF below required fire flow	$790,000
3.4	Well Overhaul 2036	Preventative maintenance/replacement	$250,000
3.5	Wilson-Short Hall and Johnson Tower Upsizing	AFF below 3,000 gpm at two hydrants	$300,000
3.6	Airport Road Upsizing	AFF below 1,000 gpm at multiple hydrants	$4,070,000
3.7	Olympia Avenue Looping	AFF below 3,000 gpm at two hydrants	$280,000
3.8	Well Overhaul 2038	Preventative maintenance/replacement	$250,000
3.9	Colorado Street Upsizing	AFF below 3,000 gpm at multiple hydrants	$560,000
3.10	Well Overhaul 2040	Preventative maintenance/replacement	$250,000
3.11	Stadium Way Check Valves	AFF below required fire flow	$160,000
3.12	Stadium Way to Wilson Road Upsizing	AFF over 50% deficient	$730,000
3.13	Systemwide Hydrant Improvements	Hydrants below 3,000 gpm	$1,530,000
3.14	Well Overhaul 2042	Preventative maintenance/replacement	$250,000
		Total Priority 3 Improvements (rounded)	**$10,440,000**
		TOTALWATER SYSTEM IMPROVEMENTS COSTS (rounded)	***$48,516,000***

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids or actual construction costs will not vary from the costs presented herein.

Unit Items	Unit	Unit Price (2022)
PVC Pipe		
8-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	LF	$ 170
10-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	LF	$ 190
12-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	LF	$ 200
Connect to Existing Water Main (10" & 12" Tapping Saddle and Valve)	EA	$ 12,000
Connect to Existing Water Main (6" & 8" Tapping Saddle and Valve)	EA	$ 8,000
Valves and Control Structures		
PRV with Vault and backflow valve (6" valve and smaller)	EA	$ 30,000
Modify Existing PRV with backflow	EA	$ 10,000
8-inch Gate Valve - Includes Installation	EA	$ 8,000
6-inch Check Valve and Vault	EA	$ 25,000
New 6-inch Hydrant Assembly	EA	$ 8,000
Surface Repair		
Roadway Restoration (Full Lane)	LF	$ 90
Gravel Surface Repair	LF	$ 20
Soil Surface Repair, Seeding, and Stabilization	LF	$ 10
Control Valve Vault Site Restoration	LS	$ 3,000
Concrete Surface Repair (Sidewalk, Curb and Gutter)	LF	$ 100
ADA Ramp Reconstruction (Compliance)	EA	$ 5,000
Misc.		
Traffic Control w/o Flaggers	LF	$ 10
Traffic Control w/ Flaggers	LF	$ 12
WSU Specific		
Dodgen Research Building Sprinker Installation (sprinklers only)	SF	$ 7
Fire Booster Pump	EA	$ 30,000
Observatory Hill Reservoir West Demolition	LS	$ 1,000,000
New 2.0 MG Reservoir (tank, site work, yard piping, electrical, SCADA)	LS	$ 6,000,000
Biennial Well Overhaul	LS	$ 250,000
Standard Fees (Unless otherwise noted)		
Mobilization and Administration	%	10%
Bonding	%	3%
Contractor Overhead and Profit	%	15%

Priority	Implementation Timeline	Description
1	0-5 Years	► Address PHD pressures below 30 psi without individual booster pumps ► Improve available fire flow below 1,000 gpm within the main campus ► Improve available fire flow where building AFF is over 75% deficient ► Regional improvements to AFF (increased AFF at more than five hydrants) ► Completion of projects currently in design or under construction
2	5-10 Years	► Improve available fire flow below 2,000 gpm for multiple adjacent hydrants ► Improve available fire flow where building AFF is over 50% deficient ► Improve transmission bottlenecks
3	10-20 Years	► Improve overall distribution of flows throughout the system ► Improve available fire flow to meet minimum 3,000 gpm at all hydrants ► Improve available fire flow to meet building specific fire demands

Washington State University

Water Master Plan

Project Title: Complete PSV Installation Project Identifier: 1.1	**Location:** Stadium Way, Well 8 Site, and Observatory Hill
Need for Project: - Install pressure sustaining valves between the High and Low Pressure Zones Objective: - Complete installation of the control valves Design Considerations: - Assumes installation in-house	

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
PSV Valve Installation	1	LS	$ 303,000	$ 303,000	
				Construction Subtotal	***$ 303,000***
				Total Project Costs (rounded)	**$ 303,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Complete South High Reservoir Construction

Project Identifier: 1.2

Location: Round Top Drive

Need for Project:
- New storage tank project is funded and currently in the design/construction phase

Objective:
- Add more storage to the High Pressure Zone

Design Considerations:
- **Assumes funding has been secured.**
- Exact alignment for new 12-inch pipe should be evaluated during design.

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
Assumes Funding has been secured	1	LS	$ 6,683,000	$ 6,683,000	
				Construction Subtotal	***$ 6,683,000***
				Total Project Costs (rounded)	**$ 6,683,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Well Overhaul 2024

Project Identifier: 1.3

Location: Well Site

Need for Project:
- Preventative maintenance and replacement of well components

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
Biennial Well Overhaul	1	LS	$ 250,000	$ 250,000	
				Construction Subtotal	***$ 250,000***
				Total Project Costs (rounded)	**$ 250,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Dodgen Research Facility Sprinkler Retrofit

Project Identifier: 1.4

Location: Dodgen Research Facility

Need for Project:
-Dodgen Research Facility's AFF is more than 75% lower than required fire flow

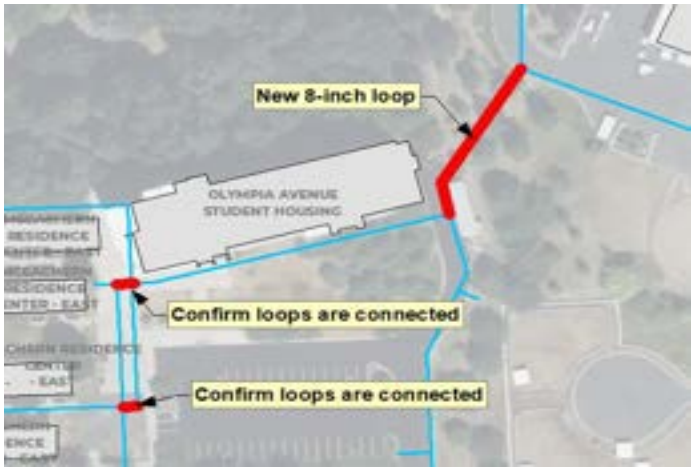
Objective:
- Install building fire sprinklers which reduces the required fire flow demand.

Design Considerations:
- Additional hydrant testing should be conducted to assess available fire flow in this area.
- Alternative improvements for creation of a new pressure zone should be considered. See Appendix X.2 for more details.
-Without creating a new pressure zone, the required fire flow at this facility cannot be met without building sprinklers.
-Coordinate with local fire authority for fire demand requirements.

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
Dodgen Research Building Sprinker Installation (sprinklers only)	24,100	SF	$ 7	$ 169,000	
Fire Booster Pump	1	EA	$ 30,000	$ 30,000	
				Construction Subtotal	***$ 199,000***
Additional Elements (estimated % of above)					
Mobilization and Administration			10%	$ 20,000	
Bonding			3%	$ 5,000	
Contractor Overhead and Profit			15%	$ 30,000	
Prevailing Wages			0%	$ -	
Contingency			30%	$ 60,000	
				Total Construction Subtotal	***$ 314,000***
Plans and Contract Documents					
Engineering Design and Bid Phase Services			12%	$ 38,000	
Engineering - Construction Contract Administration			4%	$ 13,000	
Engineering -- Inspection			4%	$ 13,000	
Permitting & Environmental			LS	$ -	
Geotechnical Investigation			LS	$ -	
Surveying			LS	$ -	
Legal, Administrative, and Funding			2%	$ 6,000	
				Total Project Costs (rounded)	**$ 390,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Olympia Student Housing Looping



Project Identifier: 1.5

Location: Near Olympia Student Housing

Need for Project:
-Regional improvements to AFF in southern Low PZ
- GIS indicates pipes are not looped

Objective:
-Improve looping and distribution during fire flow event

Design Considerations:
- Additional hydrant testing should be conducted to assess available fire flow in this area.
- Improves AFF at numerous hydrants which were below 2,000 gpm AFF.
- Costs assume loops are not connected.

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
8-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	190	LF	$ 170	$ 33,000	
Connect to Existing Water Main (6" & 8" Tapping Saddle and Valve)	6	EA	$ 8,000	$ 48,000	
Roadway Restoration (Full Lane)	30	LF	$ 90	$ 3,000	
Concrete Surface Repair (Sidewalk, Curb and Gutter)	60	LF	$ 100	$ 6,000	
ADA Ramp Reconstruction (Compliance)	1	EA	$ 5,000	$ 5,000	
Soil Surface Repair, Seeding, and Stabilization	100	LF	$ 10	$ 1,000	
Traffic Control w/o Flaggers	190	LF	$ 10	$ 2,000	
				Construction Subtotal	***$ 98,000***
Additional Elements (estimated % of above)					
Mobilization and Administration			10%	$ 10,000	
Bonding			3%	$ 2,000	
Contractor Overhead and Profit			15%	$ 15,000	
Prevailing Wages			0%	$ -	
Contingency			30%	$ 29,000	
				Total Construction Subtotal	***$ 154,000***
Plans and Contract Documents					
Engineering Design and Bid Phase Services			20%	$ 31,000	
Engineering - Construction Contract Administration			4%	$ 6,000	
Engineering -- Inspection			4%	$ 6,000	
Permitting & Environmental			LS	$ -	
Geotechnical Investigation			LS	$ -	
Surveying			LS	$ 10,000	
Legal, Administrative, and Funding			2%	$ 3,000	
				Total Project Costs (rounded)	**$ 210,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Well Overhaul 2026

Project Identifier: 1.6

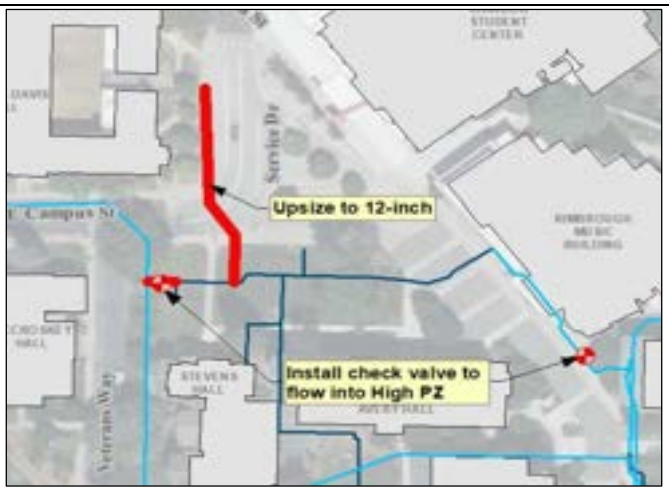
Location: Well Site

Need for Project:
- Preventative maintenance and replacement of well components

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
Biennial Well Overhaul	1	LS	$ 250,000	$ 250,000	
				Construction Subtotal	***$ 250,000***
				Total Project Costs (rounded)	**$ 250,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Chinook Student Center FF Improvements



Project Identifier: 1.7

Location: Chinook Student Center

Need for Project:
- AFF at Chinook Student Center is 75% lower than required fire flow.
-AFF below 1,000 gpm at several hydrants within this area of the High PZ.

Objective:
- Install two check valve from the Low PZ to the High PZ to supplement flows in the High PZ during a fire flow event. Upsize existing pipe to reduce headloss during a fire flow event

Design Considerations:
- Additional hydrant testing should be conducted to assess available fire flow in this area.
- Improves AFF at numerous hydrants which were below 1,000 gpm AFF.
- Install check valves with bypass if pressure zone boundaries are modified in the future.

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
8-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	30	LF	$ 170	$ 6,000	
12-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	190	LF	$ 200	$ 38,000	
6-inch Check Valve and Vault	2	EA	$ 25,000	$ 50,000	
Connect to Existing Water Main (6" & 8" Tapping Saddle and Valve)	4	EA	$ 8,000	$ 32,000	
Concrete Surface Repair (Sidewalk, Curb and Gutter)	100	LF	$ 100	$ 10,000	
Roadway Restoration (Full Lane)	60	LF	$ 90	$ 6,000	
Soil Surface Repair, Seeding, and Stabilization	60	LF	$ 10	$ 1,000	
Control Valve Vault Site Restoration	2	LS	$ 3,000	$ 6,000	
Traffic Control w/o Flaggers	220	LF	$ 10	$ 3,000	
				Construction Subtotal	***$ 152,000***
Additional Elements (estimated % of above)					
Mobilization and Administration			10%	$ 15,000	
Bonding			3%	$ 4,000	
Contractor Overhead and Profit			15%	$ 23,000	
Prevailing Wages			0%	$ -	
Contingency			30%	$ 46,000	
				Total Construction Subtotal	***$ 240,000***
Plans and Contract Documents					
Engineering Design and Bid Phase Services			20%	$ 48,000	
Engineering - Construction Contract Administration			4%	$ 10,000	
Engineering -- Inspection			4%	$ 10,000	
Permitting & Environmental			LS	$ -	
Geotechnical Investigation			LS	$ -	
Surveying			LS	$ 10,000	
Legal, Administrative, and Funding			2%	$ 5,000	
				Total Project Costs (rounded)	**$ 330,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Library Road and College Street PRV

Project Identifier: 1.8

Location: Library Road and College Street

Need for Project:
-AFF below 1,000 gpm at several hydrants in the west area of the High PZ
-AFF ~20% deficient at McCoy and Wegner Hall

Objective:
- Install an PRV with backflow between the High PZ and Low PZ to improve AFF in both Zones
- Install PRV to supplement Low PZ AFF
- Improves AFF at McCoy Hall and Wegner Hall by installing a hydrant on the Low PZ rather than High PZ

Design Considerations:
- Additional hydrant testing should be conducted to assess available fire flow in this area.

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
8-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	230	LF	$ 170	$ 40,000	
PRV with Vault and backflow valve (6" valve and smaller)	1	EA	$ 30,000	$ 30,000	
New 6-inch Hydrant Assembly	1	EA	$ 8,000	$ 8,000	
Connect to Existing Water Main (10" & 12" Tapping Saddle and Valve)	3	EA	$ 12,000	$ 36,000	
Concrete Surface Repair (Sidewalk, Curb and Gutter)	50	LF	$ 100	$ 5,000	
Roadway Restoration (Full Lane)	180	LF	$ 90	$ 17,000	
Control Valve Vault Site Restoration	1	LS	$ 3,000	$ 3,000	
Traffic Control w/o Flaggers	180	LF	$ 10	$ 2,000	
				Construction Subtotal	***$ 141,000***
Additional Elements (estimated % of above)					
Mobilization and Administration			10%	$ 14,000	
Bonding			3%	$ 4,000	
Contractor Overhead and Profit			15%	$ 21,000	
Prevailing Wages			0%	$ -	
Contingency			30%	$ 42,000	
				Total Construction Subtotal	***$ 222,000***
Plans and Contract Documents					
Engineering Design and Bid Phase Services			20%	$ 44,000	
Engineering - Construction Contract Administration			4%	$ 9,000	
Engineering -- Inspection			4%	$ 9,000	
Permitting & Environmental			LS	$ -	
Geotechnical Investigation			LS	$ -	
Surveying			LS	$ 10,000	
Legal, Administrative, and Funding			2%	$ 4,000	
				Total Project Costs (rounded)	**$ 300,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Fairway Road, Cross Road and Clark Hall Looping

Project Identifier: 1.9

Location: Fairway Road, Cross Road & near Clark Hall

Need for Project:
-AFF below 1,000 gpm in several areas of the High PZ.
- Poor looping and distribution of flows during PHD.

Objective:
- Improve looping of the High PZ to improve transmission of flows and AFF throughout the west end of the High PZ.

Design Considerations:
- Additional hydrant testing should be conducted to assess available fire flow in this area.
- Improves AFF at numerous hydrants which were below 1,000 gpm AFF.
- Alternative improvements should be considered. Modifications of pressure zones as discussed in Appendix X.2 would lower the priority of this project.

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
8-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	460	LF	$ 170	$ 79,000	
Connect to Existing Water Main (6" & 8" Tapping Saddle and Valve)	5	EA	$ 8,000	$ 40,000	
Connect to Existing Water Main (10" & 12" Tapping Saddle and Valve)	1	EA	$ 12,000	$ 12,000	
Concrete Surface Repair (Sidewalk, Curb and Gutter)	70	LF	$ 100	$ 7,000	
ADA Ramp Reconstruction (Compliance)	6	EA	$ 5,000	$ 30,000	
Roadway Restoration (Full Lane)	230	LF	$ 90	$ 21,000	
Soil Surface Repair, Seeding, and Stabilization	160	LF	$ 10	$ 2,000	
Traffic Control w/o Flaggers	460	LF	$ 10	$ 5,000	
				Construction Subtotal	***$ 196,000***
Additional Elements (estimated % of above)					
Mobilization and Administration			10%	$ 20,000	
Bonding			3%	$ 5,000	
Contractor Overhead and Profit			15%	$ 29,000	
Prevailing Wages			0%	$ -	
Contingency			30%	$ 59,000	
				Total Construction Subtotal	***$ 309,000***
Plans and Contract Documents					
Engineering Design and Bid Phase Services			15%	$ 46,000	
Engineering - Construction Contract Administration			4%	$ 12,000	
Engineering -- Inspection			4%	$ 12,000	
Permitting & Environmental			LS	$ -	
Geotechnical Investigation			LS	$ -	
Surveying			LS	$ 15,000	
Legal, Administrative, and Funding			2%	$ 6,000	
				Total Project Costs (rounded)	**$ 400,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Round Top Drive to Fairway Tank Upsize

Project Identifier: 1.10

Location: Roundtop Drive

Need for Project:
-AFF below 1,000 gpm in along Round Top Drive
- The Dodgen Research Center and Palouse Ridge Golf Club do not have adequate fire flow.

Objective:
- Upsize existing pipeline to provide over 1,000 gpm at hydrants along Round Top Drive.

Design Considerations:
- Additional hydrant testing should be conducted to assess available fire flow in this area.
- Improves AFF at numerous hydrants which were below 1,000 gpm AFF.
- Alternatives for a new higher pressure zone discussed in Appendix X.2 are consistent with this project.

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
12-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	5,050	LF	$ 200	$ 1,010,000	
Connect to Existing Water Main (10" & 12" Tapping Saddle and Valve)	5	EA	$ 12,000	$ 60,000	
Concrete Surface Repair (Sidewalk, Curb and Gutter)	210	LF	$ 100	$ 21,000

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Finalize campus metering Project Identifier: 1.11	**Location:** Campus-wide
Need for Project: -DOH requires full metering of water systems. -Original deadline for full metering was January 2017. -84% of gross square footage currently metered, but still require an additional 137 meters for housing facilities and 55 for smaller buildings. Objective: - Continue momentum to gain funding for completing metering of Housing facilities and all smaller budilings on campus. Design Considerations: - Cluster metering may be approved by DOH for groups of housing to minimize the total number of meters necessary.	

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
Water meters	216	EA	$ 15,000	$ 3,240,000	
				Construction Subtotal	***$ 3,240,000***
Additional Elements (estimated % of above)					
Mobilization and Administration			10%	$ 324,000	
Bonding			3%	$ 81,000	
Contractor Overhead and Profit			15%	$ 486,000	
Prevailing Wages			0%	$ -	
Contingency			30%	$ 972,000	
				Total Construction Subtotal	***$ 5,103,000***
Plans and Contract Documents					
Engineering Design and Bid Phase Services			10%	$ 510,000	
Engineering - Construction Contract Administration			4%	$ 204,000

Permitting & Environmental			LS	$ -	
Geotechnical Investigation			LS	$ -	
Surveying			LS	$ -	
Legal, Administrative, and Funding			2%	$ 102,000	
				Total Project Costs (rounded)	**$ 6,130,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Observatory Hill Reservoir Replacement

Project Identifier: 2.1

Location: Existing Observatory Hill Reservoir

Need for Project:
-Reservoir is reaching the end of its useful life and should be replaced or repaired
Objective:
-Install 8-inch loop into High PZ and move hydrant along Stadium Way into the Low PZ.
Design Considerations:
- Detailed tank inspection should be conducted to decide if tank can be repaired or if it should be replaced.
- Costs assume full replacement of the existing tank with a new 2.0 MG welded steel tank.

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
Observatory Hill Reservoir West Demolition	1	LS	$ 1,000,000	$ 1,000,000	
New 2.0 MG Reservoir (tank, site work, yard piping, electrical, SCADA)	1	LS	$ 6,000,000	$ 6,000,000	
				Construction Subtotal	***$ 7,000,000***
Additional Elements (estimated % of above)					
Mobilization and Administration			10%	$ 700,000	
Bonding			3%	$ 175,000	
Contractor Overhead and Profit			15%	$ 1,050,000	
Prevailing Wages			0%	$ -	
Contingency			30%	$ 2,100,000	
				Total Construction Subtotal	***$ 11,025,000***
Plans and Contract Documents					
Engineering Design and Bid Phase Services			12%	$ 1,323,000	
Engineering - Construction Contract Administration			4%	$ 441,000	
Engineering -- Inspection			4%	$ 441,000	
Permitting & Environmental			LS	$ -	
Geotechnical Investigation			LS	$ -	
Surveying			LS	$ 20,000	
Legal, Administrative, and Funding			2%	$ 221,000	
				Total Project Costs (rounded)	**$ 13,480,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Well Overhaul 2028

Project Identifier: 2.2

Location: Well Site

Need for Project:
- Preventative maintenance and replacement of well components

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
Biennial Well Overhaul	1	LS	$ 250,000	$ 250,000	
				Construction Subtotal	***$ 250,000***
				Total Project Costs (rounded)	**$ 250,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Grimes Way Upsize and Looping

Project Identifier: 2.3

Location: Grimes Way

Need for Project:
-AFF at Fine Arts Building, McCluskey Shop, Beef Breeding Barn, and Cattle Feeding Lab is 50% lower than required fire
Objective:
-Upsize existing pipes and improve looping.
Design Considerations:
- Additional hydrant testing should be conducted to assess available fire flow in this area.
- Improves AFF at numerous hydrants near the Airport Road corridor.
-Consider trenchless installation methods such as pipe bursting for upsized pipe.

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
8-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	570	LF	$ 170	$ 97,000	
12-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	3,730	LF	$ 200	$ 746,000	
Connect to Existing Water Main (6" & 8" Tapping Saddle and Valve)	2	EA	$ 8,000	$ 16,000	
Connect to Existing Water Main (10" & 12" Tapping Saddle and Valve)	5	EA	$ 12,000	$ 60,000	
Concrete Surface Repair (Sidewalk, Curb and Gutter)	820	LF	$ 100	$ 82,000	
ADA Ramp Reconstruction (Compliance)	9	EA	$ 5,000	$ 45,000	
Roadway Restoration (Full Lane)	2,950	LF	$ 90	$ 266,000	
Soil Surface Repair, Seeding, and Stabilization	530	LF	$ 10	$ 6,000	
Traffic Control w/o Flaggers	4,300	LF	$ 10	$ 43,000	
				Construction Subtotal	***$ 1,361,000***
Additional Elements (estimated % of above)					
Mobilization and Administration			10%	$ 136,000	
Bonding			3%	$ 34,000	
Contractor Overhead and Profit			15%	$ 204,000	
Prevailing Wages			0%	$ -	
Contingency			30%	$ 408,000	
				Total Construction Subtotal	***$ 2,143,000***
Plans and Contract Documents					
Engineering Design and Bid Phase Services			12%	$ 257,000	
Engineering - Construction Contract Administration			4%	$ 86,000	
Engineering -- Inspection			4%	$ 86,000	
Permitting & Environmental			LS	$ -	
Geotechnical Investigation			LS	$ 20,000	
Surveying			LS	$ 40,000	
Legal, Administrative, and Funding			2%	$ 43,000	
				Total Project Costs (rounded)	**$ 2,680,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

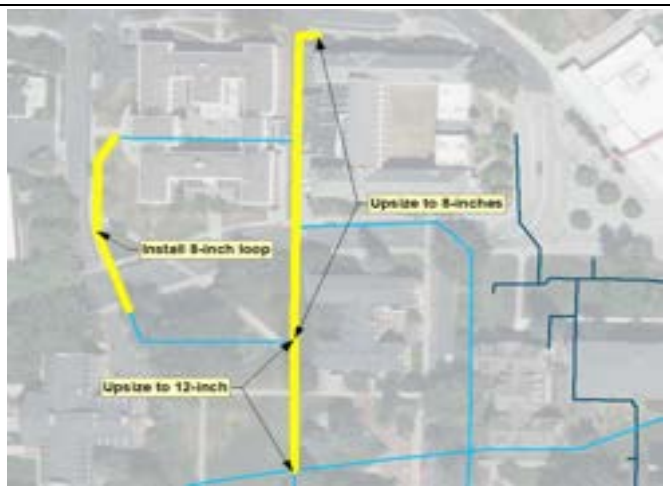
Project Title: Well Overhaul 2030

Project Identifier: 2.4

Location: Well Site

Need for Project:
- Preventative maintenance and replacement of well components

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
Biennial Well Overhaul	1	LS	$ 250,000	$ 250,000	
				Construction Subtotal	***$ 250,000***
				Total Project Costs (rounded)	**$ 250,000**



The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Campus Street and B Street Looping and Upsizing

Project Identifier: 2.5

Location: Campus Street and B Street

Need for Project:
-AFF below 2,000 gpm at multiple adjacent hydrants
Objective:
-Upsize existing pipes and improve looping.
Design Considerations:
- Additional hydrant testing should be conducted to assess available fire flow in this area.
- Alternative improvements should be considered. Modifications of pressure zones as discussed in Appendix X.2 may reduce the total length of new pipe to upsize or install.
-Consider trenchless installation methods such as pipe bursting for upsized pipe.

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
8-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	610	LF	$ 170	$ 104,000	
12-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	160	LF	$ 200	$ 32,000	
Connect to Existing Water Main (6" & 8" Tapping Saddle and Valve)	4	EA	$ 8,000	$ 32,000	
Connect to Existing Water Main (10" & 12" Tapping Saddle and Valve)	2	EA	$ 12,000	$ 24,000	
Concrete Surface Repair (Sidewalk, Curb and Gutter)	200	LF	$ 100	$ 20,000	
ADA Ramp Reconstruction (Compliance)	5	EA	$ 5,000	$ 25,000	
Roadway Restoration (Full Lane)	300	LF	$ 90	$ 27,000	
Soil Surface Repair, Seeding, and Stabilization	270	LF	$ 10	$ 3,000	
Traffic Control w/o Flaggers	770	LF	$ 10	$ 8,000	
				Construction Subtotal	***$ 275,000***
Additional Elements (estimated % of above)					
Mobilization and Administration			10%	$ 28,000	
Bonding			3%	$ 7,000	
Contractor Overhead and Profit			15%	$ 41,000	
Prevailing Wages			0%	$ -	
Contingency			30%	$ 83,000

Project Title: Yakama, Chinook, and Columbia Village Upsizing

Project Identifier: 2.6

Location: South of Olympia Avenue

Need for Project:
-AFF below 2,000 gpm at multiple adjacent hydrants
Objective:
-Install 12-inch transmission to provide additional fire flow
Design Considerations:
- Additional hydrant testing should be conducted to assess available fire flow in this area.
- Alternative improvements should be considered. Modifications of pressure zones as discussed in Appendix X.2 may reduce the total length of new pipe to upsize or install.

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
8-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	460	LF	$ 170	$ 79,000	
12-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	3,630	LF	$ 200	$ 726,000	
Connect to Existing Water Main (6" & 8" Tapping Saddle and Valve)	3	EA	$ 8,000	$ 24,000	
Connect to Existing Water Main (10" & 12" Tapping Saddle and Valve)	5	EA	$ 12,000	$ 60,000	
Concrete Surface Repair (Sidewalk, Curb and Gutter)	150	LF	$ 100	$ 15,000	
ADA Ramp Reconstruction (Compliance)	1	EA	$ 5,000	$ 5,000	
Roadway Restoration (Full Lane)	2,030	LF	$ 90	$ 183,000

Project Title: Terre View Drive Upsize

Project Identifier: 3.1

Location: Terre View Drive and North Fairway Road

Need for Project:
-AFF at Chief Joseph Village below required fire flow
-Existing 8-inch pipe is cast iron
Objective:
-Upsize the existing pipe to improve AFF
Design Considerations:
- Additional hydrant testing should be conducted to assess available fire flow in this area.
- Consider trenchless pipe installation method such as pipe bursting.

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
12-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	1,300	LF	$ 200	$ 260,000	
Connect to Existing Water Main (10" & 12" Tapping Saddle and Valve)	2	EA	$ 12,000	$ 24,000	
Roadway Restoration (Full Lane)	950	LF	$ 90	$ 86,000	
Soil Surface Repair, Seeding, and Stabilization	350	LF	$ 10	$ 4,000

Project Title: Valley Road, and Garden Avenue Improved Looping

Project Identifier: 3.3

Location: Valley Road and Garden Avenue

Need for Project:
-AFF below required fire flow for multiple buildings. Poorly looped 6-inch pipes
Objective:
-Install 8-inch loops and upsize to meet required fire flow demands.
Design Considerations:
- Additional hydrant testing should be conducted to assess available fire flow in this area.
- Review GIS to confirm looping of parallel pipes.

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
8-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	1,120	LF	$ 170	$ 191,000	
Connect to Existing Water Main (6" & 8" Tapping Saddle and Valve)	13	EA	$ 8,000	$ 104,000

Surveying			LS	$ 25,000	
Legal, Administrative, and Funding			2%	$ 13,000	
				Total Project Costs (rounded)	**$ 790,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Well Overhaul 2036

Project Identifier: 3.4

Location: Well Site

Need for Project:
- Preventative maintenance and replacement of well components

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
Biennial Well Overhaul	1	LS	$ 250,000	$ 250,000	
				Construction Subtotal	***$ 250,000***
				Total Project Costs (rounded)	**$ 250,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Wilson-Short Hall and Johnson Tower Upsizing

Project Identifier: 3.5

Location: NE Troy Lane

Need for Project:
-AFF below 3,000 gpm at two hydrants
Objective:
-Upsize existing 6-inch pipe to 8-inches to improve AFF
Design Considerations:
- Additional hydrant testing should be conducted to assess available fire flow in this area.
- Alternative improvements should be considered. Modifications of pressure zones as discussed in Appendix X.2 may eliminate the need for this project.

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
10-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	370	LF	$ 190	$ 71,000	
Connect to Existing Water Main (10" & 12" Tapping Saddle and Valve)	2	EA	$ 12,000	$ 24,000	
Concrete Surface Repair (Sidewalk, Curb and Gutter)	60	LF	$ 100	$ 6,000	
Roadway Restoration (Full Lane)	310	LF	$ 90	$ 28,000	
Traffic Control w/o Flaggers	370	LF	$ 10	$ 4,000	
				Construction Subtotal	***$ 133,000***
Additional Elements (estimated % of above)					
Mobilization and Administration			10%	$ 13,000	
Bonding			3%	$ 3,000	
Contractor Overhead and Profit			15%	$ 20,000	
Prevailing Wages			0%	$ -	
Contingency			30%	$ 40,000	
				Total Construction Subtotal	***$ 209,000***
Plans and Contract Documents					
Engineering Design and Bid Phase Services			20%	$ 42,000	
Engineering - Construction Contract Administration			4%	$ 8,000	
Engineering -- Inspection			4%	$ 8,000	
Permitting & Environmental			LS	$ -	
Geotechnical Investigation			LS	$ -	
Surveying			LS	$ 20,000	
Legal, Administrative, and Funding			2%	$ 4,000	
				Total Project Costs (rounded)	**$ 300,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Airport Road Upsizing

Project Identifier: 3.6

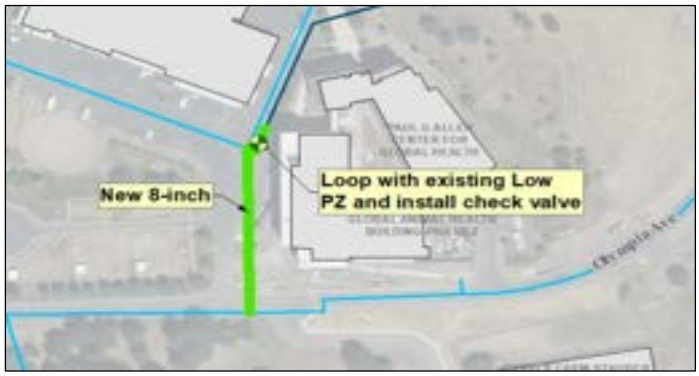
Location: Airport Road

Need for Project:
-AFF below 1,000 gpm at multiple adjacent hydrants outside of Main Campus

Objective:
-Upsize existing pipes to 12-inch to improve fire flow.

Design Considerations:
- Additional hydrant testing should be conducted to assess available fire flow in this area.
- Coordinate with local fire authority for fire requirements in this area.
- Consider interconnection with City of Pullman's pipeline along Terre View Drive to the Airport

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
12-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	8,640	LF	$ 200	$ 1,728,000	
Connect to Existing Water Main (10" & 12" Tapping Saddle and Valve)	4	EA	$ 12,000	$ 48,000	
Roadway Restoration (Full Lane)	2,420	LF	$ 90	$ 218,000	
Soil Surface Repair, Seeding, and Stabilization	6,220	LF	$ 10	$ 63,000	
Traffic Control w/ Flaggers	2,420	LF	$ 12	$ 30,000	
				Construction Subtotal	***$ 2,087,000***
Additional Elements (estimated % of above)					
Mobilization and Administration			10%	$ 209,000	
Bonding			3%	$ 52,000	
Contractor Overhead and Profit			15%	$ 313,000	
Prevailing Wages			0%	$ -	
Contingency			30%	$ 626,000	
				Total Construction Subtotal	***$ 3,287,000***
Plans and Contract Documents					
Engineering Design and Bid Phase Services			12%	$ 394,000	
Engineering - Construction Contract Administration			4%	$ 131,000	
Engineering -- Inspection			4%	$ 131,000	
Permitting & Environmental			LS	$ -	
Geotechnical Investigation			LS	$ -	
Surveying			LS	$ 60,000	
Legal, Administrative, and Funding			2%	$ 66,000	
				Total Project Costs (rounded)	**$ 4,070,000**



The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Olympia Avenue Looping

Project Identifier: 3.7

Location: Olympia Avenue

Need for Project:
-AFF below 3,000 gpm at two hydrants
Objective:
-Upsize existing 6-inch pipe to 8-inches to improve AFF
Design Considerations:
- Additional hydrant testing should be conducted to assess available fire flow in this area.
- Alternative improvements should be considered. Modifications of pressure zones as discussed in Appendix X.2 may change the extent of this project.

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
8-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	280	LF	$ 170	$ 48,000	
Connect to Existing Water Main (6" & 8" Tapping Saddle and Valve)	3	EA	$ 8,000	$ 24,000	
6-inch Check Valve and Vault	1	EA	$ 25,000	$ 25,000	
Control Valve Vault Site Restoration	1	LS	$ 3,000	$ 3,000	
Concrete Surface Repair (Sidewalk, Curb and Gutter)	50	LF	$ 100	$ 5,000	
Roadway Restoration (Full Lane)	230	LF	$ 90	$ 21,000	
Traffic Control w/o Flaggers	280	LF	$ 10	$ 3,000	
				Construction Subtotal	***$ 129,000***
Additional Elements (estimated % of above)					
Mobilization and Administration			10%	$ 13,000	
Bonding			3%	$ 3,000	
Contractor Overhead and Profit			15%	$ 19,000	
Prevailing Wages			0%	$ -	
Contingency			30%	$ 39,000	
				Total Construction Subtotal	***$ 203,000***
Plans and Contract Documents					
Engineering Design and Bid Phase Services			20%	$ 41,000	
Engineering - Construction Contract Administration			4%	$ 8,000	
Engineering -- Inspection			4%	$ 8,000	
Permitting & Environmental			LS	$ -	
Geotechnical Investigation			LS	$ -	
Surveying			LS	$ 10,000	
Legal, Administrative, and Funding			2%	$ 4,000	
				Total Project Costs (rounded)	**$ 280,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Well Overhaul 2038

Project Identifier: 3.8

Location: Well Site

Need for Project:
- Preventative maintenance and replacement of well components

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
Biennial Well Overhaul	1	LS	$ 250,000	$ 250,000	
				Construction Subtotal	***$ 250,000***
				Total Project Costs (rounded)	**$ 250,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Colorado Street Upsizing

Project Identifier: 3.9

Location: Cougar Way

Need for Project:
-AFF below 3,000 gpm at multiple hydrants
Objective:
-Upsize existing pipes to 12-inch to improve fire flow.
Design Considerations:
- Additional hydrant testing should be conducted to assess available fire flow in this area.
- Alternative improvements for creation of a new pressure zone should be considered. See Appendix X.2 for more details.

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
12-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	850	LF	$ 200	$ 170,000	
Connect to Existing Water Main (10" & 12" Tapping Saddle and Valve)	3	EA	$ 12,000	$ 36,000	
Concrete Surface Repair (Sidewalk, Curb and Gutter)	230	LF	$ 100	$ 23,000	
ADA Ramp Reconstruction (Compliance)	1	EA	$ 5,000	$ 5,000	
Roadway Restoration (Full Lane)	370	LF	$ 90	$ 34,000	
Soil Surface Repair, Seeding, and Stabilization	250	LF	$ 10	$ 3,000	
Traffic Control w/o Flaggers	850	LF	$ 10	$ 9,000	
				Construction Subtotal	***$ 280,000***
Additional Elements (estimated % of above)					
Mobilization and Administration			10%	$ 28,000	
Bonding			3%	$ 7,000	
Contractor Overhead and Profit			15%	$ 42,000	
Prevailing Wages			0%	$ -	
Contingency			30%	$ 84,000	
				Total Construction Subtotal	***$ 441,000***
Plans and Contract Documents					
Engineering Design and Bid Phase Services			12%	$ 53,000	
Engineering - Construction Contract Administration			4%	$ 18,000	
Engineering -- Inspection			4%	$ 18,000	
Permitting & Environmental			LS	$ -	
Geotechnical Investigation			LS	$ -	
Surveying			LS	$ 20,000	
Legal, Administrative, and Funding			2%	$ 9,000	
				Total Project Costs (rounded)	**$ 560,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

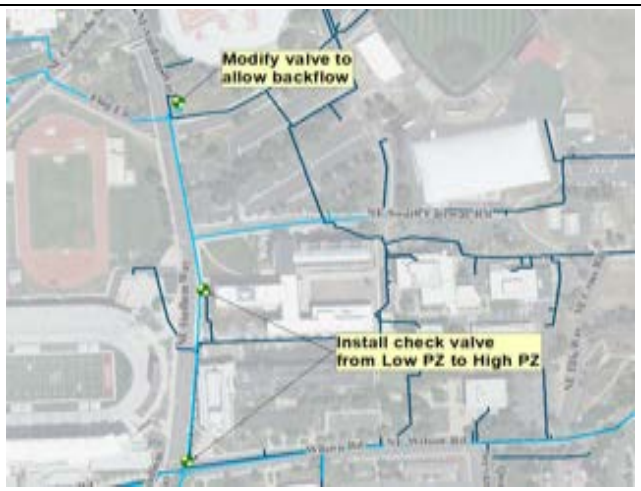
Project Title: Well Overhaul 2040

Project Identifier: 3.10

Location: Well Site

Need for Project:
- Preventative maintenance and replacement of well components

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
Biennial Well Overhaul	1	LS	$ 250,000	$ 250,000	
				Construction Subtotal	***$ 250,000***
				Total Project Costs (rounded)	**$ 250,000**



The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

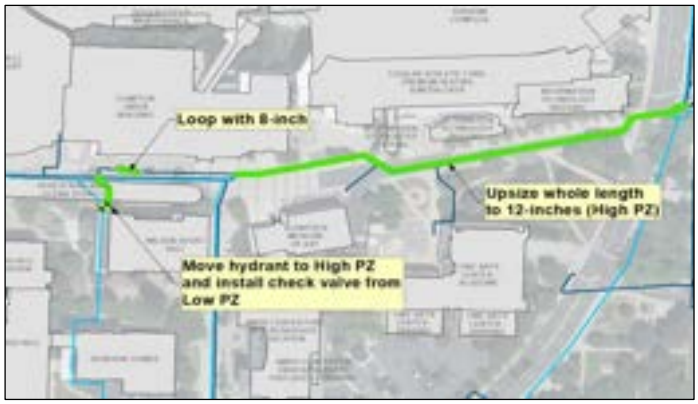
Project Title: Stadium Way Check Valves

Project Identifier: 3.11

Location: Stadium Way

Need for Project:
-AFF at Beasley Performing Arts Colosseum and Johnson Hall is below the required fire flow
Objective:
-Allow for backflow from the Low PZ to supplement fire flow
Design Considerations:
- Additional hydrant testing should be conducted to assess available fire flow in this area.
-Install check valves with bypass if pressure zone boundaries are modified in the future.
- Alternative improvements should be considered. Modifications of pressure zones as discussed in Appendix X.2 may eliminate the need for this project.
- Coordinate piping and surface repair on east side of Stadium Way with CIP 2.5 and 3.8

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
Modify Existing PRV with backflow	1	EA	$ 10,000	$ 10,000	
6-inch Check Valve and Vault	2	EA	$ 25,000	$ 50,000	
Control Valve Vault Site Restoration	1	LS	$ 3,000	$ 3,000	
Traffic Control w/o Flaggers	1	LS	$ 10,000	$ 10,000	
				Construction Subtotal	***$ 73,000***
Additional Elements (estimated % of above)					
Mobilization and Administration			10%	$ 7,000	
Bonding			3%	$ 2,000	
Contractor Overhead and Profit			15%	$ 11,000	
Prevailing Wages			0%	$ -	
Contingency			30%	$ 22,000	
				Total Construction Subtotal	***$ 115,000***
Plans and Contract Documents					
Engineering Design and Bid Phase Services			20%	$ 23,000	
Engineering - Construction Contract Administration			4%	$ 5,000	
Engineering -- Inspection			4%	$ 5,000	
Permitting & Environmental			LS	$ -	
Geotechnical Investigation			LS	$ -	
Surveying			LS	$ 5,000	
Legal, Administrative, and Funding			2%	$ 2,000	
				Total Project Costs (rounded)	**$ 160,000**



The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Stadium Way to Wilson Road Upsizing

Project Identifier: 3.12

Location: Wilson Road

Need for Project:
-AFF at Wilson Hall, Johnson Hall, Information Technology Building, and Johnson Tower lower than required fire flow
Objective:
-Upsize existing pipes and improve looping.
Design Considerations:
- Additional hydrant testing should be conducted to assess available fire flow in this area.
- Alternative improvements should be considered. Modifications of pressure zones as discussed in Appendix X.2 may eliminate the need for this project.
- Coordinate piping and surface repair on east side of Stadium Way with CIP 2.5 and 3.7

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
8-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	100	LF	$ 170	$ 17,000	
12-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	800	LF	$ 200	$ 160,000	
Connect to Existing Water Main (6" & 8" Tapping Saddle and Valve)	3	EA	$ 8,000	$ 24,000	
Connect to Existing Water Main (10" & 12" Tapping Saddle and Valve)	2	EA	$ 12,000	$ 24,000	
6-inch Check Valve and Vault	1	EA	$ 25,000	$ 25,000	
New 6-inch Hydrant Assembly	1	EA	$ 8,000	$ 8,000	
Control Valve Vault Site Restoration	1	LS	$ 3,000	$ 3,000	
Concrete Surface Repair (Sidewalk, Curb and Gutter)	350	LF	$ 100	$ 35,000	
ADA Ramp Reconstruction (Compliance)	2	EA	$ 5,000	$ 10,000	
Roadway Restoration (Full Lane)	550	LF	$ 90	$ 50,000	
Traffic Control w/o Flaggers	900	LF	$ 10	$ 9,000	
				Construction Subtotal	***$ 365,000***
Additional Elements (estimated % of above)					
Mobilization and Administration			10%	$ 37,000	
Bonding			3%	$ 9,000	
Contractor Overhead and Profit			15%	$ 55,000	
Prevailing Wages			0%	$ -	
Contingency			30%	$ 110,000	
				Total Construction Subtotal	***$ 576,000***
Plans and Contract Documents					
Engineering Design and Bid Phase Services			12%	$ 69,000	
Engineering - Construction Contract Administration			4%	$ 23,000	
Engineering -- Inspection			4%	$ 23,000	
Permitting & Environmental			LS	$ -	
Geotechnical Investigation			LS	$ -	
Surveying			LS	$ 25,000	
Legal, Administrative, and Funding			2%	$ 12,000	
				Total Project Costs (rounded)	**$ 730,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Systemwide Hydrant Improvements

Project Identifier: 3.13

Location: Systemwide

Need for Project:
-Several hydrants below 3,000 gpm throughout the system
Objective:
-Upsize existing pipes to meet the fire flow requirements
Design Considerations:
- Additional hydrant testing should be conducted to assess available fire flow in this area.
- Improvements only consider hydrants with AFF less than 2,500 gpm.
- Alternative improvements should be considered. Modifications of pressure zones as discussed in Appendix X.2 may change the extent of the project.

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
8-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	2,300	LF	$ 170	$ 391,000	
12-inch PVC Pipe - Excavation, Backfill, Valves, Fittings, Services	150	LF	$ 200	$ 30,000	
Connect to Existing Water Main (6" & 8" Tapping Saddle and Valve)	16	EA	$ 8,000	$ 128,000	
Connect to Existing Water Main (10" & 12" Tapping Saddle and Valve)	1	EA	$ 12,000	$ 12,000	
Concrete Surface Repair (Sidewalk, Curb and Gutter)	160	LF	$ 100	$ 16,000	
ADA Ramp Reconstruction (Compliance)	2	EA	$ 5,000	$ 10,000	
Roadway Restoration (Full Lane)	1,550	LF	$ 90	$ 140,000	
Soil Surface Repair, Seeding, and Stabilization	740	LF	$ 10	$ 8,000	
Traffic Control w/o Flaggers	2,450	LF	$ 10	$ 25,000	
				Construction Subtotal	***$ 760,000***
Additional Elements (estimated % of above)					
Mobilization and Administration			10%	$ 76,000	
Bonding			3%	$ 19,000	
Contractor Overhead and Profit			15%	$ 114,000	
Prevailing Wages			0%	$ -	
Contingency			30%	$ 228,000	
				Total Construction Subtotal	***$ 1,197,000***
Plans and Contract Documents					
Engineering Design and Bid Phase Services			12%	$ 144,000	
Engineering - Construction Contract Administration			4%	$ 48,000	
Engineering -- Inspection			4%	$ 48,000	
Permitting & Environmental			LS	$ -	
Geotechnical Investigation			LS	$ 20,000	
Surveying			LS	$ 40,000	
Legal, Administrative, and Funding			2%	$ 24,000	
				Total Project Costs (rounded)	**$ 1,530,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

Project Title: Well Overhaul 2042

Project Identifier: 3.14

Location: Well Site

Need for Project:
- Preventative maintenance and replacement of well components

General Line Item	Estimated Quantity	Unit	Unit Price	Item Cost (Rounded)	Total Cost (2022 Dollars)
Goods and Services					
Biennial Well Overhaul	1	LS	$ 250,000	$ 250,000	
				Construction Subtotal	***$ 250,000***
				Total Project Costs (rounded)	**$ 250,000**

The cost estimate herein is based on our perception of current conditions at the project location. This estimate reflects our opinion of probable costs at this time and is subject to change as the project design matures. Keller Associates has no control over variances in the cost of labor, materials, equipment, services provided by others, contractor's methods of determining prices, competitive bidding or market conditions, practices or bidding strategies. Keller Associates cannot and does not warrant or guarantee that proposals, bids, or actual construction costs will not vary from the cost presented

APPENDIX I

Chapter 9

APPENDIX I-1

Typical Invoices for Water Billings

Water usage in Fiscal Year 2022			$2.13/CCF			$2.13/CCF		$0.0056/gallon or $0.0208/GSF			$2.13/CCF	$2.13 for water, $3.36 for Sewer
Year/Month	Courtyard By Marriott Water usage (Gallons)	Water Usage in CCF	Billing	Marriot Residence Inn Water usage (Gallons)	Water usage in CCF	Billing	Housing water usage	Billing	Airport Actual charge (first 500 CF is free)	Meter fee	Total charge	CUB tenant (Water/Sewer) Total charge included meter fee

Cart Barn/etc. (Commercial) :	6,297	6,297	0

		Total Monthly Use (Gallons):	**13,008**
		Last Months Calendar Year Total Use (Gallons):	44,156,401
		Current Calendar Year Total Use (gallons):	**44,169,409**
		Calendar Year "Free" Water Allowance (Gallons):	48,000,000
		Calendar Year Billable Water Use (Gallons):	0
		Calendar Year Billable Water Use (100 Cu. Ft.):	0.00
		Monthly Billable Water Use (100 Cu. Ft.):	**0.00**
Commercial Portion (100 Cu. Ft.):	0.00	Irrigation Portion(100 Cu. Ft.):	0.00
Commercial Rate per 100 Cu. Ft. :	$2.56	Irrigation Rate per 100 Cu. Ft. :	$5.27
Commercial Base Charge:	$0.00	Irrigation Base Water Charge:	$0.00
		Total Base Charge:	$0.00
		Water Meter Charges:	$0.00
	8.7%	WSU Administration Charge:	$0.00
		Total Water Charge:	**$0.00**

Note: Water and Sewer charges reflect City of Pullman's winter water rate (decrease) and meter fees (increase).

Itemized Water Meter Locations and Fees

Location	*Water Service Type*	*Size*	*Monthly Meter Fee*
Irrigation Pond	*Irrigation*	*4"*	*$250.15*
Clubhouse	*Commercial*	*2"*	*$91.95*
North Comfort Station	*Commercial*	*1"*	*$38.25*
South Comfort Station	*Commercial*	*1"*	*$38.25*
Cart Barn/Ball Washer/Entry Irr.	*Commercial*	*11/2"*	*$61.80*
	Total Monthly Meter Charge:		*$480.40*

McCluskey Services Building, PO Box 641150, Pullman, WA 99164-1150

Phone: (509) 335-9029 Fax: (509) 335-9304

For questions on billed energy usage or rates, please contact:

Phil Johnson (509-335-9029)

Note: Conversion Factors: 1.0 Cu Ft = 7.48 Gallons; 100 Cu Ft = 748 Gallons

Note: Per Amendment 2 of the Lease, the Palouse Ridge Golf Course will be assessed water charges for each service point in accordance with the City of Pullman rates when the annual calendar year usage exceeds 48 million gallons.

Note: City of Pullman water rates can be viewed at the web address below:

http://www.pullman-wa.gov/departments/finance/utility-billing

APPENDIX J

Chapter 9

APPENDIX J-1

SEPA Checklist, DNS, Affidavit of Publication

Determination of Nonsignificance (DNS)

Description of Proposal: *2022 Domestic Water System Plan Update for Washington State University Pullman is proposed replacement for the 2015 WSU Water System Plan and associated 2018 amendment including Spill Farm as a Satellite System. The Water System Plan describes physical elements for the systems as well as maintenance and operation aspects. The plan considers anticipated needs for the next 20 years with recommended improvements through the year 2032. The plan also includes proposed additions and improvements to the system to accommodate future growth.*

Proponent: *Facilities Services- Capital*
Washington State University
Pullman, Washington

Location: All planned water system improvements for the Pullman Campus will be within the City of Pullman and/or Whitman County.

Lead Agency: *Washington State University*

The Lead Agency for this proposal has determined that it does not have a probable significant adverse impact on the environment. An Environmental Impact Statement (EIS) is not required, as provided for in RCW 43.21C.030(2)(c). This decision was made following the review of a completed Environmental Checklist and other information on file with the lead agency. This information is available to the public on request.

___ There is no comment period for this DNS.

√ This DNS is issued under WAC 197-11-340(2); the lead agency will not act on this proposal for at least 14 days from the date listed below. Comments must be submitted in written form and be received by the Responsible Official designated below by 4:00 PM, April 28, 2022.

Position/Title: *Olivia Yang, Associate VP, Facilities Services*

Address: *Washington State University*
Facilities Services
Post Office Box 643611
Pullman, WA 99164-3611

Telephone: *(509) 335-9024*

Date: *March 29, 2022*

WAC 197-11-960 Environmental checklist

Environmental Checklist

WSU Pullman Water System Plan Update

Washington State University

Pullman, WA

A. Background

1. Name of proposed project, if applicable:
   WSU Pullman Water System Plan Update

2. Name of applicant:
   Washington State University

3. Address and phone number of applicant and contact person:
   Jason Sampson
   Washington State University
   P.O. Box 641150
   McCluskey Services Building
   Pullman, WA 99164

   509-335-9564

4. Date checklist prepared:
   March 21, 2022

5. Agency requesting checklist:
   Facilities Services, Washington State University

6. Proposed timing or schedule (including phasing, if applicable):
   This proposal is for the update to the 2015 Water System Plan and associated 2018 amendment including Spillman Farm as a Satellite System.

7. Do you have any plans for future additions, expansions, or further activity related to or connected with this proposal? If yes, explain
   Yes, this plan will be updated every ten years in accordance with State law with and update being completed as previously scheduled with the current Water System Plan expiration date, June 29, 2022.

8. List any environmental information you know about that has been prepared, or will be prepared, directly related to this proposal:
   NA

9. Do you know whether applications are pending for governmental approvals of other proposals directly affecting the property covered by your proposal? If yes, explain.

No

10. List any government approvals or permits that will be needed for your proposal, if known

Washington State Department of Health

11. Give brief, complete description of your proposal, including the proposed uses and the size of the project and site. There are several questions later in this checklist that ask you to describe certain aspects of your proposal. You do no need to repeat those answers on this page. (Lead agencies may modify this form to include additional specific information on project description.).

The water system plan describes all the physical elements of the WSU Pullman Group A domestic water system, in addition to it's operations, maintenance, and future growth. The plan is completed in accordance with State Law. Maintenance activities and future growth include new installation and replacement of buried water lines, work associated with the wells and all the varied construction activities required (digging of trenches, backfill, asphalt, concrete, etc).

12. Location of the proposal. Give sufficient information for a person to understand the precise location of your proposed project, including street address, if any, and section, township, and range, if known. If a proposal would occur over a range of area, provide the range or boundaries of the site(s). Provide a legal description, site plan, vicinity map, and topographic map, if reasonably available. While you should submit any plans required by the agency, you are not required to duplicate maps or detailed plans submitted with any permit applications related to this checklist.

WSU Pullman Campus and Spillman Farm Satellite System

B. Environmental Elements

1. Earth

a. General description of the site (circle one): Flat, rolling, hilly, steep slopes, mountainous, other

b. What is the steepest slope on the site (approximate percent slope)?

Large variation across campus from 0-30%

c. What general types of soils are found on the site (for example, clay, sand, gravel, peat, muck)? If you know the classification of agricultural soils, specify them and note any prime farmland.

Predominantly silty clay loac. (Latah silt loam, Naff silt loam, Palouse silt loam, Palouse-Thatuna silt loam, Thatuna silt loam, Tucannon silt loam)

d. Are there surface indications or history of unstable soils in the immediate vicinity? If so, describe.

Some soils in the area are poorly drained and susceptible to frost heaving.

e. Describe the purpose, type, and approximate quantities of any filling or grading proposed. Indicate source of fill.

NA-This project does not involve construction, it is a written plan.

f. Could erosion occur as a result of clearing, construction, or use? If so, generally describe.

NA-This project does not involve construction, it is a written plan.

g. About what percent of the site will be covered with impervious surfaces after project construction (for example, asphalt or building)?

It is anticipated approximately 30% of the site will be impervious once all phases are complete. This includes the building and gravel surrounding the site.

h. Proposed measures to reduce or control erosion, or other impacts to the earth, if any:

NA-This project does not involve construction, it is a written plan.

2. Air

a. What types of emissions to the air would result from the proposal (i.e., dust, automobile, odors, industrial wood smoke) during construction and when the project is completed? If any, generally describe and give approximate quantities if know.

NA-This project does not involve construction, it is a written plan.

b. Are there any off-site sources of emissions or odor that may affect your proposal? If so, generally describe.

There are no known sources of off-site emissions.

c. Proposed measures to reduce or control emissions or other impacts to air, if any:

NA-This project does not involve construction, it is a written plan.

3. Water

a. Surface

1) Is there any surface water body on or in the immediate vicinity of the site (including year-round and seasonal streams, saltwater, lakes, ponds, wetlands)? If yes, describe type and provide names. If appropriate, state what stream or river it flows into.

Yes, Airport Road Creek flows through the eastern part of the campus. Paradise Creek and South Fork of the Palouse River are in the immediate vicinity. Also, there are numerous wetland areas throughout the campus.

2) Will the project require any work over, in, or adjacent to (within 200 feet) the described waters? If yes, please describe and attach available plans.

NA-This project does not involve construction, it is a written plan.

3) Estimate the amount of fill and dredge material that would be placed in or removed from surface water or wetlands and indicate the area of the site that would be affected. Indicate the source of fill material.

NA

4) Will the proposal require surface water withdrawals or diversion? Give general description, purpose, and approximate quantities if known.

NA.

5) Does the proposal lie within a 100-year floodplain? If so, note location on the site plan.

Yes, some of the WSU Pullman campus water system is within the 100-year flood plains for Airport Road Creek and South Fork of the Palouse River.

6) Does the proposal involve any discharges of waste materials to surface waters? If so, describe the type of waste and anticipated volume of discharge.

No.

b. Ground

1) Will ground water be withdrawn, or will water be discharged to ground water? Give general description, purpose, and approximate quantities if known.

All water is drawn from wells. The average annual water use for the Pullman campus is approximately 470 million gallons.

2) Describe waste material that be discharged into the ground from septic tanks or other sources, if any (for example: Domestic sewage, industrial, containing the following chemicals…;agricultural: etc.). Describe the general size of the system, the number of such systems, the number of houses to be served (if applicable), or the number of animals or humans the system(s) are expected to serve.

No waste material of any kind will be discharged into the ground from septic tanks or other sources.

c. Water runoff (including stormwater):

1) Describe the source of runoff (including storm water) and method of collection and disposal, if any (include quantities, if known). Where will this water flow? Will this water flow into other waters? If so, describe.

NA

2) Could waste materials enter ground or surface water? If so, generally describe.

NA

d. Proposed measure to reduce or control surface, ground, and runoff water impacts, if any:

NA-This project does not involve construction, it is a written plan.

4. Plants

a. Check or circle types of vegetation found on the site:

x_____deciduous tree: alder, maple, aspen, other
x_____evergreen tree: fir, cedar, pine, other
X_____shrubs
X_____grass
x_____pasture
x_____crop or grain
x_____wet soil plants: cattail, buttercup, bulrush, skunk cabbage, other
x_____water plants: water lily, eelgrass, milfoil, other
_____other types of vegetation

b. What kind and amount of vegetation will be removed or altered?

Any of the above, on limited basis, can be affected by construction and/or repair of the WSU water systems. Extensive efforts will be made to avoid the loss of any trees. All affected areas will be restored to their natural state as closely as possible following this installation.

c. List threatened or endangered species known to be on or near the site.

No threatened or endangered plant species have been identified on or near the campus.

d. Proposed landscaping, use of native plants, or other measures to preserve or enhance vegetation on the site, if any:

Areas affected will be replanted. WSU construction standards and practices will be followed.

5. Animals

a. Circle any birds and animals which have been observed on or near the site or are known to be on or near the site:

birds: hawk, heron, eagle, songbirds, other: magpies, pheasants, geese, duck, owls, crows, quail
mammals: deer, bear, elk, beaver, other: muskrat, skunk, porcupine, rabbits, squirrels, mice, coyotes, and occasional moose
fish: salmon, trout, herring, shellfish, other: minnows

b. List any threatened or endangered species known to be on or near the site.

No threatened or endangered plant species have been identified on or near the campus.

c. Is the site part of a migration route? If so, explain.

Not known.

d. Proposed measures to preserve or enhance wildlife, if any:

There are no measures being proposed to preserve or enhance wildlife.

6. Energy and natural resources

a. What kinds of energy (electric, natural gas, oil, wood stove, solar) will be used to meet the completed project's energy needs? Describe whether it will be used for heating, manufacturing, etc.

Electric energy is used for pumping, lighting, and heating at well houses and pumping facilities.

b. Would your project affect the potential use of solar energy by adjacent properties? If so, generally describe.

No

c. What kinds of energy conservation features are included in the plans of this proposal? List other proposed measures to reduce or control energy impacts, if any:

Use of high efficiency motors associated with pumping. Also, water conservation efforts reduce water consumption rates. Reduced consumption rates will reduce pump energy requirements.

7. Environmental Health

a. Are there any environmental health hazards, including exposure to toxic chemicals, risk of fire and explosion, spill, or hazardous waste, that could occur as a result of this proposal?

Exposure to gaseous chlorine may occur at the wellhead chlorination facilities. Also, exposure to hypochlorite when disinfecting water lines is possible.

1) Describe special emergency services that might be required.

Emergency services may require police, fire, and Environmental Health and Safety personnel to respond if an accident occurs.

2) Proposed measures to reduce or control environmental health hazards, if any:

Measures to reduce hazards are alarm systems at each wellhead chlorinator and use of personal protective equipment in case of leaks and spills. An Interagency agreement is in place to ensure a timely and coordinated response.

b. Noise

1) What types of noise exist in the area which may affect your project (for example: traffic, equipment, operation, other)?

None.

2) What types and levels of noise would be created by or associated with the project on a short term or a long term basis (for example: traffic, construction, operations, other)? Indicate what hours noise would come from the site.

Short term noise may occur as a result of maintenance activities.

3) Proposed measure to reduce or control noise impacts, if any:

As necessary restricted maintenance hours can be stipulated.

8. Land and shoreline use

a. What is the current use of the site and adjacent properties?

WSU is a land grant university, which includes teaching and research in various areas of study. Use of adjacent properties varies due to a variety of owners.

b. Has the site been used for agriculture? If so, describe.

Yes, test fields, pastures, and animal research.

c. Describe any structures on the site.

Residence halls, apartments, laboratories, classrooms, office buildings, animal facilities, and other buildings requiring water.

d. Will any structures be demolished? If so, what?

Not as part of this plan.

e. What is the current zoning classification of the site?

The Pullman campus is zones as "WSU" by the City of Pullman and Spillman Farm as "agriculture" by Whitman County.

f. What is the current comprehensive plan designation of the site?

The Pullman campus is zones as "WSU" by the City of Pullman and Spillman Farm as "agriculture" by Whitman County.

g. If applicable, what is the current shoreline master program designation of the site?

NA

h. Has any part of the site been classified as an "environmentally sensitive" area? If so, specify.

Yes – Airport Road Creek on the Pullman Campus has been designated as a wetland.

i. Approximately how many people would reside or work in the completed project?

All the students, faculty, and staff at WSU. The plan includes population projections.

j. Approximately how many people would the completed project displace?

None

k. Proposed measures to avoid or reduce displacement impacts, if any:

NA

l. Proposed measures to ensure the proposal is compatible with existing and projected land use and plans, if any:

None

9. Housing

a. Approximately how many units would be provided, if any? Indicate whether high, middle, or low income housing.

No housing of any type is proposed to be built in conjunction with this project.

b. Approximately how many units, if any, would be eliminated? Indicate whether high, middle, or low income housing.

NA

c. Proposed measures to reduce or control housing impacts, if any:

NA

10. Aesthetics

a. What is the tallest height of any proposed structure(s), not including antennas; what is the principal exterior building material(s) proposed?

No structures are planned.

b. What views in the immediate vicinity would be altered or obstructed?

No views will be obstructed.

c. Proposed measures to reduce or control aesthetic impacts, if any:

Proper design and coordination with university designers and affected persons.

11. Light and glare

a. What type of light or glare will the proposal produce? What time of day would it mainly occur?

None.

b. Could light or glare from the finished project be a safety hazard or interfere with views?

No.

c. What existing off site sources of light or glare may affect your proposal?

None.

d. Proposed measures to reduce or control light and glare impacts, if any:

None.

12. Recreation

a. What designation and informal recreational opportunities are in the immediate vicinity?

All are available on the WSU campus.

b. Would the proposed project displace any existing recreational uses? If so, describer.

No.

c. Proposed measures to reduce or control impacts on recreation, including recreation opportunities to be provided by the project or applicant, if any

None.

13. Historic and cultural preservation

a. Are there any places or objects listed on, or proposed for, national, state, or local preservation registers known to be on or next to the site? If so, generally describe.

Yes, various structures on the WSU campus.

b. Generally describe any landmarks or evidence of historic, archaeological, scientific, or cultural importance known to be on or next to the site.

Not known

c. Proposed measures to reduce or control impacts, if any:

As required or where necessary, all proper codes and standards related to historic and cultural preservation will be followed should construction activities potentially impact historic or cultural sites. The first option to be considered will be relocation of water system away from the site.

14. Transportation

a. Identify public streets and highways serving the site, and describe proposed access to the existing street system. Show on site plans, if any.

Refer to site maps within the plan.

b. Is site currently served by public transit? If not, what is the approximate distance to the nearest transit stop?

Yes

c. How many parking spaces would the completed project have? How many would the project eliminate?

None

d. Will the proposal require any new roads or streets, or improvements to existing roads or streets, not including driveways? If so, generally describe (indicate whether public or private).

No

e. Will the project use (or occur in the immediate vicinity of) water, rail, or air transportation? If so, generally describe.

No

f. How many vehicular trips per day would be generated by the completed project? If known, indicate when peak volumes would occur.

NA

g. Proposed measures to reduce or control transportation impacts, if any:

NA

15. Public Services

a. Would the project result in the increased need for public services (for example: fire protection, police protection, health care, schools, other)? Is so, generally describe.

No

b. Proposed measures to reduce or control direct impacts on public services, if any.

None

16. Utilities

a. Circle utilities currently available at the site: **electricity, natural gas, water, refuse services,** telephone, **sanitary sewer**, septic system, other: computer lines, storm sewer, steam

b. Describe the utilities that are proposed for the project, the utility providing the service, and the general construction activities on the site or in the immediate vicinity which might be needed.

NA

C. Signature

The above answers are true and complete to the best of my knowledge. I understand that the lead agency is relying on them to make its decision.
