## **ACKNOWLEDGEMENTS**

I wish to thank my advisor, Dr. Sophia Tegart, for her patience, support, and encouragement throughout my entire undergraduate degree program at Washington State University as this project would not have been possible without her.

Additional thanks to Dr. Aaron Hill, Dr. Greg Yasinitksy, Horace Alexander Young, and David Carson for providing sound fundamental training in music theory, performance, and appreciation throughout my continued personal and professional development.

## Précis

As an American art form, jazz music has historically been recorded, interpreted, and studied from an American perspective. Even though this attitude has not inherently impaired the message or value of the music, the internationalization of jazz starting in the mid-twentieth century has compelled some to question this viewpoint, stating that this approach has contributed to the emergence of several shortcomings regarding the history and current state of jazz music. As jazz has developed a strong international following in regions such as Western Europe, this American-centric perspective has only served to diminish the value of the musical contributions made by artists in this region to the international jazz lexicon. Although the twenty-first century has seen a rise in the visibility and representation of jazz musicians outside of the United States, these shortcomings and biases still persist to the detriment of the music. Interestingly, despite these concerns voiced by jazz musicians and audiences alike, little has been done to provide a platform for these international voices. It is in reaction to this passivity and necessity for research in the area of international jazz music that this thesis project was devised, intending to provide the visibility and critical acclaim that these Western European jazz musicians rightfully deserve.

Representing this diverse community of artists, Italian tenor saxophonist Max Ionata was chosen as the focus of this project based on his international reputation as one of the leading jazz musicians in Western Europe and his extensive discography that spans over two decades. Through the consultation and citation of several Western European musical and scholarly sources, including Ionata himself, the following provides a unique insight into the musical culture within Western Europe. In addition to this research, this thesis project features the transcription and analysis of several recordings of Ionata's playing, offering insight into the characteristics and techniques that define his improvisatory style. Following the analysis of

Ionata's recordings and identification of notable improvisatory techniques, the transcriptions were compared to other recordings by notable jazz musicians, including saxophonists Sonny Rollins, Dexter Gordon, and George Coleman. These comparisons aimed to illustrate Ionata's own connection and interpretation to the playing styles of established and respected musicians, demonstrating the value and legitimacy of jazz musicians such as Ionata and his contemporaries.

Only featuring a modest sum of testimonials, scholarly resources, and musical materials related to the contributions of Western European jazz musicians, the deficiency serves to highlight the shortcomings of an American-centric perspective of jazz music. As this thesis project exists as one of the first of its kind, it is the lasting objective of this work to provoke and inspire other musicians and scholars to investigate and develop this area of research, providing increased visibility and acclaim for historically underrepresented musical communities of Western Europe and abroad.

## Introduction and Literature Review

Originating in the Postbellum South, jazz music would first emerge in New Orleans, as musicians from African American, Caribbean, Haitian, Cuban, and Creole ancestry would combine elements of blues, ragtime, work songs, and other musical traditions associated with their respective cultures.<sup>1</sup> Initially considered a subgenre of ragtime music during the late-nineteenth century, jazz would begin to distinguish itself as an independent genre with its use of improvisational ornaments and solos over existing melodies and harmonic progressions.<sup>2</sup> This emphasis on musical improvisation was pioneered through the playing styles of musicians such as cornetist Buddy Bolden (1877-1931), clarinetist “Big Eye” Louis Nelson Delisle (1885-1949), and drummer Papa Jack Laine (1873-1966), all of whom have been credited by their contemporaries and successors as some of the first legitimate jazz musicians.<sup>2</sup>

Beginning in the early twentieth century, many jazz musicians who sought to distance themselves from the pervasive racial intolerance of the Jim Crow South, began migrating elsewhere.<sup>3</sup> With artists such as Jelly Roll Morton (1890-1941) and King Oliver (1881-1938) joining the Great Migration in search of a “better life and more tolerant society,” jazz music would reach new audiences and aspiring musicians in metropolitan centers such as Kansas City, Chicago, and New York City.<sup>3</sup> Establishing itself in American popular culture, jazz music thrived in the United States following the First World War. During this period, musicians and band leaders such as Coleman Hawkins (1904-1969), Benny Goodman (1909-1986), Duke Ellington

(1899-1974), and Count Basie (1904-1984) developed strong followings that would carry into the mid- to late-twentieth century.<sup>4</sup>

Apart from its popularity in the United States during this time period, jazz music also began to develop a strong international following, particularly in Western Europe. Since the mid-1940s following World War Two, many American jazz performers, listeners, advocates, and scholars emigrated to Western European countries such as the United Kingdom, France, Italy, and the Netherlands, seeking new opportunities and artistic liberties that were not available in the United States.<sup>5,6</sup> While this trend of North American jazz musicians relocating to Western Europe throughout the twentieth century has been thoroughly chronicled through various publishings, the same cannot be said regarding the domestic jazz scenes and musicians of the same region, especially in the twenty-first century. While amateur blog posts by professional musicians such as David Leibman (b. 1946) and memoirs and biographies of American jazz icons such as Chet Baker (1929-1988), Dexter Gordon (1923-1990), and Gerry Mulligan (1927-1996) intimately illustrate their experiences abroad, all fail to provide any insight into the native musicians or jazz culture of Western Europe.<sup>7,8,9,10</sup>

Apart from these personal recounts, further research into historical jazz literature and publishings describing the internationalization of jazz music brings to light additional biases and

shortcomings. Since jazz itself is an American art form, musicians, audiences, and scholars alike have continuously judged the musical value and purpose of any jazz music through an American lens.<sup>11</sup> It is due to this inherent perspective that several biases have developed. The neglect of European jazz ensembles, individual musicians, and the musical culture that exists outside of the United States is a direct result of these biases. This disregard can be observed with ensembles such as the Clarke/Boland Big Band, who at the time of their existence in the mid-twentieth century, were restricted to only performing in Europe due to their ensemble not following the current American jazz trends at the time. Additionally, other Western European jazz musicians, such as Polish trumpeter and composer Tomasz Stanko (1942-2018) and Norwegian saxophonist Jan Garbarek (b. 1947) have also failed to garner the same level of recognition as other American-based musicians, in part due to their lack of visibility with American audiences and scholars.

Encouragingly, the twenty-first century has seen a modest increase in the visibility of Western European jazz musicians and culture. According to writers such as Enzo Capua, this increase can be attributed to the “dramatic growth [in] skill and creativity” among European jazz musicians as well as the popularization of social media and video-sharing platforms, which have aided Western European jazz musicians such as Baptiste Herbin (b. 1988), Seamus Blake (b. 1970), and Francesco Cafiso (b. 1990) generate strong international followings.<sup>12</sup> Unfortunately, a lack of formal research into the contributions and significance of Western European jazz musicians continues to exist to the detriment of jazz historians and ethnomusicologists.

## **Thesis Activity**

It is the purpose of this thesis project to further expand on the Western European jazz lexicon as well as provide increased visibility to Western European jazz musicians in the professional and academic spheres through the transcription and analysis of improvised solos by Italian saxophonist Max Ionata. The analyses also aim to identify the musical influences and characteristics of Ionata's improvisational profile through interviews, transcription comparisons, and other miscellaneous factors.

## **Max Ionata: Biographical Information**

Despite Max Ionata's reputation as one of the leading Italian jazz tenor saxophonists in the contemporary scene, little public information exists regarding his career and upbringing compared to other prominent jazz musicians. Born in 1972 into a non-musical family that resided in a small village within the Abruzzo region of Italy, Ionata began playing the saxophone at the age of eight when he was offered a position in the community marching band.<sup>13</sup> Initially starting on soprano saxophone simply upon the marching band director's request, Ionata would not receive any formal musical instruction, instead choosing to casually "transcribe melodies from recordings" with "no idea how to improvise."<sup>13</sup> In Ionata's own words, having "lived in a little village in the middle [of the 1980s] meant [he] didn't have big [jazz] influences," with local live music performances only consisting of Italian folk or popular music.<sup>13</sup>

Into his teenage years, Ionata would continue to be almost entirely self-taught, stating in several interviews that the only competent musicians in the village were classical piano players

who were poorly suited to offer guidance that would be applicable to his musical aspirations.<sup>14</sup> Despite these challenges, Ionata would also learn to play the alto and tenor saxophones before auditioning at the *Conservatorio de Pescara* at the age of fourteen; although he was never admitted due to the saxophone professor insisting on a classically oriented curriculum.<sup>14</sup> Aside from these obstacles, Ionata's first exposure to jazz music would be through a childhood friend who lent him a cassette tape of tenor saxophonist Dexter Gordon's 1962 album *Go*, which he claims was his first significant musical inspiration.<sup>15</sup> Along with Dexter Gordon, Ionata has listed guitarist Mike Stern (b. 1953) and saxophonists Sonny Sitt (1924-1982), and Sonny Rollins (b. 1930) as some of his early musical influences.<sup>14</sup> But without any substantial performance or educational opportunities for jazz musicians in Abruzzo, Ionata gave up playing the saxophone for almost a decade.

During this period, Ionata took on several non-music-related occupations around Italy, including being a door-to-door salesman for what he described as an "electric duster product;" he has noted in several interviews that he never found any personal fulfillment in any of these occupations.<sup>14</sup> It was not until 1996 that Ionata decided to return to music and attempt to enter the professional music scene, as it was "the first love of his life."<sup>14</sup> Working in a factory full-time to provide for himself, Ionata recalls dedicating all of his other time to studying music and the jazz tradition.<sup>15</sup>

As in his childhood, Ionata chose to study independently, preferring to practice alone with recordings by saxophonists including George Coleman (b. 1935), Joe Lovano (b. 1952),

Jerry Bergonzi (1947), and Joe Henderson (1937-2001).<sup>16</sup> To supplement his personal studies, Ionata would receive informal guidance from other Italian jazz musicians such as saxophonist Rosario Giuliani (b. 1967) and various pianists, whom Ionata credits with aiding in his understanding of jazz harmony.<sup>16</sup> It would not be until the early 2000s that Ionata began to tour internationally with Italian pianist and composer Dado Moroni (b. 1961) in countries such as France and the Netherlands.<sup>16</sup>

Since then, Ionata has been awarded numerous outstanding soloist and artist awards throughout Europe and abroad while also appearing on over seventy albums as a leader and sideman. Apart from his European counterparts, Ionata has had the opportunity to share the stage with several other prominent American jazz musicians such as tenor saxophonists Joel Frahm (b. 1954), Bob Mintzer (b. 1953), and Steve Grossman (1951-2020); even performing with childhood influence Mike Stern.<sup>17</sup> Apart from his professional accolades, Ionata has accumulated a large international following on social media and video-sharing platforms such as YouTube, Instagram, and Facebook, with posts featuring his playing or transcriptions of his solos regularly generating tens to hundreds of thousands of views and interactions.<sup>18</sup> As an epitome of the twenty-first-century Western European jazz musician, Ionata has successfully defined his career outside of the American jazz lens while also honoring the tradition of the musical art form as it has been practiced throughout different regions of the world.

## Preliminary Analysis of Max Ionata Transcriptions

Praised by jazz critics for being able to combine the “foundational language of jazz improvisation from the past masters with his own individual laid-back feel,” Max Ionata’s improvisational approach is known to pull from many different facets of the jazz lexicon; as per his biographical information.<sup>19</sup> Considering the wide breadth of Ionata’s musical influences and knowledge, each of the four selected transcriptions aims to highlight different aspects of his playing through a variety of performance settings and repertoire choices. It should also be noted that each of the following transcriptions are not of recordings from Max Ionata’s official discography, but are instead live video recordings posted by Ionata on his personal YouTube Channel, offering a more organic performance and listening experience.

The four video recordings transcribed in this section include performances of (1) “All the Things You Are,” a medium swing jazz standard composed by Jerome Kern in 1939 that features unconventional chord progressions over an ABCA’ form; (2) “The End of a Love Affair,” an up-tempo jazz standard composed by Edward Redding in 1951 that uses a common AABA form; (3) “Without a Song,” a popular 1929 hard-bop composition by Vincent Youmans that also uses an AABA form; and (4) “Bolivia,” a 1976 Cedar Walton composition that alternates between a 16-measure up-tempo swing and 16-measure Afro-Cuban section.<sup>20,21,22,23</sup>

The following figures highlight some of the most common improvisatory techniques used by Ionata when improvising, organized into three categories: (1) Rhythmic Cells and Motivic

Variation, (2) Chromatic and Diatonic Enclosures, and (3) Diminished, Tritone, and Altered Substitutions.

### *Rhythmic Cells and Motivic Variation*

When improvising, jazz musicians often set up a phrase with a simple motive or rhythmic cell that is then developed throughout the solo. Known as motivic variation, composers and improvisers accomplish this through the use of techniques such as augmentation, where the established motive is presented using longer note values than previously used; diminution, the opposite of augmentation, where the established motive is instead presented using shorter note values; modulation, which is when an existing motive is transposed up or down scale degrees or to another key; and numerous other approaches related to the development of motivic figures. Throughout the preliminary analysis of the four selected transcriptions, Max Ionata was observed to use a variety of these techniques, including sequences, the use of five-note cells, and motivic development.

Figure 1.1 - Sequences in “End of a Love Affair” (M. 69-74)

The figure displays three staves of musical notation in G major. The first staff, measures 69-70, begins with a D major 7 chord. It features a melodic line starting with an unresolved enclosure (F#-G-A) on the first beat, followed by a sequence of notes: G, A, B, C, D, E, F#, G. The second staff, measures 71-72, continues the sequence with an E minor 7 chord, followed by A7, A minor 7, and D7 chords. The third staff, measures 73-74, concludes with A minor 7, D7, and G major 7 chords. The notation includes various note values, rests, and accidentals, illustrating the development of a motivic sequence.

As one of several examples of sequences in this recording, Figure 1.1 illustrates Max Ionata beginning a four-and-a-half measure phrase with an unresolved enclosure starting on beat

four of measure 69, anticipating the B minor chord in the succeeding measure. Using B melodic minor, the initial motive spans three beats before being transposed and rhythmically diminished in later iterations. In each of the following repetitions of the original motive, Ionata begins and ends each restatement with chord tones found within a G6 chord (G, B, D, and E), demonstrating his mastery of developing diatonic sequences over extended chord progressions.

Figure 1.2 - Five-Note Cells in “Without a Song” (M. 137-140)

In this excerpt shown in Figure 1.2, Ionata can be found repeatedly superimposing a five-note rhythmic figure over a 4/4 time signature, where either two- or four-note cells would be customary. A more contemporary improvisatory technique, the use of a five-note cell over a quadruple-meter creates rhythmic tension, propelling the individual phrase and entire solo forward.

Apart from the rhythmic tension created, the phrase also features a great amount of chromaticism which is commonly used by jazz improvisers to produce harmonic tension. However, while each of the cells in this example use chromaticism, Ionata still clearly outlines the chord tones and upper extensions of each chord in the progression. Specifically, Ionata outlines the tonic and third (F and A) over the F major chord; the tonic fifth, thirteenth, and dominant seventh (F, C, D, Eb) approaching and over the F7 chord; as well as the tonic and augmented ninth over the Bb major chord. This passage in particular demonstrates Ionata’s attentiveness and consideration when creating harmonic and rhythmic tension within his solos.

Figure 1.3 - Motivic Development in “Bolivia” (M. 133-148)

The image shows four staves of musical notation in treble clef. The first staff starts at measure 133 with an A13 chord symbol above the first note. The melody begins with a half note G4, followed by quarter notes A4 and B4, and a quarter rest. The second staff starts at measure 137 with an A13 chord symbol. The melody continues with quarter notes B4, A4, G4, and F#4. The third staff starts at measure 141 with an A13 chord symbol. The melody continues with quarter notes E4, D4, C#4, and B4. The fourth staff starts at measure 145 with an A13 chord symbol. The melody continues with quarter notes A4, G4, F#4, and E4, then moves to a higher register with quarter notes G5, F#5, E5, and D5.

Similar to the first example in Figure 1.1, Figure 1.3 demonstrates Ionata’s ability to develop simple motives into, in this case, an extended sixteen-measure phrase using motivic development. While this method of melodic variation is not as explicit as other techniques, being that motivic development can be achieved through various means, this excerpt in particular displays Ionata’s ability to manipulate a simple diatonic motive over the course of the A13 vamp in the B section of the composition “Bolivia.”

Starting on beat four of measure 134, Ionata plays a descending line using the first four notes of the E minor pentatonic scale (E, G, A, and B), which in this case also outline the ninth, tonic, dominant seventh, and fifth of the A13 chord, in that order. With the initial motive ending on the off-beat of beat three in measure 135, the line is quite simple, being repeated and rhythmically diminished in following iterations in measures 137-139. The motive is then transposed up a whole step in measures 140-142, now outlining an F# minor pentatonic scale, and repeated several times before Ionata extends the line leading into the A section. This phrase

serves to highlight Ionata’s ability to synthesize several techniques associated with motivic variation with great effect.

### *Chromatic and Diatonic Enclosures*

Enclosures, a technique commonly used by jazz improvisers throughout the history of the music, utilize a combination of upper and lower diatonic and/or chromatic leading tones to “enclose” a target note. Appearing in two forms, enclosures can be used to approach a note either diatonically, that is, only using notes from the tonic key, or chromatically, choosing to utilize leading tones that are within a half-step of the targeted note. At times used as cadence within an improvisatory phrase, such as the case with most diatonic enclosures, this technique is also often used as an exercise when outlining chord progressions through enclosing chord tones.<sup>24</sup>

Figure 2.1 - Diatonic Enclosures in “Bolivia” (M. 237-244)

Beginning in measure 240 of Figure 2.1, Ionata uses a diatonic enclosure with the notes C# and A to enclose the ninth scale degree, B, of the A13 chord. The same enclosure is then played again in the following measure with the same rhythmic placement. Although simple in nature, this enclosure highlights the upper extensions of the chord, providing more tonal color and harmonic tension to the overall phrase.

<sup>24</sup> Vaartstra, Brent. “How to Use Enclosure in Your Jazz Solos.” Learn Jazz Standards, July 15, 2016.

Figure 2.2 - Chromatic Enclosures in “All the Things You Are” (M. 25-32)

The image displays two staves of musical notation in G major, measures 25 through 32. The first staff (measures 25-28) features chords Cmin7, F7, Bbmaj7, Aø7, and D7(b9). The second staff (measures 29-32) features chords Gmin7, Cmin7, F7, and Bbmaj7. Chromatic enclosures are indicated by brackets and the number '3' below the notes. In measure 27, a chromatic enclosure targets the third of the A half-diminished chord (middle C) on the downbeat. In measure 31, another chromatic enclosure targets the third of the F7 chord (A) on beat three. Other enclosures are diatonic.

Within this eight-measure phrase shown in Figure 2.2, Ionata plays seven different enclosures, two of which are chromatic with the rest being diatonic. The first chromatic enclosure begins on the fourth beat of measure 27 as the Db and B natural act as chromatic upper and lower leading tones targeting the third of the A half-diminished chord, being a middle C, on the downbeat of the anticipated measure. Similarly, the other chromatic enclosure in this example targets the third of the F7 chord in measure 31, with the Bb and G# acting as the diminished and augmented leading tones approaching the A on beat three. Altogether, these diatonic and chromatic enclosures feature Ionata’s thoughtful anticipation of chord tones as he flawlessly outlines the unconventional harmonic progression of this Jerome Kern jazz standard.

### *Diminished, Tritone, and Altered Substitutions*

Used by various hard-bop and avant-garde jazz musicians starting in the mid-twentieth century, diminished, tritone, and altered substitutions over dominant chords have become rather popular. These substitutions superimpose harmonically compelling extensions that provide tonal color and dissonance. While there are a variety of ways to convey these substitutions, many improvisers choose to simply superimpose the substituted scale, often in its entirety, to convey the desired harmonic sound clearly. Other methods include arpeggiation or the use of open

intervals to outline the chord tones of the substitution, which are equally as effective if used appropriately.

When implying a diminished substitution, jazz musicians utilize the half-whole-step mode which contains the following eight diatonic scale degrees and extensions: tonic, diminished ninth, augmented ninth, third, augmented eleventh, fifth, thirteenth, and dominant seventh. Alternatively, improvisers may choose to superimpose a key that is a tritone, or three whole steps, away from the existing chord, also known as a tritone substitution. Finally, the altered scale may also be used, which contains seven diatonic scale degrees and extensions: tonic, diminished ninth, augmented ninth, third, augmented eleventh, diminished thirteenth, and dominant seventh. Of these substitutions, all three are most commonly used over dominant chords that resolve to a tonic, or in other words, a V7-I progression, which is the case in the following three figures.

Figure 3.1 - Diminished Substitutions in “All the Things You Are” (M. 33-36)

Similar to the following two examples in this section, Figure 3.1 outlines a substitution that only occurs for the duration of a single measure. Beginning in measure 34 of the excerpt, Ionata superimposes an A half-whole-step diminished scale, outlining the tonic, diminished ninth, and augmented ninth before arpeggiating an A major triad in first inversion. Despite the harmonic progression outlining a ii7-V7-I cadence in D major, Ionata implies the A or V7 tonality over the entire ii7-V7-I progression, superimposing the diminished scale over the course of the entire measure. Serving as a typical example of a diminished substitution, this excerpt also

demonstrates Ionata’s advanced harmonic palette with the superimposition of a dominant tonality over an extended harmonic progression.

Figure 3.2 - Tritone Substitutions in “Without a Song” (M.117-120)

Although tritone substitutions can be conveyed in a variety of ways, Ionata most often chooses to utilize the major pentatonic scale of the tritone. In Figure 3.2, over an F7 chord, Ionata superimposes the first four notes of the B major pentatonic scale beginning on the fifth in measure 118. Despite the substitution being brief, quickly resolving to the third of the Bb major chord in the succeeding measure, this example highlights Ionata’s tasteful yet explicit use of tritone substitutions over a V7-I cadence.

Figure 3.3 - Altered Substitutions in “Without a Song” (M. 121-124)

As is the case with this example in Figure 3.3, altered scales are typically played diatonically descending to a resolving chord tone to clearly outline the superimposed tonality. Starting in measure 121, Ionata begins to descend the C-altered scale starting on an Ab (the diminished sixth). Although the scale is not played in its entirety, Ionata still outlines all four of the augmented extensions within the scale which include the diminished sixth, diminished fifth, diminished third, and diminished ninth, before resolving to a C in measure 125, the fifth of the F6 chord that is being anticipated (not seen in the figure).

## **Transcription Comparison & Analysis**

Following the preliminary analysis, which identified various improvisatory techniques used by Max Ionata that characterize his unique approach to jazz improvisation, this section will attempt to associate each of these techniques with other prominent jazz musicians. The purpose of this comparison will be to connect each of the three identified categories with other jazz musicians and recordings that Ionata has cited as having a significant influence on his playing. These comparisons and connections with other established American jazz improvisers will aid in developing a more comprehensive and definitive characterization of Ionata's improvisatory approach.

Out of the numerous jazz musicians that Ionata credits with having a profound influence on his playing, Sonny Rollins, Dexter Gordon, and George Coleman, in particular, are each known for their use of motivic variation, enclosures, and use of diminished, tritone, and altered substitutions, respectively. Throughout several interviews covering Ionata's musical development, Rollins, Gordon, and Coleman came up multiple times as having a significant influence on Ionata's vocabulary, phrasing, and use of harmonic dissonance.

Of the countless recorded performances each of these musicians have released during their careers, the following four recordings were selected for transcription and analysis based on their significance and representation of that artist's distinctive improvisatory style: (1) "St. Thomas," a 16-measure calypso composed and recorded by Sonny Rollins in 1957; (2) "Lady Bird," a 16-measure up-tempo jazz standard composed by Tadd Dameron in 1948 and performed, in this case, by Dexter Gordon in 1964; (3) "Blues Inside Out," a 12-measure Bb jazz blues composed and performed by George Coleman in 1977; and (4) "On a Clear Day," a 1947

Buton Lane composition that features an AABA' form, performed by George Coleman and the Wynton Kelly Trio in 1968.<sup>25,26,27,28</sup>

The following comparisons will cover the same three categories discussed in the preliminary analysis, this time comparing the three techniques with the selected recordings that feature Rollins, Gordon, and Coleman.

### *Rhythmic Cells and Motivic Variation - Sonny Rollins Comparison*

Known for his “singable melodies with simple harmonies which allow [for] the freedom to improvise variations,” Sonny Rollins’ ability to develop motives throughout his solos has been praised by his contemporaries and successors, including Ionata.<sup>29</sup> When comparing examples of motivic development in Ionata’s solo on “Without a Song” with Rollins’ solo on “St. Thomas,” many rhythmic and stylistic similarities emerge.

Figure 4.1.1 - Max Ionata’s Use of Motivic Development in “Without a Song” (M. 277-284)

The image shows two staves of musical notation in G-flat major. The first staff (measures 277-284) contains a melodic line with the following chord changes: F<sup>b</sup>, G<sup>min7</sup>, C<sup>7</sup>, A<sup>min7</sup>, D<sup>7</sup>, G<sup>min7</sup>, and C<sup>7</sup>. The second staff (measures 281-284) continues the melodic line with chord changes: F<sup>maj7</sup>, F<sup>7</sup>, B<sup>b</sup>maj<sup>7</sup>, and E<sup>b</sup>7. The notation includes eighth and quarter notes, rests, and a final double bar line.

<sup>25</sup> Sonny Rollins, St. Thomas, 1957.

<sup>26</sup> Dexter Gordon, Lady Bird, 1964.

<sup>27</sup> Elvin Jones and George Coleman, Blues inside Out, 1977.

<sup>28</sup> Wynton Kelly Trio and George Coleman, On a Clear Day, 1968.

<sup>29</sup> Charley Gerard, Jazz Masters: Sonny Rollins, 41.

Figure 4.1.2 - Sonny Rollins' Use of Motivic Development in "St. Thomas" (M. 1-16)

In both examples, Ionata and Rollins begin the phrase with a three-note and two-note cell, respectively, which are then developed through the manipulation of the upper or lower neighbor tones. In Figure 4.1.1, Ionata begins the phrase in the pickup to measure 278 with a three-note cell comprised of the notes F, C, and F. Acting as an upper neighbor tone, the C is raised by a half-step throughout every repetition in the sequence, eventually ending on an Eb in measure 280. Similarly, in Figure 4.1.2, Rollins begins the first phrase of his solo with a two-note cell comprised of an A and a D in the first measure. While the D does not act as a lower neighbor to the A, it too, like the upper neighbor used in Ionata's three-note cell, is raised by a half step throughout the sequence in the first four measures; the same variation occurring in the second four-measure system. Both examples not only demonstrate similarities in their approach to motivic variation, but stylistic tendencies as well.

*Chromatic and Diatonic Enclosures - Dexter Gordon Comparison*

As stated by Ionata in several interviews, Dexter Gordon served as one of his earliest and most significant musical influences as a child living in Abruzzo. Revered for his extensive knowledge and invention of jazz vocabulary, Gordon's phrases largely consisted of diatonic eighth-note lines that often featured enclosures which served to extend the phrase and highlight chord tones. Although the general use of enclosures is not unique to any single musician, the comparison of Ionata's solo on "All the Things You Are" with Gordon's "Lady Bird" demonstrates their shared ability to use enclosures to extend phrases across multiple measures.

Figure 5.1.1 - Max Ionata's Use of Enclosures in "All the Things You Are" (M. 61-68)

The musical notation for Figure 5.1.1 consists of two staves of music in G minor. The first staff (measures 61-64) shows a melodic line with enclosures. Chord symbols above the staff are Cmin7, F7, Bbmaj7, Aø7, and D7(b9). The second staff (measures 65-68) continues the line, featuring a prominent chromatic enclosure in measure 65. Chord symbols above the staff are Gmin7, Cmin7, F7, and Bbmaj7. Trill ornaments (trills) are indicated above notes in measures 67 and 68.

Figure 5.1.2 - Dexter Gordon's Use of Enclosures in "Lady Bird" (M. 81-88)

The musical notation for Figure 5.1.2 consists of two staves of music in D major. The first staff (measures 81-84) shows a melodic line with enclosures. Chord symbols above the staff are Dmaj7, Gmin7, and C7. The second staff (measures 85-88) continues the line, featuring a prominent chromatic enclosure in measure 85. Chord symbols above the staff are Dmaj7, C#min7, F#7, Cmin7, and F7. Trill ornaments (trills) are indicated above notes in measures 87 and 88.

While each excerpt contains multiple examples of chromatic and diatonic enclosures, both Ionata and Gordon use descending chromatic enclosures that extend the overall phrase and highlight passing chord tones. In Figure 5.1.1 starting in measure 65, Ionata uses an extended chromatic enclosure, using three upper and lower leading tones to target the root of the chord.

Starting on beat one of the measure, Ionata begins the enclosure with a B $\flat$ , serving as an upper leading tone, before continuing the phrase with an F and F $\sharp$  as lower leading tones, and completing the enclosure with an A, A $\flat$ , and second F $\sharp$  to target the G, the root of the G minor chord. Similarly, Figure 5.1.2 illustrates a similar example beginning on measure 84, where Gordon begins an enclosure on the third of the C7 chord, E, starting on beat two. Serving as the target note, the E also acts as the upper neighbor in the second enclosure, this time targeting the root of the anticipated D major chord. While either of these enclosures could have been accomplished with a three-note cell comprised of a single upper and lower neighbor, Ionata and Gordon both compose extended enclosures that propel each phrase through their respective harmonic progressions.

#### *Diminished, Tritone, and Altered Substitutions - George Coleman Comparison*

Cited by his contemporaries, students, and listeners alike as one of the earliest and most prominent innovators of diminished, tritone, and altered substitutions in jazz improvisation, George Coleman has even been recognized by Max Ionata as being one of the primary influences of his harmonic palette. While the execution of diminished substitutions varies widely, the comparison of Ionata's solos on "Without a Song" and "All the Things You Are" with Coleman's solos on "Blues Inside Out" and "On a Clear Day" illustrate clear similarities in their use of tritone and altered substitutions over dominant chords.

Figure 6.1.1 - Max Ionata's Use of Tritone Substitutions in "Without a Song" (M. 169-172)

Figure 6.1.2 - George Coleman's Use of Tritone Substitutions in "Blues Inside Out" (M. 157-160)

As identified in the preliminary analysis, Ionata often uses the major pentatonic scale of the tritone to outline the substitution. In the same way as Figure 3.2, Figure 6.1.1 illustrates Ionata superimposing the first four notes of the B major pentatonic scale over an F7 chord in measure 170 before, this time, resolving to the eleventh scale degree of the anticipated Bb major chord. Similarly, Figure 6.1.2 shows Coleman also outlining the first four notes of the F# major pentatonic scale, being the tritone of C major, the key "Blues Inside Out" is set in. While the substitutions are brief, the two excerpts illustrate a clear similarity in the outlining of tritone substitutions between Ionata and Coleman.

Figure 6.2.1 - Max Ionata's Use of Altered Substitutions in "All the Things You Are" (M. 121-124)

Figure 6.2.2 - George Coleman's Use of Altered Substitutions in "On a Clear Day" (M. 145-148)

In both figures, Ionata and Coleman superimpose an altered tonality by playing the scale in descending succession. While Figure 6.2.2 shows Coleman beginning the descending line on the off-beat of beat one in measure 146 before resolving to the dominant seven of the succeeding

C major chord, Figure 6.1.1 demonstrates Ionata's sparser approach. Alternatively, Ionata chooses to outline the following extensions in descending succession starting on beat two of measure 124, as opposed to playing the scale outright: dominant seventh, diminished sixth, diminished fourth, diminished ninth, and tonic. Resolving to the third of the anticipated G minor chord (not seen in the figure), Ionata's altered substitution still outlines the guide tones of the D7 chord (F# and C) while also using two of the four altered extensions to imply the superimposed tonality (diminished ninth and diminished sixth). Although the general use of altered substitutions is commonplace in contemporary jazz improvisation, the similar use of descending successions of the scale over dominant chords at the end of harmonic progressions suggests Coleman's influence on Ionata's harmonic cadences over traditional chord progressions.

## **Conclusions**

The initial transcription and analysis of the four selected recordings have revealed numerous identifiable stylistic traits and musical influences that define Max Ionata's improvisational profile. Either by choice or necessity, Ionata's emphasis on independent musical study enabled him to develop a unique approach to jazz improvisation that combines traditional bebop vocabulary with contemporary improvisatory methods. Through the use of improvisatory techniques such as rhythmic cells and motivic variation, chromatic and diatonic enclosures, or diminished, tritone, and altered substitutions, Ionata's extensive knowledge and tasteful application of various improvisatory techniques only serve to validate his status as one of the leading jazz tenor saxophonists in the contemporary scene, regardless of nationality.

Additionally, the comparison of Ionata's improvisational solos with recordings of other prominent jazz musicians also serves to establish legitimate connections with the artists that he mentions in various interviews, further illustrating Ionata's deep ongoing appreciation and

respect for the jazz tradition. Referencing improvisatory techniques such as Sonny Rollins' mastery of motivic variation, Dexter Gordon's use of enclosures within phrases, and George Coleman's treatment of harmonic substitutions over conventional chord progressions, Ionata has demonstrated the unique ability to synthesize the improvisational vocabulary and approaches that have defined other subgenres of jazz music while simultaneously providing his own personal interpretation of traditional and contemporary jazz literature.

However, by no means are these comparisons meant to reduce Ionata's improvisational profile to the recurring use of common improvisatory techniques or a disingenuous imitation of other jazz artists. Rather, these examples were chosen to highlight Ionata's virtuosic command of the saxophone in a jazz setting. The intent of these comparisons are to contextualize and commend Ionata's playing using materials that were already regarded to possess a high level of musical value. Outside of their musical significance, the additional transcriptions themselves were carefully chosen as the most applicable comparisons to Ionata's own playing based on the information that has been provided to the public regarding his musical development. As transcription analyses and comparisons are often scrutinized for only offering a restricted perspective of an individual's playing style, the body of transcriptions in this project aimed to represent a diverse selection of improvisatory techniques, performance settings, artists, and musical influences, ensuring that the culminating determinations of this project embodied a sincere and comprehensive perspective of Ionata's improvisatory style as well as jazz music as a whole.

While it could be argued that these analyses and comparisons were subjected to American artistic biases regarding jazz improvisation and musical value, the research process did succeed in highlighting the perspectives and musical contributions of Western European jazz musicians

through the consideration and citation of interviews, news articles, and video recordings created by non-American scholars, writers, and musicians. Historically underrepresented, the research presented in this thesis project displays the value of these international voices and their unique contributions to jazz music. Regardless of these potential criticisms, the collection of these resources exists as one of the first academic compositions that provides insight into Western European jazz music in the twenty-first century. Serving as an avenue for which American jazz audiences may connect with the playing styles of Western European jazz musicians, including Ionata, this thesis project aims to provoke and inspire other scholars to investigate and develop this area of study. Though research in this discipline is admittedly slow-going, the growth of this field ushers the promise of providing increased visibility to a region of the world that has been historically undeservingly underrepresented in so many facets of musical visibility, notoriety, and scholarship.

Having flourished to become one of the most popular international art forms since its creation nearly a century and a half ago, jazz music has succeeded in touching the lives of countless musicians and listeners alike, offering a unique outlet that continues to push the boundaries of artistic expression by musicians around the world. As an international art form, it is the responsibility of its participants to champion the voices that make this music so unique and personal, regardless of any demographic differences that exist among audience members. Art, in its various forms, continues to serve as a medium through which societies may communicate, heal, and connect; and for that, it must be experienced, nurtured, and celebrated by all, regardless of its origin.
