#### FELINE DECLAW AND TENOTOMY

Problems/Diagnosis/Procedure:

Exercise:

Unlimited       Limited     None

Diet:

Normal       Special

Instructions:

Your animal was declawed had a tenotomy on \_\_\_\_\_.

There were no complications with either anesthesia or surgery and your cat is recovering nicely. Please call us if there are any signs of coughing, vomiting, sneezing, depression, poor appetite or swelling or discharge from the toes. Also watch for limping in excess of 7 days, and/or painful or hot to the touch. If any of these symptoms arise, please do not hesitate to phone us. Please confine your cat and use shredded paper instead of litter in the litterbox for 7-10 days. Your pet may resume normal activity 7-10 days after surgery.
