A Biopsychosocial Perspective on Infant Emotion and Cognition

Dr. Martha Ann Bell

Infant development is complex; consequently, infant research requires a multi-level approach. In this talk, I will discuss results from our longitudinal study on the foundations of regulatory emotion and cognition processes. I will highlight our EEG power/coherence research and emphasize the value of considering the parenting context in any study of infant development.

When: *Thursday, October
18, 1:30-3:00 pm*

Where: *Veterinary and
Biomedical
Research Building
(VBR) 305*

Open to All: *Anyone can attend*

Dr. Martha Ann Bell currently works at the Department of Psychology, Virginia Tech. Martha Ann's research is in Developmental and Biological Psychology.
