

**2012 Pacific Madrone
Site Assessments**

ID tag

0 = missing

1 = ID OK

Plant Condition

1 = alive

2 = dieback

3 = wilting

4 = dead

5 = missing

Total ht (cm): total height of sdlg

leaders: 1 is default

br11 and # br12: # of branches originating from 2011 and 2012 buds, respectively

new gr: Active new growth on terminals

0 = none (default)

1 = present

basal sprouts: upright shoots

0 = none (default)

1 = present

foliage color

1 = green (default)

2 = reddish-green

Vigor

1 = partially dead top w/ lower live sprouts

2 = Limited 2012 growth [< 5 cm (2")]

3 = Moderate 2012 growth [5-15 cm (2- 6")]

4 = Good 2012 growth [15-45 cm (6-18")] with some branches

5 = Excellent 2012 growth [>45 cm (18")] with multiple well developed branches

blight sev: severity of symptoms on most severely impacted current season leaf

0 = none

1 = slight ($<25\%$ of leaf area affected)

5 = moderate (25 to 50% of leaf area affected)

25 = severe ($>50\%$ of leaf area affected)

blight inc: whole tree

1 = <25 of leaves with severity rating

2 = 25-50% of leaves

3 = 51-75% of leaves

4 = $>75\%$ of leaves

Comments

1 = leaf rust present

2 = chewing insect damage present

3 = variegated foliage present

4 = browse damage evident

5 = Burrowing varmint activity around tree

6 = other
