

ENERGY & COMFORT @ WSU

ARE YOUR ELECTRONIC DEVICES TURNED OFF?

If you are using your Smart Power Strip (SPS) outside of your typical schedule and your electronic devices are not turned on, then your timer may not be activated: this is because it is beyond the strip's programmed hours of operation.

If this is the case, you can override the program and turn on or off the timer by pressing the **Manual** button once. This action temporarily overrides the programming but is reversed upon the next scheduled on/off cycle.

If the screen reads 'MANUAL' instead of 'AUTO' like the image here, press and hold the Manual button until 'AUTO' is restored. This may take up to 4 seconds.

If there are any questions or concerns with activating/deactivating the timer, email Zachary Colligan at Zach.Colligan@wsu.edu
